Now a television mini-series airing on National Geographic May 2020! A Washington Post Best Book of the Year & a New York Times Notable Book From the Pulitzer Prize-winning author of *The Shipping News* and *"Brokeback Mountain,"* comes the New York Times bestselling epic about the demise of the world's forests: *"Barkskins* is grand entertainment in the tradition of Dickens and Tolstoy...the crowning achievement of Annie Proulx's distinguished career, but also perhaps the greatest environmental novel ever written" (San Francisco Chronicle). In the late seventeenth century two young Frenchmen, René Sel and Charles Duquet, arrive in New France. Bound to a feudal lord for three years in exchange for land, they become wood-cutters—barkskins. René suffers extraordinary hardship, oppressed by the forest he is charged with clearing. He is forced to marry a native woman and their descendants live trapped between two cultures. But Duquet runs away, becomes a fur trader, then sets up a timber business. Annie Proulx tells the stories of the descendants of Sel and Duquet over three hundred years—their travels across North America, to Europe, China, and New Zealand—the revenge of rivals, accidents, pestilence, Indian attacks, and cultural annihilation. Over and over, they seize what they can of a presumed infinite resource, leaving the modern-day characters face to face with possible ecological collapse. "A stunning, bracing, full-tilt ride through three hundred years of US and Canadian history...with the type of full-immersion plot that keeps you curled in your chair, reluctant to stop reading" (Elle), *Barkskins* showcases Proulx's inimitable genius of creating characters who are so vivid that we follow them with fierce attention. "This is Proulx at the height of her powers as an irreplaceable American voice" (Entertainment Weekly, Grade A), and *Barkskins* "is an awesome monument of a book" (The Washington Post)—"the masterpiece she was meant to write" (The Boston Globe). As Anthony Doerr says, "This magnificent novel possesses the dark humor of *The Shipping News* and the social awareness of *'Brokeback Mountain.'*"

"*Becoming Great Universities* arose from co-author Richard J. Light's visits over the past twenty years to more than 250 campuses and his conversations with presidents, administrators, faculty, and students. Light and co-author Allison Jegla have distilled the topics arising from these conversations into the ten chapters that frame their book, with emphasis on the prospect of promoting a culture of continuous innovation for creating value for students. This book is precisely about the university's teaching and student development mission-not research. The overwhelming evidence in the higher education literature asserts that it is on the teaching and education side that our colleges and universities are most challenged, and therefore that is where the greatest improvements can and must be made. Light and Jegla's message to higher education leaders is that improving performance depends to a great extent on their purposeful development of the institution's culture as a community, and on leveraging this culture through the encouragement of constructive working relationships across all sectors of campus, including administration, staff, faculty, and students. Their chapters cover the following topics: how to help students from under-resourced backgrounds; how to encourage students to invest their time and talents beneficially; how to attract students from non-traditional backgrounds to campus; how to improve learning outcomes through innovative teaching; how to assess learning; how to productively elicit student opinions, ideas, and advice; how to facilitate constructive interaction among students from differing backgrounds; how to build opportunities for lifelong learning; and how to inspire students to think globally. Throughout their book, Light and Jegla emphasize practical lessons for promoting measures of innovation on each front. With a broad spectrum of institutions in mind, the authors present dozens of no-cost or low-cost, actionable initiatives that faculty, university leaders, and even students can implement, always in the spirit of working toward their campus's sustained improvement over time"--

This book provides an analytical exploration of the condition of teachers working in expanding school systems across the world, with a particular focus on the lives of women teachers in rural Sub-Saharan Africa. Drawing from award-winning research, it looks beyond the official portrayals of teachers' lives in order to better understand the reality of the contexts in which teachers live and work. Positioning Amartya Sen's capability approach at the heart of the study, each chapter considers documentary evidence alongside ethnographic research from rural, remote and under-resourced schools in Ghana, Nigeria, Kenya, South Africa and Sudan. Interweaving rich narratives from teachers in a variety of contexts, the book proposes a concept of professional capability and examines female teachers' agency to pursue and achieve this in their classrooms. This key examination challenges existing notions of 'quality education' and reveals insights into the broader purpose of schooling for rural communities. *Quality Teaching and the Capability Approach* will be of value to researchers, academics and postgraduate students in education, particularly those concerned with gender, development and teaching, as well as educationalists and policy makers concerned with education and development.

In spite of soaring tuition costs, more and more students go to college every year. A bachelor's degree is now required for entry into a growing number of professions. And some parents begin planning for the expense of sending their kids to college when they're born. Almost everyone strives to go, but almost no one asks the fundamental question posed by *Academically Adrift*: are undergraduates really learning anything once they get there? For a large proportion of students, Richard Arum and Josipa Roksa's answer to that question is a definitive no. Their extensive research draws on survey responses, transcript data, and, for the first time, the state-of-the-art Collegiate Learning Assessment, a standardized test administered to students in their first semester and then again at the end of their second year. According to their analysis of more than 2,300 undergraduates at twenty-four institutions, 45 percent of these students demonstrate no significant improvement in a range of skills—including critical thinking, complex reasoning, and writing—during their first two years of college. As troubling as their findings are, Arum and Roksa argue that for many faculty and administrators they will come as no surprise—instead, they are the expected result of a student body distracted by socializing or working and an institutional culture that puts undergraduate learning close to the bottom of the priority list. *Academically Adrift* holds sobering lessons for students, faculty, administrators, policy makers, and parents—all of whom are implicated in promoting or at least ignoring contemporary campus culture. Higher education faces crises on a number of fronts, but Arum and Roksa's report that colleges are failing at their most basic mission will demand the attention of us all.

A Personal Perspective Simon and Schuster

The design of school curriculums involves deep thought about the nature of knowledge and its value to learners and society. It is a serious responsibility that raises a number of questions. What is knowledge for? What knowledge is important for children to learn? How do we decide what knowledge matters in each school subject? And how far should the knowledge we teach in school be related to academic disciplinary knowledge? These and many other questions are taken up in *What Should Schools Teach?* The blurring of distinctions between pedagogy and curriculum, and between experience and knowledge, has served up a confusing message for teachers about the part that each plays in the education of children. Schools teach through subjects, but there is little consensus

about what constitutes a subject and what they are for. This book aims to dispel confusion through a robust rationale for what schools should teach that offers key understanding to teachers of the relationship between knowledge (what to teach) and their own pedagogy (how to teach), and how both need to be informed by values of intellectual freedom and autonomy. This second edition includes new chapters on Chemistry, Drama, Music and Religious Education, and an updated chapter on Biology. A revised introduction reflects on emerging discourse around decolonizing the curriculum, and on the relationship between the knowledge that children encounter at school and in their homes.

REVIEW OF THINGS UNIVERSITY DOESN T TEACH YOU

- Bello did an amazing job with her book. I support and respect everything she sponsors and represents in the marijuana community.

- This book accomplishes what it sets out to do. It fulfills all the stipulations of an apologetics novel. However, the manner in which it does so follows in step more along the lines of a textbook than it does a literary instrument. Contrary to this insight, I found the book to be an overall good experience; something that religious study does not always turn out to be. The book, as all things do, carried with it its pros and cons. On the negative side, it is strikingly unbelievable in the sense that Michael, having little deep interpretation of the bible prior to that summer, could interpret the plethora of pages that make up our Catholic Bible. Aside from this point, the book brought very good insight to the false allegations, (made with little understanding), of the Fundamentalists. Mr. De Porres was able to bring forth good arguments on a range of topics; from the worship of Mary, to the institution of Papal authority. All in all, I believe that this book has been a positive tool in my religious life, and I may be consulting it in the future.
