SCENT AND CHEMISTRY RECAP: UNLOCK YOUR FOLLOWING LITERARY JOURNEY WITH OUR CONCISE REVIEWS

Flavours and
Fragrances Wiley-VCH

This book discusses the technical, artistic and commercial challenges of the perfume industry in an informative and engaging style.

**Fundamentals of
Fragrance Chemistry**

St. Martin's Press

This book has been prepared as an introduction to the chemistry of odorous molecules. While there exist a number of works of an encyclopedic nature which cover this field, there is none which treats the subject in an instructional fashion. To fill this gap, a group of scientists, types from the chemical point of view, to present to the reader the panorama of those molecules that stimulate the sense of smell. To make the picture complete, the chapters that are strictly chemical in content are preceded by several that

introduce the topics of the physiology of the olfactory system, the current hypotheses on the mechanism of the sense of smell, and the structure-odor relationships in odorous molecules. There is also a treatment of analytical techniques which have become important to fragrance chemical research and testing.

This treatise provides a broad overview of the many important aspects involved in the creation of perfumes and a fundamental understanding of the chemical basis of perfumery. The emphasis is on the development of fine fragrances for both students and those seeking a more in-

depth knowledge of perfumery. This book is divided into five chapters: Essential Oils and Odorants, Perfumes - History and Modern Perfumery, Creation of a Perfume, Chemistry of Odorants and the Physiology and Theories of Smell. The first chapter covers the characteristics and isolation of some important essential oils from plant blossoms, leaves, roots & rhizomes, fruits, seeds, wood & bark, and plant exudates (resins). Also included in this chapter is a description of the characteristics of odorants from animal sources. Additional information about the chemical composition of many essential oils is covered in a later chapter on Chemistry of Odorants. The basic structure and

composition of perfumes is given in a separate chapter and more detailed descriptions are given for some of the historically important perfumes. Methods of training for perfumery are reviewed and several approaches for composing new fragrances are described in the chapter on Creation of Perfumes. The increasing use of computer technology and artificial intelligence in perfumery is also described. The chapter on the Chemistry of Odorants clarifies the structural character of the many aroma components utilized in perfumes. It is important to note that many of the chemical constituents derived from plants can be produced synthetically in the laboratory and many of the ingredients in perfumes on the market today are synthetic rather than plant derived. The final chapter covers the Physiology of Smell and the complicated Theory of Smell. The molecular structure and vibrational theories of smell are described and conclusions are reached about the most probable mechanism of smell.

The Book of Perfumes
Harper Collins

The ultimate guide to the smells of the universe - the ambrosial to the malodorous, and everything in between - from the author of the acclaimed culinary guides *On Food and Cooking* and *Keys to*

Good Cooking From Harold McGee, James Beard Award-winning author and leading expert on the science of food and cooking, comes an extensive exploration of the long-overlooked world of smell. In *Nose Dive*, McGee takes us on a sensory adventure, from the sulfurous nascent earth more than four billion years ago, to the fruit-filled Tian Shan mountain range north of the Himalayas, to the keyboard of your laptop, where trace notes of phenol and formaldehyde escape between the keys. We'll sniff the ordinary (wet pavement and cut grass) and the extraordinary (ambergris and truffles), the delightful (roses and vanilla) and the challenging (swamplands and durians). We'll smell one another. We'll smell ourselves. Through it all, McGee familiarizes us with the actual bits of matter that we breathe in—the molecules that trigger our perceptions, that prompt the citrusy smells of coriander and beer and the medicinal smells of daffodils and sea urchins. And like everything in the physical world, molecules have histories. Many of the molecules that we smell every day existed long before any creature was around to smell them—before there was even a planet for those creatures to live on. Beginning with the origins of those molecules in interstellar space, McGee moves onward

through the smells of our planet, the air and the oceans, the forest and the meadows and the city, all the way to the smells of incense, perfume, wine, and food. Here is a story of the world, of every smell under our collective nose. A work of astounding scholarship and originality, *Nose Dive* distills the science behind the smells and translates it, as only McGee can, into an accessible and entertaining guide. Incorporating the latest insights of biology and chemistry, and interweaving them with personal observations, he reveals how our sense of smell has the power to expose invisible, intangible details of our material world and trigger in us feelings

that are the very essence of being alive.

