#1 New York Times Bestseller
Legendary venture capitalist John Doerr reveals how the goal-setting system of Objectives and Key Results (OKRs) has helped tech giants from Intel to Google achieve explosive growth—and how it can help any organization thrive. In the fall of 1999, John Doerr met with the founders of a start-up whom he'd just given \$12.5 million, the biggest investment of his career. Larry Page and Sergey Brin had amazing technology, entrepreneurial energy, and sky-high

ambitions, but no real business plan. For Google to change the world (or even to survive), Page and Brin had to learn how to make tough choices on priorities while keeping their team on track. They'd have to know when to pull the plug on losing propositions, to fail fast. And they needed timely, relevant data to track their progress—to measure what mattered. Doerr taught them about a proven approach to operating excellence: Objectives and Key Results. He had first discovered OKRs in the 1970s as an engineer at Intel, where the legendary Andy Grove ("the greatest manager of his or any era") drove the best-run company Doerr had ever seen. Later, as a venture

capitalist, Doerr shared Grove's brainchild with more than fifty companies. Wherever the process was faithfully practiced, it worked. In this goal-setting system, objectives define what we seek to achieve; key results are how those top-priority goals will be attained with specific, measurable actions within a set time frame. Everyone's goals, from entry level to CEO, are transparent to the entire organization. The benefits are profound. OKRs surface an organization's most important work. They focus effort and foster coordination. They keep employees on track. They link objectives across silos to unify and strengthen the entire company. Along the way, OKRs

enhance workplace satisfaction and boost retention. In *Measure What Matters*, Doerr shares a broad range of first-person, behind-the-scenes case studies, with narrators including Bono and Bill Gates, to demonstrate the focus, agility, and explosive growth that OKRs have spurred at so many great organizations. This book will help a new generation of leaders capture the same magic.

Science, engineering, and technology permeate nearly every facet of modern life and hold the key to solving many of humanity's most pressing current and future challenges. The United States' position in the global economy is declining, in part because U.S. workers lack fundamental knowledge in these fields. To address the critical issues of U.S. competitiveness and to better prepare the workforce, A Framework for K-12 Science Education

proposes a new approach to K-12 science education that will capture students' interest and provide them with the necessary foundational knowledge in the field. A Framework for K-12 Science Education outlines a broad set of expectations for students in science and engineering in grades K-12. These expectations will inform the development of new standards for K-12 science education and, subsequently, revisions to curriculum, instruction, assessment, and professional development for educators. This book identifies three dimensions that convey the core ideas and practices around which science and

engineering education in these grades should be built. These three dimensions are: crosscutting concepts that unify the study of science through their common application across science and engineering; scientific and engineering practices; and disciplinary core ideas in the physical sciences, life sciences, and earth and space sciences and for engineering, technology, and the applications of science. The overarching goal is for all high school graduates to have sufficient knowledge of science and engineering to engage in public discussions on science-related issues, be careful consumers of scientific and technical information, and enter the careers

of their choice. A Framework for K-12 Science Education is the first step in a process that can inform state-level decisions and achieve a research-grounded basis for improving science instruction and learning across the country. The book will guide standards developers, teachers, curriculum designers, assessment developers, state and district science administrators, and educators who teach science in informal environments.

Atomic Habits John

Wiley & Sons

#1 New York Times Bestseller “THIS. This is the right book for right now. Yes, learning requires focus. But, unlearning and relearning requires much more—it requires choosing courage over comfort. In *Think Again*, Adam Grant weaves together research and storytelling to help us build the intellectual and emotional muscle we need to stay curious enough about the world to actually change it. I’ve never felt so hopeful about what I don’t know.”

—Brené Brown, Ph.D., #1 New York Times bestselling author of *Dare to Lead* The bestselling author of *Give and Take* and *Originals* examines the critical art of rethinking: learning to

question your opinions and open other people's minds, which can position you for excellence at work and wisdom in life Intelligence is usually seen as the ability to think and learn, but in a rapidly changing world, there's another set of cognitive skills that might matter more: the ability to rethink and unlearn. In our daily lives, too many of us favor the comfort of conviction over the discomfort of doubt. We listen to opinions that make us feel good, instead of ideas that make us think hard. We see disagreement as a threat to our egos, rather than an opportunity to learn. We surround ourselves with people who agree with our conclusions, when we should be

gravitating toward those who challenge our thought process. The result is that our beliefs get brittle long before our bones. We think too much like preachers defending our sacred beliefs, prosecutors proving the other side wrong, and politicians campaigning for approval--and too little like scientists searching for truth. Intelligence is no cure, and it can even be a curse: being good at thinking can make us worse at rethinking. The brighter we are, the blinder to our own limitations we can become.

