The Discovery and Conquest of the New World Stackpole Books

A radical approach to the environment which argues that by harnessing the power of science for human benefit, we can have a healthier planet As a prizewinning theoretical physicist and an outspoken advocate for scientific literacy, James Trefil has long been the public's guide to a better understanding of the world. In this provocative book, Trefil looks squarely at our environmental future and finds-contrary to popular wisdom-reason to celebrate. For too long, Trefil argues, humans have treated nature as something separate from themselves-pristine wilderness to be saved or material resources to be exploited. What we need instead is a scientific approach to the environment that embraces the human transformation of nature for our benefit. In Human Nature, Trefil exposes the benefits of genetically modified species, uncovers vital facts about droughts and global warming, and points to examples of environmental management where catering to humans reaps greater rewards than sheltering other species. By taking advantage of explosive advances in the sciences, we can fruitfully manage the planet, if we rise to the challenge. Like Rachel Carson's Silent Spring and Paul Ehrlich's Population Bomb, Human Nature promises to fundamentally alter the way we perceive our relationship to the Earth-but with

optimism rather than alarm.

The Story of the Life and Exploits of Captain Grant Marsh
Doylestown, Pa.

While conquering Greece and Macedonia the Romans defeated an intervention by the Seleucid Empire, the most powerful of the Hellenistic states founded by Alexander the Great's successors. Soon Roman armies crossed to Asia for the first time to carry the war to the Seleucids. Here they faced one of the most sophisticated armies of the ancient world, evolved from Alexander's all-conquering war machine with the exotic additions of elephants, scythed chariots and heavily armored cataphract cavalry. The Seleucids also possessed a formidable navy. The Roman army defeated the Seleucids at the epic battle of Magnesia in 190 BC, which marked the beginning of a long decline for Seleucid power in Asia . This, however, allowed other states to come to the fore, most notably Pontus . In the 1st century BC, Rome 's grip on its Asian provinces was shattered by the onslaught of Mithridates VI of Pontus, Rome 's most enduring foe. Mithridates was eventually overcome, after many Roman reverses, but these wars in turn led to conflict with Armenia . Like the other volumes in this series, this book gives a clear narrative of the course of these wars, explaining how the Roman war machine coped with formidable new foes and the challenges of unfamiliar terrain and climate. This volume draws on Dr. Evans' expertise in studying topography in relation to ancient events and specifically his original research into the battlefield of Magnesia.

This book represents recent research on tropical cyclones and their impact, and a wide range of topics are covered. An updated global climatology is presented, including the global occurrence of tropical cyclones and the terrestrial factors that may contribute to the variability and long-term trends in their occurrence. Research also examines long term trends in tropical cyclone occurrences and intensity as related to solar activity, while other research discusses the impact climate change may have on these storms. The dynamics and structure of tropical cyclones are studied, with traditional diagnostics employed to examine these as well as more modern approaches in examining their thermodynamics. The book aptly demonstrates how new research

into short-range forecasting of tropical cyclone tracks and intensities using satellite information has led to significant improvements. In looking at societal and ecological risks, and damage assessment, authors investigate the use of technology for anticipating, and later evaluating, the amount of damage that is done to human society, watersheds, and forests by land-falling storms. The economic and ecological vulnerability of coastal regions are also studied and are supported by case studies which examine the potential hazards related to the evacuation of populated areas, including medical facilities. These studies provide decision makers with a potential basis for developing improved evacuation techniques.
