Weather radar information is one of the most valuable tools available to pilots to ensure safe, efficient, and comfortable flight operations. Onboard weather radar allows pilots to tactically navigate near and around severe weather with confidence. And with the advent of datalink radar data systems, pilots of all types of aircraft and skill levels can easily access similar vital information. Yet pilots must understand how to use these technologies and their potential flaws to avoid inadvertently getting too close to or penetrating severe weather, which could obviously have detrimental outcomes. Author Dr. David Ison takes you through the fundamental knowledge and skills necessary to operate both airborne and datalink weather radar. With a focus on simplicity and real-world application, Dr. Ison introduces and explains the essential concepts of radar operation and interpretation. Beginning with radar and severe weather theory, he covers attributes of inclement weather phenomena, how they are detected, and how pilots can evaluate these conditions through available radar sources. Airborne weather radar essentials such as attenuation, tilt management, contouring, and gain are explained with real-world examples. The text outlines advanced features including auto-tilt, turbulence detection, wind shear warning systems, and terrain mapping and provides operational strategies for all phases of flight. The detailed sections on datalink radar information explain how the system works, how to use available data, and common pitfalls. Dr. Ison describes the advantages and disadvantages of both airborne and datalink radar systems to help pilots understand the best and most effective use of each. Each chapter provides case examples, concept questions to test your understanding, and scenarios to assess your judgment and evaluation skills. Regardless of your current skill level--and whether you are just considering adding datalink radar to your toolkit or have been flying with airborne radar for years--this book can serve as a fundamental reference on using radar data in flight.

This title was first published in 2002: This field guide assesses two views of human error - the old view, in which human error becomes the cause of an incident or accident, or the new view, in which human error is merely a symptom of deeper trouble within the system. The two parts of this guide concentrate on each view, leading towards an appreciation of the new view, in which human error is the starting point of an investigation, rather than its conclusion. The second part of this guide focuses on the circumstances which unfold around people, which causes their assessments and actions to change accordingly. It shows how to "reverse engineer" human error, which, like any other component, needs to be put back together in a mishap investigation.

Clarence 'Kelly' Johnson's design for the Lockheed Constellation, known affectionately as the 'Connie', produced one of the world's most iconic airliners. Lockheed had been working on the L-044 Excalibur, a four-engine, pressurized airliner, since 1937. In 1939, Trans World Airlines, at the instigation of major stockholder Howard Hughes, requested a 40-passenger transcontinental aircraft with a range of 3,500 miles, well beyond the capabilities of the Excalibur design. TWA's requirements led to the L-049 Constellation, designed by Lockheed engineers including Kelly Johnson and Hall Hibbard. Between 1943 and 1958, Lockheed built 856 Constellations in numerous models at its Burbank, California, factory - all with the same distinctive and immediately recognizable triple-tail design and dolphin-shaped fuselage. The Constellation was used as a civil airliner and as a military and civilian air transport, seeing service in the Berlin and the Biafran airlifts. Three of them served as the presidential aircraft for Dwight D. Eisenhower. After the Second World War, TWA's transatlantic service began on 6 February 1946 with a New York-Paris flight in a Constellation. Then, on 17 June 1947, Pan Am opened the first-ever scheduled round-the-world service with their L-749 Clipper America. In this revealing insight into the Lockheed Constellation, the renowned aviation historian Graham M. Simons examines its design, development and service, both military and civil. In doing so, he reveals the story of a design which, as the first pressurized airliner in widespread use, helped to usher in affordable and comfortable air travel around the world.

If we choose to trust unconditionally, how many lives could we change? When Pastor Bruce Deel took over the Mission Church in the 30314 zip code of Atlanta, he had orders to shut it down. The church was old and decrepit, and its neighborhood--known as "Better Leave, You Effing Fool," or "the Bluff," for short--had the highest rates of crime, homelessness, and incarceration in Georgia. Expecting his time there to only last six months, Deel was not prepared for what happened next. One Sunday, he was approached by a woman he didn't know. "I've been hooking and stripping for fourteen years," she said. "Can you help me?" Soon after, Bruce founded an organization called City of Refuge rooted in the principle of radical trust. Other nonprofits might drug test before offering housing, lock up valuables, or veto a program giving job skills and character references to felons as "a liability." But Bruce believed the best way to improve outcomes for the marginalized and impoverished was to extend them trust, even if that trust was violated multiple times--and even if someone didn't yet trust themselves. Since then, City of Refuge has helped over 20,000 people in Atlanta's toughest neighborhood escape the cycles of homelessness, joblessness, and drug abuse. Of course, trust alone can't overcome a broken system that perpetuates inequality. Presenting an unvarnished window into the lives of ex-cons, drug addicts, human trafficking survivors, and displaced souls who have come through City of Refuge, Trust First examines the context in which Bruce's Atlanta neighborhood went downhill--and what City of Refuge chose to do about it. They've become a one-stop-shop for transitional housing, on-site medical and mental health care, childcare, and vocational training, including accredited intensives in auto tech, culinary arts, and coding. While most social services focus on one pain point and leave the burden on the poor to find the crosstown bus that'll serve their other needs, Bruce argues that bringing someone out of homelessness requires treating all of their needs simultaneously. This model has proven so effective that a dozen new chapters of City of Refuge have opened in the US, including in California, Illinois, Ohio, Maryland, Virginia, Texas, and Georgia. More than a narrative about a single place in time, this radical primer for behavioral change belongs on every leader's shelf. Heartfelt, deeply personal, and inspiring, Trust First will break down your assumptions about whether anyone is ever truly a lost cause. Bruce will donate a portion of his proceeds from Trust First to the charitable organization City of Refuge.

