REVIEW OF COMPENSATION MILKOVICH 11TH EDITION

- I will keep this review short and to the point. I would like to make my position clear - I believe in the efficacy of the free market system. Why should anyone read this book? Well there is only one answer. To make up your own mind. The controversy surrounding this particular author is not my concern. I am sure that he can fight his own battles. My concern is that if I want to know about what is happening to the environment I want to be able to get the facts from somewhere. I do not trust government statistics, nor do I necessarily trust the information I get from any sort of organisation that has an axe to grind for one side of

the other. To the extent one can trust the scientific community, which is not value free, one should be able to go to published sources and find the information that one seeks. If we do not have the required level of technical expertise we are forced to rely on others to translate accurately the science into English. This book performs an important function for us, as non-scientific members of our community. We owe it to ourselves to read this book and make up our own minds about the information which is made available to us. I am sure that the vast majority of us are concerned about the environment whatever our personal beliefs. We need to make informed decisions based on the best information possible and in my view that means that we should ALL be skeptical. As Bob Dylan so eloquently put it: Don't follow leaders follow parking meters!

- Bjorn Lomborg presents a challenge to environmentalist groups everywhere who exaggerate the problems the world is facing today. He considers each of their propositions and attempts to

put their claims in context with the overall progress of the world. His findings indicate that despite popular belief and the claims of environmentalists, the world today is better off than before. For his pains, the author has been lambasted by left wing groups as being a stooge of capitalists. Yet, his book is well documented, with 3000 notes supporting the many claims that he makes. Perhaps he is expecting this strong reaction, and if so, I commend his courage to take such a strong stand and to raise environmental issues to the front, to be prioritised and evaluated along with other pressing problems that face our societies today. His basic premise is that we need to take an objective evaluation of many of the environmental problems that are thrust into our attention by the media and other groups. The understanding of the Real State of the world will allow us to prioritise our attention most effectively, instead of having the public agenda hijacked by interest groups who proclaim selected statistics in order to further their cause. Recommended reading for anyone concerned about the environment today.
