## **REVIEW OF CHAPTER 2 STUDENT GUIDE WIKISPACES**

- I came to this book via a somewhat circuitous path. I was researching the use of Fast Fourier Transforms in computational finance and came to this paper: Option Valuation Using the Fast Fourier Transform (Carr, Madan 1999). That led to something called the Variance Gamma distribution. More recent papers yielded references to the CGMY model, where C is Carr, M is Madan, G is Hélyette Geman and Y is Marc Yor. And that led to Geman and this book. Despite those heavy academic

origins, the book is well-written and should be accessible to practitioners in trading system design. It's especially comprehensive in its description of energy trading. There's an entire chapter on Monte Carlo and analytic solutions for pricing Asian, barrier and quanto options, for example. Oil, gas, electricity and even coal and weather markets are covered. The book does not, for the most part, talk about financial derivatives - options and futures traded on stock indexes, currencies or interest rates.

- Conversations With Ernest Hemingway is an amazing piece of literary insight into the mind of the man who created the masterpieces. The conversions flow between the abstract and direct. His personal feelings to the world at the time of each one of his recorded

conversations and correspondence allows a Hemingway fan to scale some of his stories. The book includes conversations in opposing times. One conversation was taken just after the release of a novel and then the follow-up

ten years later which of course by Hemingway's way, only became more in depth and heart felt. This is an excellent book for anyone who can appreciate having the mind of Hemingway portrayed by his own words.
