REVIEW OF MECHANICAL ENGINEERING PE EXAM STUDY GUIDE V10

- Arthur Caplan, who is one of the U.S. major leaders in the bioethics movement, compiled this book demonstrating not only the real use of bioethics in determining the right and wrong of scientific endeavor, but also exposing the fact that in spite of all the knowledge the world has gained from the

Nazi atrocities and other questionable experimental science, there are still those who would not only use the data from these sources...but would also excuse some of people who committed these horrors in the name of science. It was to my surprise that I found this book, and later decided to buy it through Amazon. This book came about by researchers who were attempting to use and excuse the data obtained through one particularly horrific experiment done by the Nazis. There was concern that German aviators would suffer from exposure upon leaving aircraft that had been damaged in dogfights with planes from the Allies. This gave scientists the excuse to use political prisoners, captured soldiers, and Jewish prisoners as subjects in their experiments. They would dress the men as aviators would be dress and expose them to frigid water and lack of oxygen (as would be experienced by aviators at high altitudes). They would try varieties of means of re-warming these men, including absolutely ludicrous ideas that are revolting now in their simplicity and immorality...which I have no intention of discussing here. I don't know what is more amazing...that these men felt they were doing no wrong, or that some of our scientists would continue to advocate the use of the data obtained from these experiments. At least Mengele and the men behind his atrocious twins experiments had the presence of mind to know what they were doing would not be looked upon kindly. Not only did they destroy their work before the Allies could find it, but Mengele disappeared into the South American continent. The men who worked on these exposure experiments left around not only their very bad data, but pictures of themselves standing there as they slowly killed men by exposure. In 1991, a conference was held to discuss the ethical use of such experiments. Should it be used? Why, or why not? Would use of this type of scientific information constitute an insult to the dead and living survivors of these experiments, or would putting that information gained to use make their unwilling cooperation in these experiments as not having been done in vain? Or did this type of experiment, and those done at Tuskegee, and those done at Willowbrook, merely continue to advocate the use of those considered inferior, or captive populations, by scientists as morally acceptable because the needs of 'society' (as described by scientists and medical researchers) as more important than the needs of individuals? Sound familiar? It should...this question has never been morally answered and now, it is the corporations who put vulnerable populations

at risk. Only their excuse is the bottom line, and profits. Caplan collected a series of essays by those who were the victims of these and other experiments of the Nazi era. There is also input from those who would use this information in references, in their own work. There is input from bioethicists on both sides of the equation, and some input from notable American theologians. So it would seem this is an unbiased look into this question of when and who decides other human beings are of individual worth or are only of use to society as a whole. What is a bit perplexing to me is that the question needs to be asked, fifty years after the Holocaust, and thirty years after the explosive exposure of American experimental atrocities by Henry Beecher in 1966. And yet it does...and yes we do need to teach these things to the new scientists and new medical researchers, and those who would do business by pushing the moral envelope just a bit farther in the name of profit. With genetics and politics combining to form a new type of eugenics, with stem cell research, the increasing need for organ transplants, emerging diseases, and allocation of limited health care...this book should be part of the required list of those in all these areas as well as in bioethics. As theologian Neuhaus says in his chapter, "This meeting would be a failure if we were not made to feel uncomfortable." This book should make all of us feel uncomfortable. Maybe if we all were uncomfortable, the slippery slope to another medical and scientific "Holocaust" could be avoided. Karen L. Sadler, Science Education, University of Pittsburgh

- This is a really, really good book. I think Alice Hoffman does a good job with the characters and the plot. I first heard about this book from a review in Seventeen magazine and it sounded interesting so I got it out from the library. It's a touching story about two sisters, Gillian and Sally, who grow up shunned by the village children because the aunts that they live with are witches. Gillian elopes, and Sally stays until her husband dies, leaving her with two daughters who she feels are being uncannily influenced by the aunts. And then Gillian comes home with a problem. A big problem. And it's the aunts' magic that saves them in the end. A very good book that doesn't want to be put down
