## **REVIEW OF EARLY CHINESE LITERATURE**

- When you read this book, so many visions should come to mind, 1984, Brave New World, Animal Farm, Fritz Lang's Metropolis and Chaplin's Modern Times...and Solzhenitzyn's Gulag. This is a terrifying world where everyone has literally been reduced to a number, and happiness is guaranteed by a operation to remove your imagination. People have to chew each bite of food fifty times, and sex is based on a weekly allowance. D-503 lives in the glass structure of the ONE STATE (whose leader is referred to as the Benefactor). You have to get permission to put down the blinds in your room when you are allowed to have sex. The rest of the time you can see all of your neighbors because all the interior walls are glass too. Each night he walks in step, four abreast, to the march music that plays over hidden speakers. His "lover" is an O (who seems to represent motherhood), and her friend is R who is a poet (and represents the arts and creativity). He then meets I-330, who is part of a small group of rebellious numbers who sneak out of the city into nature. Among her friends is an ethereal member who is described to be like a 'shadow', and goes by S. O gets pregnant, I starts her revolution, and S does his 'judas' or 'snake in the garden of Eden' act. What makes this so amazing a story is that it was written in 1920 and never published in the Soviet Union. It also was written

before any Totalitarian System existed. Before Mussolini, Stalin, and Hitler, Zamyatin saw them coming, and knew they would destroy all that came before them.

- While rapid change has always been a fundamental component of the computing field, recent changes have been far more substantial and difficult to deal with. In the past, changes were generally things like the introduction of a new language or a change in the structure of an old language. While these were difficult, experienced IT workers grew to accept them as part of the job. However, the recent changes are far more significant and often differences in kind rather than differences in degree. Previously, collaboration between programmers could usually be handled by a gathering in a meeting room. Now, with the globalization of a project, organizing a collaboration literally is a difference between night and day. While it is daytime for some of the workers, for those on the other side of the world it is nighttime. There are also cultural, social and language differences to be factored into the communication protocols. Writing the source code is constantly shrinking as a relative percentage of the effort needed to create a software package. Developers are being forced to learn more about the business side and need to talk intelligently and

persuasively about return on investment, time to market and profit/loss expectations. Manns and Rising describe fundamental methods that can be used to introduce change into an organization without having the cure be worse than the disease. As the presence of the word "patterns" in the title indicates, these are not specific recommendations for particular types of changes. They are general formulas for smoothly transitioning a social and political structure from one systemic belief to another. Since organizations are group entities where everyone shares some common beliefs and practices and those beliefs and practices cannot be changed by a mere decree, Manns and Rising provide advice that can aid nearly all companies. Generally, the effectiveness of the aid will rise with the size of the company, as clearly small one or two-person companies can probably introduce change easily. The solution to most problems faced by a company is to modify a process within that company. Since the changes in IT organizations have increased in magnitude over the last few years, this has grown more difficult. Manns and Rising show you how to prepare the ground for the change, which is the first step in solving most problems. I ranked it the best book of the year 2004 in my best books of the year column for the online "Journal of Object Technology."
