Co-Operative Action Penguin

How much power does your human engine have? How much power do you need for running in different conditions? How can you optimize your training and racing performance? How can you use power meters to improve your results? What are the ultimate limits of human performance? The Secret of Running answers all of these questions. All factors determining the performance in running (from 800-meter race to marathon) are explained step by step: training, nutrition, body weight, running form, wind, hills, temperature, running gear, power meters and much more. Written in a crystal-clear and lively style, this book is a wealth of information for every ambitious runner. This title also contains brand new insights on how the balance of the power of your human engine and the power requirement for running in different conditions determines your performance. It shows how power meters can be used to optimize your training, running economy and race result. This book is lavishly illustrated and packed with useful data. Being already a bestseller in the Netherlands and Belgium, *The Secret of Running* can be considered the ultimate textbook for all serious runners and their coaches.

A tightly argued and expansive examination of the pitfalls of transhumanism that reacquaints us with what it means to live well. Advocates of transhumanism, or "radical" enhancement, urge us to pursue the biotechnological heightening of select capacities - above all, cognitive ability - so far beyond any human limit that the beings with those capacities would exist on a higher ontological plane. For proponents of such views, humanity's self-transcendence through advancements in science and technology may even be morally required. Consequently, the human stakes of how we respond to transhumanism are immeasurably high. In *Posthuman Bliss? The Failed Promise of Transhumanism*, Susan B. Levin challenges transhumanists' overarching commitments regarding the mind and brain, ethics, liberal democracy, knowledge, and reality, showing their notion of humanity's self-transcendence into "posthumanity" to be little more than fantasy. Uniting philosophical with scientific arguments, Levin mounts a significant challenge to transhumanists' claim that science and technology support their vision of posthumanity. In a clear and engaging style, she dismantles transhumanists' breezy assurances that posthumans will emerge if we but allocate sufficient resources to that end. Far from offering theoretical and practical "proof of concept" for the vision that they urge upon us, Levin argues, transhumanists engage inadequately with cognitive psychology, biology, and neuroscience, often relying on questionable or outdated views within those fields. Having shown in depth why transhumanism should be rejected, Levin argues forcefully for a holistic perspective on living well that is rooted in Aristotle's virtue ethics but that is adapted to liberal democracy. This holism is thoroughly human, in the best of senses: It directs us to consider worthy ends for us as human beings and to do the irreplaceable work of understanding ourselves rather than relying on technology and science to be our salvation.

Astronomy is written in clear non-technical language, with the occasional touch of humor and a wide range of clarifying illustrations. It has many analogies drawn from everyday life to help non-science majors appreciate, on their own terms, what our modern exploration of the universe is revealing. The book can be used for either a one-semester or two-semester introductory course (bear in mind, you can customize your version and include only those chapters or sections you will be teaching.) It is made available free of charge in electronic form (and low cost in printed form) to students around the world. If you have ever thrown up your hands in despair over the spiraling cost of astronomy textbooks, you owe your students a good look at this one. Coverage and Scope Astronomy was written, updated, and reviewed by a broad range of astronomers and astronomy educators in a strong community effort. It is designed to meet scope and sequence requirements of introductory astronomy courses nationwide. Luca Missoni is an Italian photographer passionate of astronomy. The Moon has always been at the center of his artistic research. For more than twenty years he has been realizing a photographic project which explores the Moon focusing on the tension between reality and imagination. In his childhood he started to observe the Moon with a telescope, collecting maps and books. With the myth of the Moon increasing its charm since the Sixties, with its explorations, Missoni has been more and more involved up to pursue a project for a personal Atlas of the heavenly body. The book is structured in two main sections: a first part with an obsessive and rigorous representation of the Moon in all its phases; a second part with its interpretation in a continuous testing of colors and composition of different phases. The result is a personal trip around the Moon with a representation of the visible side of our satellite, in a continuous tension towards the shadowed and hidden part.

Physics of the Life Sciences Walter de Gruyter

A new collection of short fiction from the Edgar Award-winning author of *Devil in a Blue Dress* and *Trouble is What I Do*. With his extraordinary fiction and gripping television writing, Walter Mosley has proven himself a master of narrative tension. *The Awkward Black Man* collects seventeen of Mosley's most accomplished short stories to showcase the full range of his remarkable talent. Touching, contemplative, and always surprising, these stories introduce an array of imperfect characters—awkward, self-defeating, elf-involved, or just plain odd. In *The Awkward Black Man*, Mosley overturns the stereotypes that corral black male characters and paints subtle, powerful portraits of unique individuals. In "The Good News Is," a man's insecurity about his weight gives way to illness and a loneliness so intense that he'd do anything for a little human comfort. "Pet Fly," previously published in the *New Yorker*, follows a man working as a mailroom clerk—a solitary job for which he is overqualified—and the unforeseen repercussions he endures when he attempts to forge a new connection. And "Almost Alyce" chronicles failed loves, family loss, alcoholism, and a Zen approach to the art of begging that proves surprisingly effective.

