The completion of this collection took many months, and, for a variety of reasons, required the assistance and/or indulgence of a number of individuals. First and foremost, I would like to thank Tim Hudson for his useful input and support at the outset of the project. Likewise, I would like to thank Jesse O. McKee for providing a hospitable environment during my

affiliation with the University of Southern Mississippi. At Louisiana State University I am grateful to Sam Hilliard and Carville Earle for their invaluable understanding. The book became part of the GeoJournal Library as a result of Wolf Tietze's confidence in the topic, and because of Henri G. van Dorssen's (and Kluwer Academic Publishers') good nab.lre - despite numerous 'problems'. Curtis C. Roseman, and the remainder of the Geography Department at the University of Southern California (where I completed many last minute details for the volume), are to be thanked for the cordial and warm environment I received while a visitor in Los Angeles.

Finally, no multi-authored collection reaches completion without the help of many patient contributors. This particular book suffered many set-backs along the way, so I am particularly grateful to the authors herein. They demonstrated their compassion and exceptional professionalism throughout, by never second-guessing my decisions, and by allowing me to remedy the set-backs in my own way. They were a pleasure to work with, and they should take pride in their achievements.

Opening Doors to Student Understanding
Rowman & Littlefield

The media is full of reference to failing schools, troublesome pupils, underperforming boys, disappearing childhood

and a teaching profession in crisis as more and more teachers contemplate abandoning their careers. Key Questions in Education looks at the current and historical debates of each of these issues, examining how a multitude of stakeholders have viewed, and still view, childhood and schooling. In highlighting how these same or similar issues have persistently been debated throughout time, John T. Smith shows something of their complexity and the need to break apart these key enduring questions in education. Each chapter covers a key question such as: How far should the state interfere in education? Should schools feed

their pupils? and Why do children misbehave? Analysing each key question, chapters discuss how such issues were viewed or defined in the past, what solutions and outcomes were envisaged and compare and contrast how this relates to where we are now. Clear links are made throughout between historical sources and current ideology, policy, practice and research. In opening up these debates through case studies and vignettes, students are encouraged to reflect on how these contentious issues might be resolved and how this affects them as future educators.

An Introduction to Practice Pearson

Elgar Advanced Introductions are stimulating and thoughtful introductions to major fields in the social sciences and law, expertly written by the world's leading scholars. Designed to be accessible yet rigorous, they offer concise and lucid surveys of the substantive and policy issues associated with discrete subject areas. In this Advanced Introduction, Christopher Pollitt starts a penetrating account of the theories, methods and possible trajectories of the study of public

management, also examining the academic community itself, and its relationship to the world of practice. There is no more authoritative - or lively - text of such scope and focus. This is a stimulating analysis by a leading international scholar. It includes: · a global overview · a critical and authoritative analysis of the current state of the field · the location of academic research firmly in the real world context of austerity, climate and demographic change, and technological transformation · an examination of the relationship between academic study and the practice of public management · a look inside the 'ivory tower', at the forces changing

the way the subject is studied and practised. This truly unique work will be of particular interest to graduate students, advanced scholars, lecturers and trainers in public administration, public management, government, public policy, political science and development administration. Middle level and senior practitioners in public administration and public management will also find this an invaluable and sophisticated introduction.

An Approach to Problem-based Learning Pearson College Division

Help students meet today's literacy demands with this new book from Terry Roberts and Laura Billings. The authors

show how a seminar approach can lead students deeper into a text and improve their speaking, listening, and writing skills, as recommended by the Common Core State Standards. Roberts and Billings provide easy-to-follow information on implementing Paideia Seminars, in which students discuss a text and ask open-ended questions about it. When teachers use this lesson format, students are exposed to a wide range of increasingly complex texts. They also learn how to collaborate, talk about, and reflect on what they're reading, to make meaning independently and together. Seminars can be done in English class and across the curriculum, using social studies documents or

math problems as the texts under discussion. Teaching Critical Thinking also offers an array of practical resources: teacher lesson plans student samples a list of possible ideas and values for discussion a guide to asking good questions during a seminar six full seminar plans (including the texts), covering literature, social studies, and science topics

One-day, one-problem is a unique adaptation of problem-based learning (PBL) pioneered at Republic Polytechnic, Singapore. Here students are challenged each day with a problem from their domain and attain the necessary learning outcomes in the process of responding to the problem. Throughout the day students would engage in small group discussions, self-directed learning and conversations with their teacher who plays the role of a facilitator. This approach to learning and instruction represents a new brand of constructivist learning in a more structured

learning environment compared to conventional PBL. This book contains a series of chapters by authors with first-hand experience in the One-day, one-problem PBL approach. Unlike other books on PBL, the chapters are both research-informed and practical. Results of empirical studies into the factors of PBL such as quality of problems, tutor behaviours, scaffoldings, student learning and interest are discussed together with practical implications for the educator. The book begins with an overview of the one-day, one-problem process, providing a viewpoint from both the student and tutor. Republic Polytechnic's pedagogical philosophy and epistemological

belief of education are introduced with the intent to share how the polytechnic designed and implemented a system that supports the philosophical beliefs. Results and practical implications of empirical studies on the various factors that influence students' learning in PBL are discussed. These include the quality of problems and the use of scaffoldings for students' learning, tutors as facilitators, preparation of staff for PBL, student assessment, how students learn in the process of PBL and student interest.
