This book is a practical guide to classification learning systems and their applications. These computer programs learn from sample data and make predictions for new cases, sometimes exceeding the performance of humans. Practical learning systems from statistical pattern recognition, neural networks, and machine learning are presented. The authors examine prominent methods from each area, using an engineering approach and taking the practitioner's viewpoint. Intuitive explanations with a minimum of mathematics make the material accessible to anyone--regardless of experience or special interests. The underlying concepts of the learning methods are discussed with fully worked-out examples: their strengths and weaknesses, and the estimation of their future performance on specific applications. Throughout, the authors offer their own recommendations for selecting and applying learning methods such as linear discriminants, back-propagation neural networks, or decision trees. Learning systems are then contrasted with their rule-based counterparts from expert systems.

Welcome to the tenth anniversary of the International Conference on Web Information Systems Engineering, WISE 2009. This year the WISE conference continued the tradition that has evolved from the inaugural conference held in 2000 in Hong Kong and since then has made its journey around the world: 2001 Kyoto (Japan), 2002 Singapore, 2003 Rome (Italy), 2004 Brisbane (Australia), 2005 New York (USA), 2006 Wuhan (China), 2007 Nancy (France), and 2008 Auckland (New Zealand). This year we were happy to hold the event in Poznan, a city of 600,000 inhabitants in western Poland. Poznan is the capital of the most affluent province of the country - Wielkopolska - which means "Greater Poland". For more than 1,000 years, Poznan's geographical location has predestined the city to be a significant scientific, cultural and economic center with more than just regional influence. The city is situated on the strategic cross-roads from Paris and Berlin in the west, to Warsaw and Moscow in the east, and from Scandinavia through the Baltic Sea in the north to the Balkans in the south. Poznan is a great research and university center with a dynamic potential. In all, 140,000 students are enrolled in 26 state-run and private institutions of higher education here, among which the Poznan University of Economics with its 12,000 students is one of the biggest. The WISE 2009 Conference provided a forum for engineers and scientists to present their latest findings in Web-related technologies and solutions.

Data mining is the process of extracting hidden patterns from data, and it's commonly used in business, bioinformatics, counter-terrorism, and, increasingly, in professional sports. First popularized in Michael Lewis' best-selling Moneyball: The Art of Winning An Unfair Game, it has become an intrinsic part of all professional sports the world over, from baseball to cricket to soccer. While an industry has developed based on statistical analysis services for any given sport, or even for betting behavior analysis on these sports, no research-level book has considered the subject in any detail until now. Sports Data Mining brings together in one place the state of the art as it concerns an international array of sports: baseball, football, basketball, soccer, greyhound racing are all covered, and the authors (including Hsinchun Chen, one of the most esteemed and well-known experts in data mining in the world) present the latest research, developments, software available, and applications for each sport. They even examine the hidden patterns in gaming and wagering,

## REVIEW OF COMPUTER FOOTBALL PREDICTIONS SOCCER PREDICTIONS

- This was an excellent novel, mainly because John Steinbeck made a clever, astute, and contemporary version of a modern Adam and Even/Cain and Abel story. The most exemplary attribute of East of Eden is how one can coherently see how the story of Cain and Abel is no different from the story of everyday people. Somehow I had a better understanding of Cain and Abel and the idea of "original sin" from reading this novel, which is something that's definitely worth acknowledging on Steinbeck's credit. However, there's also a major flaw to East of Eden. At times it felt a bit bombastic and pretentious. The characters were very interesting, however they felt more like biblical symbols than real characters. Obviously that was Steinbeck's purpose, but it made them appear VERY one dimensional (for instance: Why is Cathy all bad? Why is Cal the least loved? Why is Aron the most loved? Why is Cal the least liked because he has brown hair, and Aron the most loved

because he has blonde hair and blue eyes?). So therefore, it made me a bit detached from the characters, and it felt a bit unrealistic and predictable. However, despite that, there are still many scenes in the novel that felt inspiring, so much that I nearly clapped for the character (Adam) when he finally confronted his fears. It doesn't really touch on new ground about the concept of good and evil, but East of Eden is a novel worth reading at least once.

- East of Eden was stunning in its portrayal of the human soul. It encompasses the Face of Mankind with all its frailties and complexities, failures, struggles, wisdom gleaned and truth discovered in the beauty of our daily lives. The book was a canvas of the human heart- from the dark, innermost monsters and demons that haunt every last one of us to the far reaches to the summit where we discover fleeting joy and light and love. East of Eden is about forgiveness and LEARNING to forgive and acceptance and about choices and the awesome magnitude of free agency and how what each individual does affects everyone around them. East of Eden can be summed up in a word: Sublime. Read it. You won't soon forget it. It is astounding in its narrative clarity and ability to transport the reader into the heart and minds of the characters and the lessons learned within and internalize these truths. Beautiful!