NEW YORK TIMES BUSINESS BEST SELLER • A suspenseful behind-the-scenes look at the dysfunction that contributed to one of the worst tragedies in modern aviation: the 2018 and 2019 crashes of the Boeing 737 MAX. An "authoritative, gripping and finely detailed narrative that charts the decline of one of the great American companies" (New York Times Book Review), from the award-winning reporter for Bloomberg. Boeing is a century-old titan of industry. It played a major role in the early days of commercial flight, World War II bombing missions, and moon landings. The planemaker remains a cornerstone of the U.S. economy, as well as a linchpin in the awesome routine of modern air travel. But in 2018 and 2019, two crashes of the Boeing 737 MAX 8 killed 346 people. The crashes exposed a shocking pattern of malfeasance, leading to the biggest crisis in the company's history—and one of the costliest corporate scandals ever. How did things go so horribly wrong at Boeing? Flying Blind is the definitive exposé of the disasters that transfixed the world. Drawing from exclusive interviews with current and former employees of Boeing and the FAA; industry executives and analysts; and family members of the victims, it reveals how a broken corporate culture paved the way for catastrophe. It shows how in the race to beat the competition and reward top executives, Boeing skimmed on testing, pressured employees to meet unrealistic deadlines, and convinced regulators to put planes into service without properly equipping them or their pilots for flight. It examines how the company, once a treasured American innovator, became obsessed with the bottom line, putting shareholders over customers, employees, and communities. By Bloomberg investigative journalist Peter Robison, who covered Boeing as a beat reporter during the company's fateful merger with McDonnell Douglas in the late '90s, this is the story of a business gone wildly off course. At once riveting and disturbing, it shows how an iconic company fell prey to a win-at-all-costs mentality, threatening an industry and endangering countless lives.

REVIEW OF BOEING 737 TECHNICAL GUIDE RAPIDSHARE

- I think this was a more humorous book in the Wheel of Time series. Mat and Nynaeve are ALWAYS fun to read about, and they had the most screen time in this book. Or almost the most, anyway. As usual, there were several different plotlines, but Jordan had a different approach this time - he spent the first half of the book with Egwene and her Aes Sedai, and the second half consisted mostly of Nynaeve/Elayne/Mat in Ebou Dar. Rand gets some screen time in both parts, of course. There are several "dark" moments (especially at the end...), several plot twists and surprises, and many parts that made me laugh out loud. All in all, a very enjoyable book to read. And of course, what else would we expect out of The Wheel of Time, right? But...come on!! First Moiraine, and now....I won't spoil it, but it would appear that yet another main character has died at the end of this book. YEEAARRRGH! I'll quit reading the series pretty soon if Jordan doesn't stop killing off my favorite characters! But, seriously, do you really WANT this series to end? I was surprised to find out that some people are getting impatient, saying that it's lasting too long. I say that these people are very close-minded, or maybe SIMPLE-minded. Can't you see that there are so many characters and plots, the series ISN'T going to wrap up in just a few books? Maybe if it was ONLY about Rand, but..it's not. The Wheel of Time series is about an entire world, a world with it's own history and politics. It's about an entire cast of characters, and the parts they play in trying to save this world. And most of all, it's about the battle of Good and Evil. There is not a more timeless tale than that.

- I found a 1929 copy of this book in my Grandmother's things and was quickly struck by how every single day's entry has spoken to me. I love that the book was first published in 1901, and most of the entries are from authors/saints/etc who lived in the 1500-1800's, some earlier. I've purchased multiples to give to friends who I know are going through struggles.
