REVIEW OF BIGGER THAN THE GAME RESTITCHING A MAJOR LEAGUE LIFE

- When compared to some of the other wonderful literature that is available for children, this book doesn't have a leg to stand on. It was poorly written and rather boring. (...)

- I have the square root of negative one tattooed on my shoulder because of this book. "We" was a predecessor to George Orwell's dystopic novel "1984". "We" tells the story of "D-503", a mathematician and engineer living in a society where everything a person did, down to the number of times a person brushed their teeth, was controlled by a master plan and a central authority. D-503 began the novel a perfect subject of the central authority. For him, the power and organization of central authority was synonymous with the power of the rules of mathematics. Both were absolute. When he first encountered the square root of negative one though, D-503 became frustrated, because there was something that mathematics couldn't answer: a limit to knowledge, a limit to what the rules could do. In the totalitarian world that D-503 lived in, it meant that there were things that the central authority would never be able to control or understand. By the end of the novel, D-503 had come to embrace the square root of negative one. He learned that the unknown and the unknowable are as important to existence as the known and the knowable. "We" was written by Yevgeny Zamyatin at the time of the Communist Revolution in Russia. It was the first book banned in the Soviet Union, and it remained banned until 1988. The square root of negative one means that there will always be things beyond the rules. It means there are the things that will always elude control and remain wild, and there are no final revolutions.
