Chart Your Way To Profits Simon and Schuster

A practical guide to profiting from institutional trading trends The key to being a successful trader is finding a system that works and sticking with it. Author Al Brooks has done just that. By

simplifying his trading system and trading only 5-minute price charts he's found a way to capture profits regardless of market direction or economic climate. His first book, *Reading Price Charts Bar by Bar*, offered an informative examination of his system, but it didn't allow him to get into the real nuts and bolts of the approach. Now, with this new series of books, Brooks takes you step by step through the entire process. By breaking down his trading system into its simplest pieces: institutional piggybacking or trend trading (the topic of this particular book in the series), trading ranges, and transitions or reversals, this three book series offers access to Brooks' successful methodology. *Price Action Trends Bar by Bar* describes in detail what individual

bars and combinations of bars can tell a trader about what institutions are doing. This is critical because the key to making money in trading is to piggyback institutions and you cannot do that unless you understand what the charts are telling you about their behavior. This book will allow you to see what type of trend is unfolding, so can use techniques that are specific to that type of trend to place the right trades. Discusses how to profit from institutional trading trends using technical analysis Outlines a detailed and original trading approach developed over the author's successful career as an independent trader Other books in the series include Price Action Trading Ranges Bar by Bar and Price Action Reversals Bar by Bar If you're looking to make the most of your time in

today's markets the trading insights found in Price Action Trends Bar by Bar will help you achieve this goal.

#### Mechanical Trading Systems Elsevier

It also provides a detailed examination of the personality traits common to the three basic types of trader - trend-following (long to intermediate term), mean reversion (intermediate-term), and short-term (swing and day traders) - and illustrates how a strict adherence to specific types of trading systems can foster a psychological flexibility that will allow you to succeed in all kinds of trading environments: countertrending, choppy, or trending."--Jacket.

An effective way to reverse a trade's

fortune Almost all trading books focus on "winning" trades. But winning trades can be hard to come by, especially when you're just starting out. *Turning Losing FOREX Trades into Winners* takes a look at this discipline from a different angle, examining effective methods for dealing with trades that are in a losing position. First, it guides the trader through the various steps of determining if a trade is with or against the overall trend. Then, it explains how to decide when a trade should be closed or left open. While this reliable resource is filled with in-depth insights and expert advice that will help readers gain a better understanding of today's FOREX market, it also contains hundreds of chart examples that will provide step-by-step instructions on how traders can recover from losses.

#### Trading at the Speed of Light McGraw Hill Professional

A remarkable look at how the growth, technology, and politics of high-frequency trading have altered global financial markets. In today's financial markets, trading floors on which brokers buy and sell shares face-to-face have

increasingly been replaced by lightning-fast electronic systems that use algorithms to execute astounding volumes of transactions. Trading at the Speed of Light tells the story of this epic transformation. Donald MacKenzie shows how in the 1990s, in what were then the disreputable margins of the US financial system, a new approach to trading—automated high-frequency trading or HFT—began and then spread throughout the world. HFT has brought new efficiency to global trading, but has also created an unrelenting race for speed, leading to a systematic, subterranean battle among HFT algorithms. In HFT, time is measured in nanoseconds (billionths of a second), and in a nanosecond the fastest possible signal—light in a vacuum—can travel

only thirty centimeters, or roughly a foot. That makes HFT exquisitely sensitive to the length and transmission capacity of the cables connecting computer servers to the exchanges' systems and to the location of the microwave towers that carry signals between computer datacenters. Drawing from more than 300 interviews with high-frequency traders, the people who supply them with technological and communication capabilities, exchange staff, regulators, and many others, MacKenzie reveals the extraordinary efforts expended to speed up every aspect of trading. He looks at how in some markets big banks have fought off the challenge from HFT firms, and how exchanges sometimes engineer technical systems to favor certain types of algorithms over others. Focusing on

the material, political, and economic characteristics of high-frequency trading, *Trading at the Speed of Light* offers a unique glimpse into its influence on global finance and where it could lead us in the future.

## **REVIEW OF TECHNICAL TRADERS GUIDE TO COMPUTER ANALYSIS OF THE FUTURES MARKETS**

- A great story! So many things about the whaling industry and Nantucket that I didn't know about made this book all the more enjoyable. Some of the scenes

described after the shipwreck made my skin crawl and I wonder...what would any of us do if in a similar situation?

- this is one of the finest books i've ever read. the story is fabulous and the author's delivery is perfect. however, it is VERY graphic. the content can be extremely disturbing if you are not interested in the worst events any human can experience. it is told from the perspective of the survivors.
