The explosion of information technology has led to substantial growth of web-accessible linguistic data in terms of quantity, diversity and complexity. These resources become even more

useful when interlinked with each other to generate network effects. The general trend of providing data online is thus accompanied by newly developing methodologies to interconnect linguistic data and metadata. This includes linguistic data collections, general-purpose knowledge bases (e.g., the DBpedia, a machine-readable edition of the Wikipedia), and repositories with specific information about languages, linguistic categories and phenomena. The Linked Data paradigm provides a framework for interoperability and access management, and thereby allows to integrate information from such a diverse set of resources. The contributions assembled in this volume illustrate the band-width of applications of the Linked Data paradigm for

representative types of language resources. They cover lexical-semantic resources, annotated corpora, typological databases as well as terminology and metadata repositories. The book includes representative applications from diverse fields, ranging from academic linguistics (e.g., typology and corpus linguistics) over applied linguistics (e.g., lexicography and translation studies) to technical applications (in computational linguistics, Natural Language Processing and information technology). This volume accompanies the Workshop on Linked Data in Linguistics 2012 (LDL-2012) in Frankfurt/M., Germany, organized by the Open Linguistics Working Group (OWLG) of the Open Knowledge Foundation (OKFN). It

assembles contributions of the workshop participants and, beyond this, it summarizes initial steps in the formation of a Linked Open Data cloud of linguistic resources, the Linguistic Linked Open Data cloud (LLOD).

The book, entitled “Theoretical and Applied Studies on Turkish Economy, Vol I”, aims to make contributions both to academic world, namely to the literature of economics and to real world through the formation of national economic policies in various aspects. The book is designed to examine Turkish economy from different perspectives and to contribute to the enhancement of competitiveness. For this aim, 46 scholars, 3 editors and the precious employees of IJOPEC Publications came

together and published this book. In all chapters, current issues are tried to be examined through state-of-the-art econometric approaches and rigorous analysis. Like any other books, the process was toilsome and demanding but the aim is divine: to contribute to the literature and to Turkish economy. Although tiring, subsequent volumes of the examination of Turkish economy is planned to be published in the future. Consequently, any academician, or practitioner who is interested in Turkish economy and its connections with global economy would benefit from the book.

bookdown: Authoring Books and
Technical Documents with R Markdown

presents a much easier way to write books and technical publications than traditional tools such as LaTeX and Word. The bookdown package inherits the simplicity of syntax and flexibility for data analysis from R Markdown, and extends R Markdown for technical writing, so that you can make better use of document elements such as figures, tables, equations, theorems, citations, and references. Similar to LaTeX, you can number and cross-reference these elements with bookdown. Your document can even include live examples so readers can interact with them while reading the book. The book can be rendered to multiple output formats, including LaTeX/PDF, HTML, EPUB, and Word, thus making it easy to put your documents online. The style

and theme of these output formats can be customized. We used books and R primarily for examples in this book, but bookdown is not only for books or R. Most features introduced in this book also apply to other types of publications: journal papers, reports, dissertations, course handouts, study notes, and even novels. You do not have to use R, either. Other choices of computing languages include Python, C, C++, SQL, Bash, Stan, JavaScript, and so on, although R is best supported. You can also leave out computing, for example, to write a fiction. This book itself is an example of publishing with bookdown and R Markdown, and its source is fully available on GitHub.

The Interpretation of Realities Vintage

This book collects research contributions

concerning quantitative approaches to characterize originality and universality in language. The target audience comprises researchers and experts in the field but the book may also be beneficial for graduate students. Creativity might be considered as a morphogenetic process combining universal features with originality. While quantitative methods applied to text and music reveal universal features of language and music, originality is a highly appreciated feature of authors, composers, and performers. In this framework, the different methods of traditional problems of authorship attribution and document classification provide important insights on how to quantify the unique features of authors, composers, and styles. Such unique

features contrast, and are restricted by, universal signatures, such as scaling laws in word-frequency distribution, entropy measures, long-range correlations, among others. This interplay between innovation and universality is also an essential ingredient of methods for automatic text generation. Innovation in language becomes relevant when it is imitated and spread to other speakers and musicians. Modern digital databases provide new opportunities to characterize and model the creation and evolution of linguistic innovations on historical time scales, a particularly important example of the more general problem of spreading of innovations in complex social systems. This multidisciplinary book combines

scientists from various different backgrounds interested in quantitative analysis of variations (synchronic and diachronic) in language and music. The aim is to obtain a deeper understanding of how originality emerges, can be quantified, and propagates.

While ample studies exist on ditransitives in various languages, notably from a typological perspective, more work needs to be done on identifying the main processes and factors that trigger and constrain the changes they undergo over time. The goal of this volume is to help fill this gap by bringing together data and information on individual languages that have thus far been left out of the discussion and by expanding our knowledge of already studied linguistic

traditions so as to achieve a broader diachronic description. Since one of the distinctive features of ditransitives is their synchronic variability in terms of structural alternation and alignment split, diachronic research can throw up new insights into developmental dynamics that are eminently complementary; namely, on the one hand, the emergence, development and loss of construction alternation and, on the other, the acquisition of new functions over time. The analyses offered in the book yield different and interconnected answers to the general question of how ditransitives change by drawing on different functional principles that play a role in the diachronic reorganization of this dynamic domain and by providing a number of original

theoretical suggestions.