Organizational psychologist Adam Grant is an expert on opening other people's minds--and our own. As Wharton's top-rated professor and the

bestselling author of *Originals* and *Give and Take*, he makes it one of his guiding principles to argue like he's right but listen like he's wrong. With bold ideas and rigorous evidence, he investigates how we can embrace the joy of being wrong, bring nuance to charged conversations, and build schools, workplaces, and communities of lifelong learners. You'll learn how an international debate champion wins arguments, a Black musician persuades white supremacists to abandon hate, a vaccine whisperer convinces concerned parents to immunize their children, and Adam has coaxed Yankees fans to root for the Red Sox. *Think Again* reveals that we

don't have to believe everything we think or internalize everything we feel. It's an invitation to let go of views that are no longer serving us well and prize mental flexibility over foolish consistency. If knowledge is power, knowing what we don't know is wisdom.

HBR's 10 Must Reads on Leadership, Vol. 2 (with bonus article "The Focused Leader" By Daniel Goleman) Vanguard Press

Brings together a diversity of research on goal-driven learning to establish a broad, interdisciplinary framework that describes the goal-driven learning process. In cognitive science, artificial intelligence,

psychology, and education, a growing body of research supports the view that the learning process is strongly influenced by the learner's goals. The fundamental tenet of goal-driven learning is that learning is largely an active and strategic process in which the learner, human or machine, attempts to identify and satisfy its information needs in the context of its tasks and goals, its prior knowledge, its capabilities, and environmental opportunities for learning. This book brings together a diversity of research on goal-driven learning to establish a broad, interdisciplinary framework that describes the goal-driven learning process. It collects and

solidifies existing results on this important issue in machine and human learning and presents a theoretical framework for future investigations. The book opens with an overview of goal-driven learning research and computational and cognitive models of the goal-driven learning process. This introduction is followed by a collection of fourteen recent research articles addressing fundamental issues of the field, including psychological and functional arguments for modeling learning as a deliberative, planful process; experimental evaluation of the benefits of utility-based analysis to guide decisions about what to learn; case studies of computational models in which learning is driven by reasoning about learning goals; psychological evidence for human goal-driven learning; and the ramifications of goal-driven learning in educational contexts. The second part of the book presents six position papers reflecting ongoing research and current issues in goal-driven learning. Issues discussed include methods for pursuing psychological studies of goal-driven learning, frameworks for the design of active and multistrategy learning systems, and methods for selecting and balancing the goals that drive learning. [The Goal Discussion Guide](#) NORTH RIVER PressINC

Early in 2015, I volunteered to lead a reading discussion group at work. The book I chose to read

was "The Goal" by Eliyahu Goldratt. I scoured the internet for a reading and discussion guide appropriate for a weekly group session and could not discover any. I found plenty of synopses and some college syllabi, but not any discussion guides. So I decided to create one. This book is the discussion guide I created. Because "The Goal" uses the Socratic Method - "ask - tell - ask", I decided to create the readings in that same method. Each week's reading begins with Alex asking a question of Jonah, then Jonah's response, Alex learning from that answer, and then the next question posed by Alex. The discussion guide is broken into 7 weeks of reading. Each week has questions to

be answered by the participants. Some weeks have exercises (for instance, the dice game played on the hike) to further illustrate the concepts discussed in the book. It will be helpful if the leader can customize the discussion questions and exercises to the organization.

There has been a shift of policy at board level. Cash is needed and Alex Rogo's companies are to be put on the block. Alex faces a cruel dilemma. If he successfully completes the turnaround of his companies they can be sold for the maximum return: if he fails they will be closed down. Either way Alex and his team will be out of work. It looks like lose-lose, both for Alex and

for his team. And as if he doesn't have enough to deal with, his two children have become teenagers. As Alex grapples with problems at work and at home, we begin to understand the full scope of Eli Goldratt's powerful techniques. It's Not Luck reveals more of the Thinking Process-techniques that consistently produce win-win solutions to seemingly impossible problems.

REVIEW OF THE GOAL A PROCESS OF ONGOING IMPROVEMENT 30TH ANIVERSARY EDITION

- A stunning and brilliant work - Christ as the hinge of history and culture. When I was choosing btw books by Chesterton, I asked for advice from Fr. John McCloskey, then head of the Catholic Information Center in Washington,

DC. I was considering "Orthodoxy" and "The Everlasting Man," and I asked Fr. M which one he'd recommend, if I had to choose. He said 'they are both excellent, but...' "The Everlasting Man" is Chesterton at the height of his maturity.