'An authoritative guide from two experts who really know their way around scent' - FUNMI FETTO *The Perfume Companion* is a beautifully illustrated compendium of almost 500 recommended scents, designed to help you pick out your next favourite fragrance. Perfumes have the power to evoke treasured memories, make us feel fabulous and help us express our best self. But with so many out there, how do you choose something new? When the scents in the perfume shop are merging into one aromatic haze, how do you remain focused? And if your favourite

scent goes out of stock, how do you replace it? The Perfume Companion is here to help. Sarah McCartney and Samantha Scriven deliver a host of scents for you to try - including bargain finds and luxury treasures, iconic stalwarts and indie newcomers, the lightest florals and the deepest leathers. With insider information about how perfumes are really made, discover hundreds of new fragrances and find the scents to share your own memories with. This is the perfect companion for your scented adventures.

The Chemistry of Fragrances CRC Press

In recent years, our knowledge of the anatomy and physiology of olfaction has grown enormously,

accompanied by a growing appreciation of scent. This is reflected in the fact that the 2004 Nobel Prize in Medicine was awarded for discoveries of 'Odorant Receptors and the Organization of the Olfactory System'. This book naturally supports such developments, and takes the reader on a fascinating fragrant journey around the world to some of the exciting places the author has visited during his 30 years of olfactory research. Following an introductory section to the world of natural scents, including their biological meaning and history, the fragrance and flavor chemist, Roman Kaiser, who is renowned for his 'headspace' analytical technique, revisits

some memorable scents. In doing so, he leads us to such exotic places as Lower Amazonia, Papua New Guinea, India, and many rain-forest biotopes in his quest for new molecules and new scent concepts, showing us along the way how a scent like tatami can be linked to culture. The third and final section describes the analysis of the compositions of the presented scents.

UNDERSTANDING PERSONALITIES IN SCENT AND CHEMISTRY

The Emperor of Scent
Wiley-VCH

This book is an introduction to the world of aroma chemicals, essential oils, fragrances and flavour compositions for the food, cosmetics and pharmaceutical industry. Present technology, the future use of resources and biotechnological approaches for the production of the respective chemical compounds are described. The book has an integrated and interdisciplinary approach on future industrial production and the issues related to this topic.

A Field Guide to the
World's Smells
Doubleday Canada

A pioneering exploration of olfaction that upsets settled notions of how the brain translates sensory information.

Decades of cognition research have shown that external stimuli “spark” neural patterns in particular regions of the brain. This has fostered a view of the brain as a space that we can map: here the brain responds to faces, there it perceives a sensation in your left hand. But it turns out that the sense of smell—only recently attracting broader attention in neuroscience—doesn’t work this way. A. S. Barwich asks a deceptively simple question: What does the nose tell the brain, and how does the brain understand it? Barwich interviews experts in neuroscience, psychology, chemistry, and perfumery in an effort to understand the biological mechanics and myriad

meanings of odors. She argues that it is time to stop recycling ideas based on the paradigm of vision for the olfactory system. Scents are often fickle and boundless in comparison with visual images, and they do not line up with well-defined neural regions. Although olfaction remains a puzzle, Barwich proposes that what we know suggests the brain acts not only like a map but also as a measuring device, one that senses and processes simple and complex odors. Accounting for the sense of smell upsets theories of perception philosophers have developed. In their place, Smellosophy articulates a new model for understanding how the brain represents

sensory information.

To women the whole world over, perfume means glamour, and in the world of perfume, Jean-Claude Ellena is a superstar. In this one-of-a-kind book, the master himself takes you through the doors of his laboratory and explains the process of creating precious fragrances, revealing the key methods and recipes involved in this mysterious alchemy. Perfume is a cutthroat, secretive multibillion-dollar industry, and Ellena provides an insider's tour, guiding us from initial inspiration through the mixing of essences and synthetic elements, to the deluxe packaging and marketing in

elegant boutiques worldwide, and even the increasingly complicated safety standards that are set in motion for each bottle of perfume that is manufactured. He explains how the sense of smell works, using a palette of fragrant materials, and how he personally chooses and composes a perfume. He also reveals his unique way of creating a fragrance by playing with our olfactory memories in order to make the perfume seductive and desired by men and women the world over. Perfume illuminates the world of scent and manufactured desire by a perfumer who has had clients the likes of Cartier, Van Cleef & Arpels, Bulgari, and Hermés.

