Statistics for Managers Using Microsoft Excel Cengage Learning

Designed for users already familiar with basic computer operations, Neil J. Salkind's *Excel Statistics: A Quick Guide* shows readers how to utilize the features of Microsoft® Excel to answer both simple and complex questions about data analysis. Part I explores thirty Excel functions, each one detailed on a two-

page spread. The description and use of each function appear on one page with corresponding screen shots of the function in action on the facing page, allowing the user to see what the function looks like as it is being applied. Part II of the text contains fifteen Analysis Toolpak tools, each explained using the same two-page spread design as for the functions. Excel novices and experts alike will find this text not only practical but easy to use and engaging. Key Features: - Each function and tool is accompanied by an Excel file, accessible through the SAGE Web site, to be used as an example of each analysis. Access these files through the SAGE website (www.sagepub.com/salkindexcelstats) or through www.onlinefilefolder.com. - The screenshots and steps feature Microsoft

Excel 2010 and are compatible with Microsoft 97-2003 and Excel 5.0/95. - Designed to be used as both an introduction and a reference book as needed. Perfect as an accompaniment to existing introductory statistics books or in a lab setting.

"Your book has changed my perception and attitude towards statistics. It is very well written, the language is completely user friendly and the progression of new concepts within each chapter is

fantastic. Although my class is only on chapter 5 at this point, I have found my interest in the concepts and order in which you introduce them becoming greater. I thank you with very much appreciation as I was someone who dreaded taking statistics and thought I hated it!" - Jessica Maes, graduate student

The Fourth Edition of Neil J. Salkind's bestselling text introduces students to the fundamentals of basic statistics in an informative, personable, and unintimidating way. The author expertly guides students through various statistical procedures, beginning with basic descriptive statistics and correlation and graphical representation of data and ending with inferential techniques including analysis of variance.

REVIEW OF STATISTICS WITH MICROSOFT EXCEL 4TH EDITION

- To be honest, I truly wanted this book to be true. It speaks many truths, but not the WHOLE TRUTH. How can judged sinners experience God's love in hell? How can wrath be dispensed

'lovingly'? The Bible most Christians are familiar with strongly disagrees with the author's well-intentioned advice and manmade doctrines. The Old Testament closes with a stern warning in love for those who would be turned to repent of sin (not so much repenting of religion, although religious sin is especially damning) - see Malachi for yourself. The New Testament closes with the Book of Revelation, which perhaps the author is unfamiliar with. In love it is asked that he and those who find this book having some verisimilitude to investigate how God not only feels about sin, but beast followers who refuse to repent. Love and Wrath need to be equally addressed, but once Love runs out, Wrath kicks in (about which there is nothing loving or compassionate as this book seems to

understand the concept.) Actually as the greatest act of love next to sacrificing Himself on the Cross for sin, Jesus warned His audience - and us too - more of Hell's heat than of Heaven's light. Read the Gospels for yourself as to what Jesus' emphasis was - not just to the religious, but the irreligious. A new book is needed as companion to this volume: *Repenting of Incomplete Christianity: Fairly Balancing the Wrath of God and the Warmth of God toward humanity*.

- Brenda Ueland's treatise on writing, "If You Want to Write," is a valuable addition to the library of those who want to do just that. While the language can seem a bit dated at times, the meaning shines clearly through; clearly she has taken her own advice or writing truly and focusing on the things one cares about

or is passionate about. To read it is almost to become hypnotized by her major themes: you are talented, you have a story or an observation to tell, you can write really well if you are true (not trying to be writerly), you need to enjoy the act of writing and be lazy about it, you need to relax and enjoy the beginnings in hazy territory. This is a good book to read to get you back into old habits, or to help writers re-assess their long-held and perhaps erroneous beliefs about what it actually takes to be a good writer. Ueland excerpts student writing to show examples, and the pieces she uses are very compelling, strong and true. I recommend this to writers and as gifts for writers. But I wouldn't suggest it for someone younger than 25. There is something in it that

would be offputting for someone too youthful, too inexperienced.
