REVIEW OF CHAPTER 17 WORDWISE

- Susan's novels are amazingly different. I love the fact that she researches for her stories, and gives each character great personalities! And, I really enjoy the way she webs characters from other books together. It is delightful to be able to follow these characters. And, the diversity of the stories she comes up with is just wonderful! I do appreciate the fact that her books are not based on illicit sex so if that's what you are looking for, don't look here. She incorporates just enough passion to fulfill most people's fantasies, and it is not very explicit. Well done, Susan!! LOVED that Susan gave Abigail the traits that she did. Abigail is smart and pretty. However, beauty is in the eye of the beholder and she becomes a goddess to the amazing James! He takes her under his wings and teaches her how to be a lady of passion, who can get what she wants. Of, course the two fall in love and don't want to be the first to say so. James loves Abigail even before he turns her into the goddess she becomes. Who doesn't want to be considered a goddess to the man they love!? This 'Ugly Duckling' mode is a trait for most of her characters. The difference here is Abigail's intelligence. She is truly smart. And so is James. He has a true appreciation for knowledge and it shows. Their mutual desire to teach and learn passion leads to some very romantic scenes and eventually to their very passionate union. This was a fun, blundering, and lovely read, and leads into another one of her great stories with Helena as her heroine! I am in love with all the Calhouns and you will be too. I do appreciate the fact that Susan uses passionate scenes in her books but is not too graphic or too much. The only reason I don't give it a 5 star rating is because it is repetitious in describing her doubts and sceneries and past situations. There is a lot that could have been left out that would not have affected the book at all. There are a few times in all her books that I am

screaming quietly to "just get on with the story!" But overall, I do recommend the book. Enjoy!!

- I have never asked for my \$ back for a book, but I am on this one. I took Practice Test 1: Almost 1 in 4 (13 out of 55) questions either have typos that would make the "correct" answer syntactically invalid, outright wrong "correct" answers, or very questionable "correct" answers. Q3. Typo: "VALUE" instead of "VALUES" Q7. Question is "What is relationship between Actors or Directors and Title." Answer incorrectly says "Many to Many". This would be true if question was "What is relationship between Actors and Directors." (One Actor can be directed by many Directors and one Director can direct many Actors). The title table is the resolution table for the many-to-many relationship between Actors and Directors. But per the question, one Actor can act in many titles; one Director can Direct many Titles. Q11. What is meant by the words "main" or "independent" entities? Where do these words come from? PaintScheme and OptionalEquipment should indeed be entities, but main? or independent? Also, recommends Customer table be keyed on Social Security numbers. These are not really unique (as they are supposed to be). Most pros would say this is a bad idea for a primary key. Q14. Since when is "Many to One" not a valid relationship cardinality? By convention, most people look at relationships like this as One to Many. It depends on which entity is your point of reference. Many to One is simply the inverse of One to Many; both are equally real and valid. Q16: Question refers to data type "text" generically in the question, but in the DDL mixes type text with type varchar. Q17: Question about relationship optionality. "Self-Recursive" is a word? Isn't that a tautology? What does recursive have to do with optionality? Q20: ">" sign is wrong for all answers

according to the wording of the question. Should be "<" or "<=". Q22: Typo: "ANDprice" instead of "AND price" Q26: Adding memory to remote clients is not a hardware solution for poor performance? In a client/server environment? What about large, locally cached cursors? Q27. Question presupposes that we know and remember the exact schema of the (I assume) pubs database. Option "b" won't work because of ambiguous column names. This is true only because the particular data model chosen for pubs. It has nothing to do with SQL Server. This data model view is not given to us in the question. Also, the query has no join or where clause so we get nonsensical results (every author's name with every city/state we have & vice-versa). Q32. We are asked to insert 001001001 into an INT column. This is a bogus thing to do, but it works anyway. the value 1001001 is inserted (see Q34). Q34. This question is *exactly* the same as Q32, however this time, we are told the answer is "String or binary data would be truncated..." (see Q32). Which is right? Q40. Two of the answers given are 32,734 (this is the "correct" answer), and 32,768. According to SQL Server Books Online, neither is correct. BOL says: "A maximum of 32,767 databases can be created on a server." Q43. Asks a question about the 401K_Amt column of the Benefits table. All answers incorrectly transpose this to read 401K_Amt.Benefits instead of Benefits.401K_Amt. Q44. Maximum number of files used by a single database. I could not find answer anywhere, BOL, etc. Maybe this book is right. Correct answer given is 32,768. One option was 32,767, which, would agree with BOL's max number of DATABASES (Also incorrectly given in this book). What is a file? I hope they mean physical file, as in mydb.mdf. Q49. Each answer has a DDL statement that will not execute because it refers to a column that does not exist: prod_type(prod)