The Australian Official Journal of Trademarks Ergon Verlag

This is the first monograph on the emerging area of linguistic linked data. Presenting a combination of background information on linguistic linked data and concrete implementation advice, it introduces and discusses the main benefits of applying linked data (LD) principles to the representation and publication of linguistic resources, arguing that LD does not look at a single resource in isolation but seeks to create a large network of resources that can be used together and uniformly, and so making more of the single resource. The book describes how the LD principles can be applied to modelling language resources. The first part provides the

foundation for understanding the remainder of the book, introducing the data models, ontology and query languages used as the basis of the Semantic Web and LD and offering a more detailed overview of the Linguistic Linked Data Cloud. The second part of the book focuses on modelling language resources using LD principles, describing how to model lexical resources using Ontolex-lemon, the lexicon model for ontologies, and how to annotate and address elements of text represented in RDF. It also demonstrates how to model annotations, and how to capture the metadata of language resources. Further, it includes a chapter on representing linguistic categories. In the third part of the book, the authors describe how language resources can be

transformed into LD and how links can be inferred and added to the data to increase connectivity and linking between different datasets. They also discuss using LD resources for natural language processing. The last part describes concrete applications of the technologies: representing and linking multilingual wordnets, applications in digital humanities and the discovery of language resources. Given its scope, the book is relevant for researchers and graduate students interested in topics at the crossroads of natural language processing / computational linguistics and the Semantic Web / linked data. It appeals to Semantic Web experts who are not proficient in applying the Semantic Web and LD principles to linguistic data, as well as to

computational linguists who are used to working with lexical and linguistic resources wanting to learn about a new paradigm for modelling, publishing and exploiting linguistic resources.

There is a strong view that economics is the academic discipline that best represents the claim of positive science among social sciences. Economics has undergone significant transformations after its emergence as a science. Despite all these transformations, the feature containing positive and normative elements has not changed. While economists from the political economy tradition focus on qualitative

studies that relate to other social sciences, especially political science and history, a group of economists adopt the qualitative methods of natural sciences to analyze economic problems. There is a debate among economists on how to understand social reality and what kind of science the economy should be. Business is a discipline that has declared its relative independence from economics over time. Business is a research field that encompasses a wide range of areas ranging from organizational behavior of individuals to the firm's production and marketing strategies. This book contains articles on essential topics related to these disciplines, which have an inseparable relationship between them. Academicians contributing to the book

have produced works on current topics of discussion as well as key subjects that remain important in economics and management.

The book that inspired the major new

motion picture *Mandela: Long Walk to Freedom*. Nelson Mandela is one of the great moral and political leaders of our time: an international hero whose lifelong dedication to the fight against racial oppression in South Africa won him the Nobel Peace Prize and the presidency of his country. Since his triumphant release in 1990 from more than a quarter-century of imprisonment, Mandela has been at the center of the most compelling and inspiring political drama in the world. As president of the African National Congress and head of South Africa's antiapartheid movement, he was instrumental in moving the nation toward multiracial government and majority rule. He is revered everywhere as a vital force in the fight for human rights and racial equality.

LONG WALK TO FREEDOM is his moving and exhilarating autobiography, destined to take its place among the finest memoirs of history's greatest figures. Here for the first time, Nelson Rolihlahla Mandela tells the extraordinary story of his life--an epic of struggle, setback, renewed hope, and ultimate triumph.

"Early Korea is dedicated to developing the fields of early Korean history and archaeology in the English language. The present volume consists of six scholarly works by specialists active in these fields. Three studies focus on the topic of recent advances in historical archaeology on the Korean peninsula and adjacent regions and how this is changing the ways historians understand

the history of the earliest states on the peninsula. Another study surveys the origins and development of ceramic traditions in Korea based on recently recovered archaeological data. Finally, two studies discuss the practice of heritage management in Korea, focusing on rescue archaeology and heritage protection." --Book Jacket.

James Lilley's life and family have been entwined with China's fate since his father moved to the country to work for Standard Oil in 1916. Lilley spent much of his childhood in China and after a Yale

professor took him aside and suggested a career in intelligence, it became clear that he would spend his adult life returning to China again and again. Lilley served for twenty-five years in the CIA in Laos, Tokyo, Hong Kong, and Taiwan before moving to the State Department in the early 1980s to begin a distinguished career as the U.S.'s top-ranking diplomat in Taiwan, ambassador to South Korea, and finally, ambassador to China. From helping Laotian insurgent forces assist the American efforts in Vietnam to his posting in Beijing during the Tiananmen Square crackdown, he was in a remarkable number of crucial places during challenging times as he spent his life tending to America's interests in Asia. In *China Hands*, he includes three generations of stories

from an American family in the Far East, all of them absorbing, some of them exciting, and one, the loss of Lilley's much loved and admired brother, Frank, unremittingly tragic. *China Hands* is a fascinating memoir of America in Asia, Asia itself, and one especially capable American's personal history.
