REVIEW OF ORGANIC NOMENCLATURE ALKANES ALKENES ALKYNES

- I like science fiction in a generalized idea, but sometimes in particular it doesn't work. I think this is mainly because I see two kinds of science

fiction. One is what are essentially westerns in space. The second tries to give perspective on the current times by creating some sort of objective viewpoint on current events by giving it distance in space or time. Asimov is more of the second one. I haven't read much of his work as an adult, but I did like his short stories as a child in magazines. Genre stories, until lately, haven't had any pull in the academy so they don't get studied or legitimized scholastically. I like this second kind much better. I like this book, the first of a trilogy and the foundation for several others (pun intended). Asimov explores our relation to information and the predictability of the future based on full information awareness. I will read more of these books, perhaps the whole series because I enjoyed and was tantalized by the possibilities of action in the future of the series. However, one interesting thing is that although Asimov was looking to the future, he was still a product of his time. When he was writing, the technology was nuclear and the future was nuclear. Thus, the future Empire is ruled by nuclear technology. Compare, for example, the cyber-punk fascination with computer technology as a driving force. Computers are almost absent from the world of the Empire and the Foundation. Instead, there are still newspapers (96) and messages are transferred physically. At the very least, if you take this as a futurological document, humanity abandoned mythological superstition. So - you have to read this book as both a look into the future and a historical document. Asimov is a fantastic writer, but he couldn't overcome the limitations of his time.

- Everybody like to know your past and future. Everybody see it as want.
