REVIEW OF HSE MANUAL FOR OIL GAS PIPELINE TERVOL

- Dannon Brinkley has one mission: to dispel the fear of death. He does this by sharing his experience of what it's like on the other side. He should know, as he so humorously states. After all, he's already experienced death three times! (I wonder if he holds the record for the most NDEs in one life.) In this third book he's written about his experience, he reveals information which, as he says, he was reluctant to share before. That is the story of the souls who are stuck, wandering in limbo, who have yet to complete their journey. Witnessing their state inspired Dannon to outline the secrets of divine living that can help us now and in our transition to the other side. To read Dannon's accounts is to catch a glimpse of the unknown so we can start preparing now.

- It has been estimated that the earth was formed about 4.5 billion years ago and that human beings have inhabited the planet only about 10 to 12 thousand years - ever since the thawing of the last ice age. During our relatively brief time on this planet, we have been fortunate to enjoy moderate temperatures. However, according to Tim Flannery as well as many other students of climate science, the consumption of fossil fuels such as oil, coal, and wood is releasing so much carbon dioxide into the atmosphere that the earth is now warmer than anytime in the last 650,000 years. This is common knowledge to people who read and listen to the news. What is interesting about Flannery's

well-written and well-researched book is that he describes in detail the consequences of a few degrees in temperature rise. If the earth's temperature rises a few degrees thousands of species and ecosystems will die, a few more still and it will kill off the human race. Greenhouse gases like carbon dioxide stay in the atmosphere for well over fifty years. The kind of build up that is currently taking place will affect people beyond our lifetimes. Unfortunately the people making decisions today have a much shorter time horizon in mind. Flannery predicts that we will soon reach a tipping point, beyond which the damage will be irreparable. Flannery, an Australian paleontologist, first became interested in climate science when he noticed the rapid advance of trees in the mountains around his favorite hiking trails. He also noticed that the glaciers on the mountains were receding much faster than previously predicted. These observations led him to do further research, which produced this book. He found that trends such as the ones he was observing in Australia were occurring on a global scale. Flannery found that the glaciers on the poles are receding at a rapid rate, and that vegetation is advancing in the polar direction. Vegetation is receding away from the equator and leaving the equatorial area more arid. This in turn is causing rising tides, more flooding, more hurricanes, and, ironically, more droughts. The warming of the poles is causing a decline in the krill population, which in turn is causing the demise of the emperor penguin and whale population. The polar bears and the caribou are also suffering greatly due to warming temperatures. The rapid change in climate is causing behavioral change in many species, causing them either to mate too soon, or too late, or not at all. From the golden toad to butterflies, to fish, and to migrating birds changing weather patterns are upsetting many fragile ecosystems. As a herald of global warming, Flannery will have many critics, not surprisingly from the oil and coal industries, and from politicians who do their bidding. Governments and multinationals have generally tried to suppress information concerning climate change or tried to cast doubt on the findings, but the evidence is speaking louder and more frequently. Last year, Australia's environmental minister even cited Flannery's book when he declared that global warming was indeed a reality and that action needed to be taken. Flannery argues that there are piecemeal steps that citizens and governments can take to reverse the trend. This book is a good overview of the problem and it is a good reminder that if something isn't done the damage will be lasting.