Named a Best Book of 2020 by NPR and Vanity Fair One of Smithsonian's Ten Best Science Books of 2020 "A searching and vital explication of germ theory, social norms, and what the modern era is really doing to our bodies and our psyches." —Vanity Fair A preventative medicine physician and staff writer for *The Atlantic* explains the surprising and unintended effects of our hygiene practices in this informative and entertaining introduction to the new science of skin microbes and probiotics. Keeping skin healthy is a booming industry, and yet it seems like almost no one agrees on what actually works. Confusing messages from health authorities and ineffective treatments have left many people desperate for reliable solutions. An enormous alternative industry is filling the void, selling products that are often of questionable safety and totally unknown effectiveness. In *Clean*, doctor and journalist James Hamblin explores how we got here, examining the science and culture of how we care for our skin today. He talks to dermatologists, microbiologists, allergists,

immunologists, aestheticians, bar-soap enthusiasts, venture capitalists, Amish people, theologians, and straight-up scam artists, trying to figure out what it really means to be clean. He even experiments with giving up showers entirely, and discovers that he is not alone. Along the way, he realizes that most of our standards of cleanliness are less related to health than most people think. A major part of the picture has been missing: a little-known ecosystem known as the skin microbiome—the trillions of microbes that live on our skin and in our pores. These microbes are not dangerous; they're more like an outer layer of skin that no one knew we had, and they influence everything from acne, eczema, and dry skin, to how we smell. The new goal of skin care will be to cultivate a healthy biome—and to embrace the meaning of “clean” in the natural sense. This can mean doing much less, saving time, money, energy, water, and plastic bottles in the process. Lucid, accessible, and deeply researched, Clean explores the ongoing, radical change in the way we think about our skin, introducing readers to the emerging science that will be at the forefront of health and wellness conversations in coming years.

Women and Other Monsters Houghton Mifflin Harcourt

A memoir by the mustachioed baseball pitcher who went playing rocky, trash-ridden fields in Castro's Cuba to becoming a Boston Red Sox legend. Luis Tiant is one of the most charismatic and accomplished players in Boston Red Sox and Major League Baseball history. With a barrel-chested physique and a Fu Manchu mustache, Tiant may not have looked like the lean, sculpted ace he usually played against, but nobody was a tougher competitor on the diamond, and few were as successful. There may be no more qualified twentieth-century pitcher not yet enshrined in the National Baseball Hall of Fame. His big-league dreams came at a price: racism in the Deep South and the Boston suburbs, and nearly fifteen years separated from a family held captive in Castro's Cuba. But baseball also delivered World Series stardom and a heroic return to his island home after close to a half-century of forced exile. The man whose name—"El Tiante"—became a Fenway Park battle cry has never fully shared his tale in his own words, until now. In *Son of Havana*, Tiant puts his heart on his sleeve and describes his road from torn-up fields in Havana to the pristine lawns of major league ballparks. Readers will share Tiant's pride when appeals by a pair of US senators to baseball-fanatic Castro secure freedom for Luis's parents to fly to Boston and witness the 1975 World Series glory of their child. And readers will join the big-league ballplayers for their spring 2016 exhibition game in Havana, when Tiant—a living link to the earliest, scariest days of the Castro regime—threw out the first pitch.

REVIEW OF PULSAR BIKE DIGITAL METER

- The 1930's were a time when a major research program reached its peak. Late 19th century economists had grappled with capital theory, money, and interest (i.e. WickSELL, Bohm Bawerk). Those who followed (Mises and Lindal) developed capital/interest theory along different lines. But it was Hayek and Keynes who squared off before all other economists to see which line of theorizing could explain The Great Depression. This volume reprints original writings of Hayek, Keynes and Sraffa during the early 1930's. At this time Hayek held the upper hand with professional opinion. Hayek's lectures at the London School of Economics (published as *Prices and Production*) won him many adherents. Keynes and Sraffa advanced forceful counterarguments, but little changed at this time. The fact of the matter is that both Keynes and Hayek went on to refine their views. Hayek published his *Pure Theory of Capital* in 1941, where he made penetrating insight (some would say impenetrable) into capital theory. Keynes went on to win over professional opinion with his *General Theory of Employment, Interest, and Money* (1936). Hayek was in one sense more fortunate than Keynes. Keynes won a hollow victory in 1936, as Keynesians (i.e. Hicks, Samuelson, Solow...) quickly forgot about what Keynes actually wrote and recast `his' theory almost beyond recognition. Hayekians (i.e. Lachmann, Garrison, White) have remained truer to their namesake. It is in this history where this volume has value. Those interested in the history of economics can gain much insight from this book. This time period was critical in the development of modern economics. Somehow the two most prominent economists of the 1930's managed both to lose public opinion as postwar economists turned to a theory of stationary equilibrium that both Hayek and Keynes rejected, and in the name of the latter. Do not read this book to understand the views of Hayek or Keynes. Read this book to see the early development of Hayekian and Keynesian economics. There is a real historical puzzle to solve here.

- Chekhov at is best. This perennial work, more actual than ever, tells the story of a community trapped in a "melancholy loop" that hinders their access to the current realities, the efforts of a lucid entrepreneur to extricate his fellows from the bewilderment and the hint at a new generation that wont be sentimental about it all.
