REVIEW OF CFM56 7B ENGINE

- This book is simply a must have for the serious minded individual seeking knowledge concerning the Theraveda school. To seek through Vissapana Meditation and mindfulness that which can lead to many great rewards. Nice book and a great addition to a personal library.
- This guy has built some computers before. He has some excellent insights into the computer parts and functions.

What you need versus what you want..."don't buy tomorrows technology today...you can easily upgrade it later saving hundreds (\$500). Some good advice. I felt good about going forward with the build.As the author states, he can't write in detail about everything. So, you should be prepared to pay ten cents per page for his book. He's not wordy...and he's got a sense of humor if your in the right frame of mind. The computer building business must be getting tougher to make a buck these days.I researched my parts using what Vendors were using in thier builds and then researched them via the internet. Try Pricewatch.com; Motherboards.com; and use a search engine for computer component reviews. Then talk to the sales people...they'll help you for a sell.Even if you buy your computer prebuilt, you should go through the reading and research so you can pick out a computer with right components you need and not just buzzword names.Go ahead a try to build one. If you get in trouble, just be prepared to let the computer store down the road bail you out for a nominal fee.
