## **REVIEW OF YOUSMLE STEP 1 ANKI DECK**

- Professor Tainter aimed to uncover the common denominator of major collapses of complex societies throughout history. That runs the risk of either producing an answer so vague and general as to be useless or shoehorning data where it does not belong. Instead, his analysis of marginal returns to investments in complexity allows for an empirically

verifiable definition of conditions likely to lead to collapse without being so narrow as to preclude flexible application to widely different circumstances. He demonstrated the approach with credible explanations for the Roman, Mayan and Chacoan collapses. He distinguished what does and does not constitute a decline in marginal returns, gave examples of situations that produce declining returns, and described the context in which declining returns will or will not likely lead to collapse. Finally, Dr. Tainter did a fine job of demolishing some older theories of collapse. My main suggestion for future development of the theory would be to consider the interplay of complexity, technology, climate change, and resource depletion in the context of an updated understanding of "carrying capacity" where complex institutions are "carried" (with a variable cushion against collapse) at a "capacity" defined by resources with levels influenced by climate and technology.

- This is a compelling novel with deep meaning. The author draws you in and then surprises you throughout the story. The book is strongly Catholic at its root. In addition the language is beautiful. I consider this a must read.
