## **REVIEW OF 3 1 TOTAL 6 MARKS MOULSHAMHIGHSEXH**

- Every few years, someone who's not a scientist announces that the state of the Earth is improving and that the future looks so bright you gotta wear shades. The easiest way to convince a person of an untruth is to make the lie one they already want to believe is true. Throw in the conspiracy theory that scientists, politicians, and environmental organizations have something to gain by scaring the public and you've got a bestseller!The scientific basis of this book is pure rubbish and scientists on both sides of the Atlantic have already

trashed Lomborg's book. Among the most informative are a collection of reviews in Scientific American (January 2002). I will not waste my time reiterating what others have already done so well.However, I will point out that Lomborg's methods are those of a polemic rather than of someone that is honestly interested in "Measuring the Real State of the World." The book fails to cite the reams of relevant literature that would paint a picture not in the spirit of his deceit, is full of misleading quotes taken out of context, and outright misrepresentation of fact. It brings to mind the tactics of the creationists. Therefore, you have to ask yourself who actually has more to gain by the environmental 'controversy'?On one hand you have thousands of

environmental and biological scientists that on average spent six grueling years after their undergraduate education working like a slave for virtually no money, in order to obtain a Ph.D. and very specialized knowledge. After taking a series of temporary postdoc positions for low pay, if they are bright and highly motivated, they will land a job at a university. They generally sacrifice the greater monetary gains of other fields (like medicine) because they are fascinated by how our Planet, and the living things on it, work. Funding is extremely limited in this field of research and the money that the government and NGOs provide are for research purposes, not private use. In other words they receive no personal gain, they all wish the news was better, and they hate

having to take time off from their research to deal with Bozos like Lomborg. Do you actually believe that if their were no environmental problems that there would be nothing to keep scientists occupied? On the other hand we have a statistician, with no expertise on environmental issues and only one (not very prestigious) publication in statistics. He is a junior faculty member not highly regarded by his peers. He writes a book for the lay person, that is basically just an expanded and updated version of similiar books written in the recent past. If that book takes a popular but controversial stand, it might sell millions. The author would be rich and famous. Such an author might have already been considered a failure by academics and therefore would have

nothing to lose by writing a book with no intellectual merit. Such a book would also have the advantage of not having to go through that pesky peer-review process that may have kept some of his other biased and unsubstantiated ideas from seeing the light of day. Think about it.

- Don't get into another conversation about the environment until you read this book! Lomborg explains it all! He uses easy-to-understand graphs and long time periods to show environmental change. We have all heard the big numbers-1,000 species extinct every year, seas will be dead in 10 years, rain forest gone in 20. This book, which should be in every home worldwide, shows how to evaluate the information overload. Whom should you send your

charity to in order to best improve the environment? Lomborg will show you how to judge. Which environmental measures save the most lives for the least money? Lomborg assembles the data. As a former CPA, I became disillusioned when I realized non-profit environmental organizations were just as selfish as any other business. When human self-interest is at stake, objectivity goes out the window. So this book was the answer to a prayer for me. A way to measure where we are on air, water, extinctions, population, disease and global warming. Where will you get the most bang for your buck and volunteer hours? First you have to know how bad things are and what the remedies might be. Make no mistake, this is not easy reading; it is, however,

essential reading for every voter and activist on the planet. READ THIS BOOK!!!!
