This timely book deals with a current topic, i.e. the applications of metaheuristic algorithms, with a primary focus on optimization problems in civil engineering. The first chapter offers a concise overview of different kinds of metaheuristic algorithms, explaining their advantages in solving complex engineering problems that cannot be effectively tackled by traditional methods, and citing the most important works for further reading. The remaining chapters report on advanced studies on the applications of certain metaheuristic algorithms to specific engineering problems. Genetic algorithm, bat algorithm, cuckoo search, harmony search and simulated annealing are just some of the methods presented and discussed step by step in real-application contexts, in which they are often used in combination with each other. Thanks to its synthetic yet meticulous and practice-oriented approach, the book is a perfect guide for graduate students, researchers and professionals willing to applying metaheuristic algorithms in civil engineering and other related engineering fields, such as mechanical, transport and geotechnical engineering. It is also a valuable aid for both lectures and advanced engineering students.

"Be uncommon Christians . . . that is, eminently holy, self-denying, cross-bearing, Bible, everyday Christians." So James Brainerd Taylor (1801-1829) encouraged others to be, and so he strived to be himself. Of Intense Brightness reveals aspects of Taylor's uncommon Christianity by allowing the Princeton and Yale-educated evangelist to speak for himself. By means of forty-five selected and edited letters and journal entries of Taylor's (written from ages fourteen to twenty-seven), readers will obtain a unique glimpse into the inner workings of an evangelical Protestant spirituality that was, according to nineteenth-century Princeton Seminary professor Samuel Miller, "so uniform, that we had only, as it were, one face, and that of intense brightness to behold."

A NATO Advanced Study Institute (ASI) on High-Brightness Accelerators was held at the Atholl Palace Hotel, Pitlochry, Perthshire, Scotland, from July 13 through July 25, 1986. This publication is the Proceedings of the Institute. This ASI emphasized the basic physics and engineering of the relatively new and fast-emerging field of high-brightness particle accelerators. These machines are high- to very-high-current (amperes to hundreds of kiloamperes), modest-voltage (megavolt to tens of megavolts) devices, and as such are opposed to those historically used for high-energy physics studies (i.e., gigavolt and higher energies and rather low currents). The primary focus of the Institute was on the physics of the accelerator and the beam, including the dynamics, equilibria, and instabilities of high-current beams near the space-charge limit; accelerator engineering techniques; and the applications of high-brightness beams in areas such as free-electron lasers, synchrotron-radiation sources, food processing, and heavy- and light-ion fusion. The Institute concentrated on bringing together several diverse but related communities which, we hope, benefited from this opportunity to interact: the North American activity in machine technology, engineering, and diagnostics with the strong European theoretical community; the basic beam physicists with the engineering technologists.

Indoor climate is determined by rational lighting, heating, cooling and ventilating systems. For occupants' well-being it should be consistent with how regional outdoor climate works in the flow of radiation via four paths of heat transfer: radiation; convection; conduction; and evaporation. This book starts with the relationship between the human body and its immediate environmental space followed by a brief introduction of passive and active systems for indoor climate conditioning. The nature of light and heat is discussed with a focus on building envelope systems such as walls and windows, and then examined from the viewpoint of thermodynamics and human-biology. Some examples are given to enable a better understanding of luminous and thermal characteristics of our most immediate environment particularly for those professionally involved in environmental planning, designing, and engineering to know about bio-climatic design principle.

High brightness metal vapor lasers have become the most bright and powerful in the visible spectral range among all existing laser types, resulting in numerous applications ranging from purely fundamental research to practical application in large-scale commercial problems such as isotope selection. This book presents a full series of fundamental problems on the development of physical fundamentals and mathematical models for practical realization of a high-power laser radiation on self-contained transitions in metal atoms. It is the first fundamental review on physics and the technique of high-brightness metal vapor lasers.

Scripture is the foundation for all of Christian life and ministry, but in our current age it is being challenged, doubted, and, in many cases, simply ignored. Wayne Grudem, one of evangelicalism's best-known theologians and authors, has worked tirelessly throughout his life to demonstrate the necessity, sufficiency, and centrality of Scripture. In his honor, Grudem's friends and colleagues, including John Piper, Thomas R. Schreiner, Sam Storms, Vern S. Poythress, John M. Frame, Gregg R. Allison, Erik Thoennes, and John DelHousaye, have compiled a series of essays on various topics central to Grudem's life and teaching. Exploring topics such as the nature of Scripture, the relationship between Scripture and doctrine, and the role of Scripture in life and ministry, this volume stands as a testimony to the enduring worth of God's Word.

REVIEW OF NUMBERS 1 TO 26 BRIGHTER CHILD FLASH CARDS

- I had to read "Jim the Boy" for my freshman english course summer reading and thought that it was a horrible choice. It had no substance and was too easy to read. Although some apparently disagree, not a good choice for anyone over four years old.

- Li's photos captured the extreme madness of hundreds of thousands people in China during that so-called Cultural Revolution and it reveals the very dark side of human nature as seen from, for instance, that young woman cheerfully recorded the place, date and time when she saw Mao going by in his jeep, the humiliating punishment of all sorts of people such as Communist Party Provincial secretaries or provincial governors, newspaper workers, peasants, or whoever in huge mass demonstration against so-called "Anti-Revolutionary Reactionaries" to different Red Guard factions infightings they reminded me how Hitler got into power, how Japanese militarism got in total control in Japan in its war efforts, and, believe it or not, how George W. Bush & Co. got "elected" into the White House, they all show that similar built-in weakness of human characteristics- or the human genes! This book tells a lot about all of us. The monolithic political power, century's religious indoctrination are at work around clock and real enlightening secular education around the world is probably struggling in a losing battle. A good book of historical documents.
