## REVIEW OF MS PUBLISHER EXERCISES

- There are a host of problems with radiocarbon dating. It assumes the isotope always decayed at the same rate. You simply cannot make those assumptions and call yourself a scientist. In many instances, items with known dates were given

to several labs to be tested and the dates came back way off. So far off, in fact, to make radiodating a joke. It also does not take into consideration a different prehistoric atmosphere which would inhibit the sun's radiation from hitting the earth, thereby making radiocarbon dating extremely tentative. It relies on too many assumptions to make it scientifically accurate.

- JPython is a JVM port of Python. It provides Java with generic capabilities similar to C++ templates and Ada generics, something I have been missing from the language itself [sure you can use interfaces, but they're not the same]. I knew very little about Python before reading this book, however I had read in Dr Dobbs about the potential of JPython for automating Java testing and decided to give the language a once over. I am very glad I did. A number of my fellow developers have started using JPython now and I know that it has been saving me a lot of time. Excellent reading, especially if your main interest is in picking up enough [realistic] knowledge about Python to use JPython effectively in simplifying many commonly tedious Java tasks [such as testing].
