Simcha Guterman's, *Leaves from Fire*, is a firsthand account written with the deep sense of comprehension he was documenting the fate of his people. Knowing full well that his life was in danger, Simcha chronicled the occurrences of the Holocaust on long scraps of paper, as they happened right before his eyes. The events described take place in Poland, during the first years of World War II. The author stuffed long paper scraps, written in Yiddish, into bottles and hid in them in different places. One of these bottles was discovered after the war. Simcha Guterman's work has been published and translated into eight different languages, receiving high praise from critics. The book's evocative illustrations were drawn by Yaakov Guterman, the author's son.

In essence, this story is about how a certain person was searching his bookshelf for something to read and in the end found a book, which turned out to be the source, from which it is possible to obtain absolutely any kind of information about absolutely any person. Meaning, information to the smallest particulars and details about what his or her qualities of personality are, how he or she lives, what he or she really wants to achieve, what he or she hides, and much more. And, it does not matter, if the subject is some person, who lived in the distant past or lives in the present or someone, who will live in the future. Since, as it turned out later on, this literary monument is nothing other than the Catalog of human population. In other words, the encyclopedia of Homo sapiens; in essence, the same as encyclopedias, reference books for specialists, which contain complete information about representatives of a particular subspecies of animals, plants, etc. Although at some point, the course of this story turned banal: "bad guys" from security services, intelligence services, politics decided to not only use this source of knowledge for their dirty deeds, but also to appropriate it solely for their personal use. And, the way they tried to do this is also banal: by physically destroying the author of discovery of the Catalog of human population and all of his colleagues. However, the ending of this story makes it stand out from the category of ordinary spy stories. At least because the main characters of this story managed to survive not due to favorable concatenation of circumstances or someone's help, but thanks to that knowledge, which they discovered in the ancient text, which turned out to be the Catalog of human population. Of course, such an outcome upset and continues to upset not only the Russian special services, but also all those people in whose way developers of the Catalog of human population got. And, in this civilization, there are countless numbers of such people: from psychologists (who become no longer needed by anyone) to organizers of this civilization themselves. Since from the standpoint of the Catalog of human population—technogenic civilization without a human, which they lovingly built for many centuries, is simply trash, to put it mildly, and beneath all criticism. And, they themselves are also trash. However, regular people, who (thanks to the scientific discovery made by Andrey Davydov) got the source with answers to all of their questions and individual recipes, now no longer

need to pay "experts on the human soul" for being shamelessly fooled. Therefore, whoever tries to kill developers of the Catalog of human population in the future must know that it is no longer possible, as they already became part of history of humanity. After all, at the current stage of development, a Homo sapiens has only one possibility to continue to live after death, to live through the ages: in the product that he/she created. And, those, who tried and continue to try to kill them, were nobodies and will remain nobodies, who one day will cease to exist without leaving a trace. As for organizers of this "civilization"—maybe instead of trying to find new recipes to destroy "excess billions" and trying to examine human potential using Neanderthal methods, it would be more reasonable not only to find out the recipe of how to make Homo sapiens a 100% controllable producer and consumer from the source (which, by the way, seems to have been left to humanity by creators of nature and a human on this planet), but also how to build a civilization without quotes? After all, it only seems to them that they are the main deceivers, while in reality they were fooled, and fooled majorly.

An uneducated youth, William Booth left home in 1849 at the age of twenty to preach the gospel for the New Methodist Connexion. Six years later he founded a new religious movement which succeeded to such a degree that the Salvation Army (which it became) is now a worldwide operation with massive membership. But that is only part of Booth's importance and heritage. In many ways his story is also that of the Victorian poor, as he and his wife Catherine made it their lives' work to battle against the poverty and deprivation which were endemic in the mid- to late 1800s. Indeed, it was Catherine who, although a chronic invalid, inspired the Army's social policy and attitude to female authority. Her campaign against child prostitution resulted in the age of consent being raised and it was Catherine who, dying of cancer, encouraged William to clear the slums -- In Darkest England, The Way Out. Roy Hattersley's masterful dual biography is not just the story of two fascinating lives but a portrait of an integral part of our history.

**REVIEW OF BORN IN BLOOD FIRE A CONCISE HISTORY OF LATIN AMERICA THIRD EDITION**

• I studied no less than four other tutorials, ranging from "okay" (Thinking in Java, Bruce Eckel) to

downright bad (Learning Java, O'Reilly). For a while, I was convinced that Java was a sickening, convoluted language with about 850 weird little "rules" that seemed to change for every possible situation. I was never going to get it. Then I gave this book a try, and soon realized that it was not the language that confounded me, but the other authors' explanations of it. Peter van der Linden does an outstanding job of explaining the language with a style that makes his text very easy to read and understand. Things began to click almost immediately, and at more than one point in my discovery of the brilliant design and engineering of the Java platform I caught myself laughing out loud and thinking, "That's \*so\* cool!" at some particular feature that had just been described in the text. Since reading it, I've written a few useful applications in Java, including a network monitoring tool, and a Java servlet that helps Netcool monitor some of my web servers at work (with the help of "Java Servlet Programming", from O'Reilly). If you've been struggling with learning Java, I strongly recommend giving this book a try. The language really is incredibly well thought out by Sun, you probably just need the right guide to show you around. Hopefully you'll find, as I did, that Peter van der Linden is that guide.

• I give this book away every chance I get \$\$\$ enough to do so. The first time I read it I was amazed at how I was on this adventure and it was changing the way I thought of things and how it influenced my dreams was amazing as well; being that the story is a telling of a dream, made me even more in wonder. Then I read it a second time and could not believe the amount of detail that comes out of this little book. If you know your Scriptures you will see them jump off the pages and here they are with visual application. If you don't know Scripture and find it hard to understand what The Bible is saying, here is a story that puts it in perspective. I love this book and can now understand why it has been so popular for so many many years. I will read this book again and again as medicine for my soul. High five for John Bunjan