The Alchemy of Scent

Random House

As with nearly all living creatures, humans have always been attracted and intrigued by floral scents. Yet, while we have been manufacturing perfumes for at least 5000 years to serve a myriad of religious, sexual, and medicinal purposes, until very recently, the limitation of our olfactory faculty has greatly hindered our capacity to clearly and ob

Read The Case Against Fragrance and you will never think about fragrance in the same way again. If you have been suffering fragrance in silence, you will know you are not alone.' Conversation Kate Grenville had always

associated perfume with elegance and beauty. Then the headaches started. Like perhaps a quarter of the population, Grenville reacts badly to the artificial fragrances around us: other people's perfumes, and all those scented cosmetics, cleaning products and air fresheners. On a book tour in 2015, dogged by ill health, she started wondering: what's in fragrance? Who tests it for safety? What does it do to people? The more Grenville investigated, the more she felt this was a story that should be told. The chemicals in fragrance can be linked not only to short-term problems like headaches and asthma, but to long-term ones like hormone disruption

and cancer. Yet products can be released onto the market without testing. They're regulated only by the same people who make and sell them. And the ingredients don't even have to be named on the label. This book is based on careful research into the science of scent and the power of the fragrance industry. But, as you'd expect from an acclaimed novelist, it's also accessible and personal. The Case Against Fragrance will make you see—and smell—the world differently. When I was little, my mother had a tiny, precious bottle of perfume on her dressing-table and on special occasions she'd put a dab behind her ears. The smell of Arpege was always linked in my mind with excitement and pleasure—Mum with her hair done, wearing her best dress and her pearls, off for a night out with Dad. When I got old enough to have my own special occasions I also had my favourite perfume. I loved the bottles: those sensuous shapes. I loved the names and the labels, so evocative of all things glamorous. Kate Grenville is one of Australia's most celebrated writers. Her bestselling novel *The Secret River* received the Commonwealth Writers' Prize, and was shortlisted for the Man Booker Prize and the Miles Franklin Literary Award. *The Idea of Perfection* won the Orange Prize. Grenville's other novels include *Sarah Thornhill*,

The Lieutenant, Lilian's Story, Dark Places and Joan Makes History. Kate lives in Sydney and her most recent works are the non-fiction books One Life: My Mother's Story and The Case Against Fragrance. 'One spritz of aftershave or perfume can leave other people retching and clutching their heads—you never see that in the ads.' Kaz Cooke 'Beginning with her own physical reaction to fragrance that begins with a headache a lot of us know ourselves, she investigates the fragrance industry and its side-effects and interweaves these facts with the personal to create an accessible work of non-fiction.' ArtsHub 'Fact-dense and extensively referenced, the book is a delight to read and never gets bogged down...While some of the science has been simplified, the book generally conveys the sense of it correctly...Well developed and thoughtful. Read The Case Against Fragrance and you will never think about fragrance in the same way again. If you have been suffering fragrance in silence, you will know you are not alone.' Conversation 'Grenville sets out to unlock the dark science—the volatile compounds, conspiracies and carcinogens—hiding in perfume, the ingredients of which are regularly listed as alcohol, water and the mysterious catch-all "fragrance".' New Statesman 'In this