- I can't help but smile while skimming over some of the previous criticisms and praises for Chesterton. They are what one should expect after having read this work. For instance, one reviewer (Sam) seems to be terribly confused about the issues. His claim that GK's argument in the beginning of the book is meaningless is based on his misunderstanding of important distinctions one must have upon reading this book. One, which was the whole

point of his argument against materialistic evolution, was that the difference between the mind of a man and that of a different animal was one of KIND and not degree like Chesterton so emphatically and explicitly stated (for instance humans create art, think rationally, have the desire and the ability to write poetry, etc, etc). These are the things that did not start in the mind of an animal and grow "exponentially" into evolved species like man. These are the things that began in the mind of man, and did not exist previously whatsoever. These are the Creation of man, or rather the creation of God manifested in the mind of man. Sam attempts to refute this

argument by showing that the minds of different animals differ in degree. This does not even touch Chesterton's argument. Neither does his point that GK doesn't take on the argument scientifically. But, why should he? This brings us to the next distinction one must understand. That is between a materialistic, godless evolution and merely evolution as a scientific explanation. Chesterton doesn't argue against the latter and even states he has no problem in believing it. What he does argue against is the former which is certainly a philosophical or metaphysical question. And this is where he takes it on. Secondly, I really think Chesterton

would lament to find people considering him sarcastic and aggressive in a negative manner. For the truth is, nothing could be the reverse. This book is what Chesterton was: fun. He is too light hearted to be taken seriously when he is sarcastic. He is only sarcastic in a playful, jesting manner. And I believe he was driven to do so in order to keep his sanity from the millions of utterly silly criticisms he read and heard from so many people who were too lazy and dishonest to think things through before they hastily chastised the truth. Instead of getting angry, he laughed at their silliness and exposed it with so much wit as to make everyone join him in a merriment of

laughter. This brings us to Chesterton's style, which some of those, who liked the purpose of the book, didn't enjoy. It is a shame because I prefer his style immeasurably to most authors I've read. It is almost my favorite part. I know when I read Chesterton I will learn many truths (and indeed the most unexpected and extraordinary ones which he instinctively pursued) but what I enjoy to a nearly equal measure is the manner in which they are conveyed. The shame is that his style is dead, which is why I think many people of our time do not appreciate it; they are completely unaccustomed to its alarming beauty. Although it is unique, Chesterton has a very classic style of writing

as opposed to what is most common today... the practical, straightforward approach. GK writes like he is painting a picture, it is in fact because this is what he does and no one of our time writes non-fiction this way. He writes non-fiction as if it is a piece of literature filled with all the devices that make literature so enjoyable and moving. Chesterton remarked near the end of the book, that Christianity is the one religion where the two halves of the brain meet, where the philosopher and the priest kiss for the first time, where the art and imagination of a story coincides with rigorous rational thought and theology. Nothing could be more true of Chesterton's own writing. Some say

he is a masterful logician. He is, but the beauty is that he is so much more. This book has the quality of being written both by a child and a sage. "Both a baby and an old man walk with difficulty; but he who shall expect the old gentleman to lie on his back, and kick joyfully instead, will be disappointed." Chesterton refuted his own point, by his very life, for he did kick joyfully. His perspectives are all so fresh and new as if he sees the whole world for the first time coming out of his mother's womb. Combined with his "colossal genius" (as Bernard Shaw put it), his writing makes for this most sublime tandem. And this refutes the worst of all arguments made by a reviewer. That Chesterton tried to fit the facts in with his beliefs, that he was prejudiced and distasteful, as if it wasn't his aim to find truth. It is a well known fact that Chesterton did the very opposite, he came to the faith after reading nothing (philosophically that is) except skeptical writings. This is precisely why Chesterton is so good at apologetics. Most of the time he doesn't even need to be novel, he merely refutes the skeptics by the very arguments of the skeptics, and he does it with such alarming frequency. GK is driven to writing this book artistically and poetically not only because it is his style, and a better read, but because many of the

points of this book are ones which are obvious to him but nevertheless very subtle, although important. Chesterton never rambles to no end. What he does is move in many directions in his scattered mind, almost errantly, but always coming back to a point, as sharp and piercing as a spear (to steal an analogy). He never in reality rambles, it is just that the picture is so large and filled with such rich subtlety that he moves in great lengths to paint the

whole thing before it is done. This is why no paragraph, or even page, he writes should be read in isolation or great misinterpretations will naturally occur (especially by those who so naturally jump to criticize before being thoughtful and deliberate which is what Chesterton so clearly and passionately disliked). This is also why this book and much of his writing is very enjoyable and enriching to read many times over.
