Personal data is increasingly important in our lives. We use personal data to quantify our behaviour, through health apps or for 'personal branding' and we are also increasingly forced to part with our data to access services. With the proliferation of embedded sensors, the built environment is playing a key role in this developing use of data, even though this remains relatively hidden. Buildings are sites for the capture of personal data. This data is used to adapt buildings to people's behaviour, and increasingly, organisations use this data to understand how buildings are occupied and how communities develop within them. A whole host of technical, practical, social and ethical challenges emerge from this still developing area across interior, architectural and urban design, and many open questions remain. This book makes a contribution to this on-going discourse by bringing together a community of researchers interested in

personal informatics and the design of interactive buildings and environments. The book's aim is to foster critical discussion about the future role of personal data in interactions with the built environment. *People, Personal Data and the Built Environment* is ideal for researchers and practitioners interested in Architecture, Computer Science and Human Building Interaction.

Covering the period from the publication of Thomas Chippendale's *The Gentleman and Cabinet-Makers' Director* (1754) to the Great Exhibition (1851), this book analyses the relationships between producer retailers and consumers of furniture and interior design, and explores what effect dialogues surrounding these transactions had on the standardisation of furniture production during this period. This study examines the role of pattern books and their readers; the construction of taste and style through negotiation; and daily interactions through showrooms and other services, to reveal the complexities of English material culture in a period of industrialisation.

Mixed reality is an area of computer research that deals with the combination of real-world and computer-generated data, where computer-generated objects are visually mixed into the real environment and vice versa in real time. It is the newest virtual reality technology. It usually uses 3D computer graphics technologies for visual presentation of the virtual world. The mixed reality can be created using the following technologies: augmented reality and augmented virtuality. Mixed and virtual reality, their applications, 3D computer graphics and related technologies in their actual stage are the content of this book. 3D-modeling in virtual reality, a stereoscopy, and 3D solids reconstruction are presented in the first part. The second part contains examples of the applications of these technologies, in industrial, medical, and educational areas.

The word 'house' has evolved throughout the millennia and infused itself into many languages; however, the basic reference to covering and sheltering has always been preserved. Housing in the contemporary sense refers to a relatively complex structure comprising different shapes and sizes accommodating various

functionalities, evolving in accordance with cultural, social, technological, and natural progresses. A house provides more than basic protection, but is the backdrop for the daily lives of occupants, and even a reflection of an individual's character, beliefs, and socioeconomic status. This book discusses an array of critical contemporary issues on housing design pertaining to sustainable practices, emerging technologies, heritage conservation, humanitarian efforts, fictional environments and their effects on occupants' physical and psychological experience and well-being. As such, it will serve to develop further understanding and to enrich the perspectives of any designer and educator invested in the subject.

Knowledge. The book will be of particular interest to researchers, developers and users of advanced computation in design across all disciplines, and to all readers who need to gain a better understanding of designing.

Re-Coding Homes Through Flexible Interiors: Emerging Research and Opportunities IGI Global

This project provides the public with an attractive and interactive interior design application using Augmented Reality. Nowadays, there are a lot of people familiar with the computer system and communication technologies. Hence this exploring the prospect of a new form of Virtual Reality (VR) application called Augmented Reality (AR) technology develops more rapidly. Augmented reality is a field of research which deals with the combination of real-world and virtual environment. It is an environment that applies between virtual reality and real environment. There are several problems induce me to create an interior design application in AR. Nowadays, people are busy with their work. People are no time to go to various stores to buy furniture for their home, shop or office. There is difficult to fulfil the customers contentment of decorate their room without imaginary picture to refer. Printed furniture catalog is basically a paper based information with lots of texts and images which does not provide any interaction for the user. And people can't view a better graphics of visualization because the design layout is statically presented on papers. Due to that, AR and 3D technology must be applied into interior design area. It is an application which includes furniture and furnishings will develop in three-dimensional surface of object and present by using

augmented reality. It will perform the interactive and attract the attention from the public. In this project, I choose Waterfall methodology as a guideline to develop my product throughout this project. By having a methodology, I can carry out my project successfully. As we know, augmented reality technology is still new in our country, but it is a fact that AR technologies would potentially to be the future technology trend to the public.

REVIEW OF INTERACTIVE FURNITURE LAYOUT USING INTERIOR DESIGN GUIDELINES

- As a seasonal guide in Vietnam and Cambodia for each of the past seven years, many people ask me how they should prepare for their trip to the region. I always recommend this guide. My work requires extensive research and I read a lot of guidebooks and this one is the only one with any decent accuracy and thoroughness. I also think Buckley is simply a good writer. Aside from Tom Brosnahan's Turkey guidebook for Lonely Planet, I think it is perhaps the best written one out right now. And I find his particular humor makes light of what can be trying circumstances and boring details. By the way, the current edition has been updated with a lot of information from as recent as 1997 (about as recent as you can get in any guidebook of the area published in 1998 I am afraid).
- After a series of shopping excursions leave her captivated with Amish dolls and quilts, affluent American Sue Bender attempts to impose herself on an Amish family in order to use their community as a personal spiritual retreat. The result: A pseudo-spiritual journey culminating in this short, self-indulgent, ethnocentric work. Sue Bender is not an ethnographer, and PLAIN AND SIMPLE is not an ethnography. However, in between vapid musings, Bender devotes about 40% of her pages to accounts of her experiences living with two Amish families for a few months.

This is the part of the book that's actually interesting, because the more the ego gets out of the way, the clearer our view of a fascinating culture and community. During her stay, Bender even manages to cast-off a few of her own prejudices and stereotypes about the Amish people. Although she admits that she expected a prompt spiritual breakthrough, her introspection yields tidy and conciliatory conclusions. She decides that, tragically, it isn't in her "nature" to be "calm", then labels this epiphany a triumph. But there's trouble in paradise. Bender's pap analysis of the Amish identifies several "paradoxes". In science, the emergence of paradoxes tends to indicate a flawed theoretical model, but we shouldn't let something like that get in the way of convenient, superficial interpretations of a multifaceted cultural ethos. I don't think Bender ever wanted to identify or understand the Amish. Because if she did, then they would cease to be a novelty. When she returns from her first visit to an Amish community in Iowa, Bender remodels her kitchen entirely in synthetic materials, then attempts to explain to us how significant and appropriate this was. Years later--but only a few paragraphs after comparing herself to a "Zen monk"--she finally admits that cultivating a focused, Amish-like calm might actually require some sort of inward, self-actualized change. At least that's something. Mrs. Bender, please grace us all with a follow-up work when you have your next spiritual awakening while hat-shopping in Tibet.