appealingly written exploration, Kate uncovers the dark side of the fragrance industry, from the carcinogens in after-shave to the hormone disruptors in perfume that mimic oestrogen.' Child 'An insightful and frightening book.' Readings 'Readable, interesting and informative.' Big Book Club 'Grenville expresses hope though that our society will find solutions to the fragrant violation of personal space based on courtesy and civility rather than on regulation and policy.' Australian Book Review 'You may be familiar with Australian novelist Kate Grenville's work but she enters new territory here. After exposure to perfumes and scents delivered ill-health her way, Grenville got curious as to why...The result is a fascinating (and worrying) exposé of the potentially damaging health effects of fragrances and the laxity of their regulation. Grenville digs into the science of scent as well as the intrigue of a multi-billion-dollar industry and makes it beautifully accessible in the process.' WellBeing 'The Orange Prize-winning novelist's discovery that she reacts badly to the artificial fragrances all around us led her to investigate what is in fragrances, what it does to people and whether it is properly tested for safety...The result is this accessible and personal book on the science of fragrance' Bookseller '[Grenville] raises

valuable questions about the potentially harmful chemicals surrounding us every day and why we so unabashedly live in ignorance of them.’ Reader’s Digest UK, Best New Books to Read This Summer ‘In some places, though, the danger [of fragrance] is beginning to be taken as seriously as passive smoking 30 years ago...it sounds silly, until you read Kate Grenville’s explosive exposé and wonder why no one ever told you this stuff before.’ Mail on Sunday ‘An accessible, intelligent, seriously researched—and terrifying—book’ Daily Mail UK

The Joy of Sweat: The Strange Science of Perspiration Elsevier

For as long as anyone

can remember, a man named Luca Turin has had an uncanny relationship with smells. He has been compared to the hero of Patrick Süskind’s novel *Perfume*, but his story is in fact stranger, because it is true. It concerns how he made use of his powerful gifts to solve one of the last great mysteries of the human body: how our noses work. Luca Turin can distinguish the components of just about any smell, from the world’s most refined perfumes to the air in a subway car on the Paris metro. A distinguished scientist, he once worked in an unrelated field, though he made a hobby of collecting fragrances. But when, as a lark, he published a collection of his reviews of the

world's perfumes, the book hit the small, insular business of perfume makers like a thunderclap. Who is this man Luca Turin, they demanded, and how does he know so much? The closed community of scent creation opened up to Luca Turin, and he discovered a fact that astonished him: no one in this world knew how smell worked. Billions and billions of dollars were spent creating scents in a manner amounting to glorified trial and error. The solution to the mystery of every other human sense has led to the Nobel Prize, if not vast riches. Why, Luca Turin thought, should smell be any different? So he gave his life to this great puzzle. And in the end, incredibly, it would seem that he

solved it. But when enormously powerful interests are threatened and great reputations are at stake, Luca Turin learned, nothing is quite what it seems. Acclaimed writer Chandler Burr has spent four years chronicling Luca Turin's quest to unravel the mystery of how our sense of smell works. What has emerged is an enthralling, magical book that changes the way we think about that area between our mouth and our eyes, and its profound, secret hold on our lives.

An artisan perfumer reveals a lost art and its mysterious, sensual history. For centuries, people have taken what seems to be an instinctive pleasure in rubbing scents into their skin. Perfume has

helped them to pray, to heal, and to make love. And as long as there has been perfume, there have been perfumers, or rather the priests, shamans, and apothecaries who were their predecessors. Yet, in many ways, perfumery is a lost art, its creative and sensual possibilities eclipsed by the synthetic ingredients of which contemporary perfumes are composed, which have none of the subtlety and complexity of essences derived from natural substances, nor their lush histories. *Essence and Alchemy* resurrects the social and metaphysical legacy that is entwined with the evolution of perfumery, from the dramas of the spice trade to the quests of the alchemists to whom today's perfumers owe a philosophical as well as a practical debt. Mandy Aftel tracks scent through the boudoir and the bath and into the sanctums of worship, offering insights on the relationship of scent to sex, solitude, and the soul. Along the way, she imparts instruction in the art of perfume compositions, complete with recipes, guiding the reader in a process of transformation of materials that continues to follow the alchemical dictum *solve et coagula* (dissolve and combine) and is itself aesthetically and spiritually transforming.

The olfactory journey described in this book introduces readers to the pleasures and benefits of educating and training the 'nose', our olfactory palate. Jennifer Peace Rhind explores the process of cultivating our sense of smell and demonstrates how the process itself can be therapeutic and enjoyable, as well as informative. She highlights the different skills involved, from olfactory vocabulary, awareness, and memory, through to discrimination and fragrance creation, and the activities that can help to acquire them, emphasizing the value of experiential learning. She describes the Japanese art of

koh-do or the 'way of incense' and suggests ways of creating group events inspired by this. Based on her twenty five years' experience working with essential oils and aromatic plant extracts, she also leads the reader through a variety of scent families, with information on the botanical source, odour profiles, olfactory notes, and suggestions for comparison with other scents. This method of educating and training the 'nose' is fascinating, challenging and life-enhancing and will be of interest to anyone eager to develop their sense of smell, and of incalculable use to aromatherapy students and practitioners who must acquire these skills for their career.

Odor impressions have cast a spell over mankind since the dim and distant past. But even today, we are -consciously or subconsciously- guided by our sense of smell and the chemistry behind it. The prominent fragrance chemists Günther Ohloff , Wilhelm Pickenhagen and Philip Kraft convey the scientist, the perfumer, and the interested layman with a vivid and up-to-date picture of the chemistry of odorants and the research in odor perception. In this second thoroughly revised and updated edition they are joined by creative perfumer Fanny Grau, a rising master in this métier, who complements the

scientific treatise by a concise introduction to the art of perfumery and its composition techniques. Besides this new chapter on the creative aspects of perfumery, the book details on the molecular basis of olfaction, olfactory characterization of perfumery materials, structure-odor relationships, the chemical synthesis of odorants, and the chemistry of essential oils and odorants from the animal kingdom, backed up by many perfume examples and historical aspects. It will serve as a thorough introductory text for everyone interested in the molecular world of odors.

A New York Times Most Anticipated Book of the Summer A taboo-busting romp through the shame, stink, and strange science of sweating. Sweating may be one of our weirdest biological functions, but it's also one of our most vital and least understood. In *The Joy of Sweat*, Sarah Everts delves into its role in the body—and in human history. Why is sweat salty? Why do we sweat when stressed? Why do some people produce colorful sweat? And should you worry about Big Brother tracking the hundreds of molecules that leak out in your sweat—not just the stinky ones or alleged pheromones—but the ones that reveal secrets about your health and vices? Everts's entertaining investigation takes readers around the world—from Moscow, where she participates in a dating event in which people sniff sweat in search of love, to New Jersey, where companies hire trained armpit sniffers to assess the efficacy of their anti-sweat products. In Finland, Everts explores the delights of the legendary smoke sauna and the purported health benefits of good sweat, while in the Netherlands she slips into the sauna theater scene, replete with costumes, special effects, and towel dancing. Along the way, Everts traces humanity's long quest to control sweat, culminating in the multibillion-dollar

industry for deodorants and antiperspirants. And she shows that while sweating can be annoying, our sophisticated temperature control strategy is one of humanity's most powerful biological traits. Deeply researched and written with great zest, *The Joy of Sweat* is a fresh take on a gross but engrossing fact of human life.

REVIEW OF SCENT AND CHEMISTRY

- One night I dreamed I was walking through the Fallen Woods with Logan. Many scenes from my life flashed across the trees. In each scene I noticed footprints in the dirt. Sometimes there were two sets of footprints, other times there were one set of footprints. This

bothered me because I noticed that during the low periods of my life, when I was suffering from anguish, sorrow or defeat, I could see only one set of footprints. So I said to the Logan, "You promised me Logan, that if I followed you into the Fallen Woods, you would walk with me always. But I have noticed that during the most trying periods of my life there have only been one set of footprints in the dirt. Why, when I needed you most, you have not been there for me?" Logan replied, "The times when you have seen only one set of footprints in the dirt, is when I carried you

through the Fallen Woods."

- I'm such a fan of books from Woodbine House! My kids love this series of books about a boy named Russ, especially RUSSE AND THE FIREHOUSE. I think it's wonderful that Russ has Down syndrome and the book doesn't even mention it. It just shows Russ as a regular kid, doing regular kid stuff. Any child who likes fire engines will love this tour of a real firehouse. We have the first book in the series, RUSSE AND THE APPLE TREE SURPRISE, and we hear that there is a new one coming out soon. Looking forward to it!
