"Shiva does not spell religion. Shiva spells responsibility -- our ability to take our very life process in our hands." -- Sadhguru 'Shi-va' is 'that which is not', a primordial emptiness; Shiva is also the first-ever yogi, Adiyogi, the one who first perceived this emptiness. Adiyogi is symbol and myth, historic figure and living presence, creator and destroyer, outlaw and ascetic, cosmic dancer and passionate lover, all at once. A book like no other, this extraordinary document is a tribute to Shiva, the Adiyogi, by a living yogi; a chronicle of the progenitor of mysticism by a contemporary mystic. Here science and philosophy merge seamlessly, so do silence and sound, question and answer--to capture the unspeakable enigma of Adiyogi in a spellbinding wave of words and ideas that will leave one entranced, transformed.

In the Occupational Safety and Health Act of 1970, Congress declared that its purpose was to assure, so far as possible, safe and healthful working conditions for every working man and woman and to preserve our human resources. In this Act, the National Institute for Occupational Safety and Health (NIOSH) is charged with recommending occupational safety and health standards and describing exposure concentrations that are safe for various periods of employment-including but not limited to concentrations at which no worker will suffer diminished health, functional capacity, or life expectancy as a result of his or her work experience. By means of criteria documents, NIOSH communicates these recommended standards to regulatory agencies (including the Occupational Safety and Health Administration [OSHA]) and to others in the occupational safety and health community. Criteria documents provide the scientific basis for new occupational safety and health standards. These documents generally contain a critical review of the scientific and technical information available on the prevalence of hazards, the existence of safety and health risks, and the adequacy of control methods. In addition to transmitting these documents to the Department of Labor, NIOSH also distributes them to health professionals in academic institutions, industry, organized labor, public interest groups, and other government agencies. In 1972, NIOSH published Criteria for a Recommended Standard: Occupational Exposure to Noise, which provided the basis for a recommended standard to reduce the risk of developing permanent hearing loss as a result of occupational noise exposure [NIOSH 1972]. NIOSH has now evaluated the latest scientific information and has revised some of its previous recommendations. The 1998 recommendations go beyond

attempting to conserve hearing by focusing on preventing occupational noise-induced hearing loss (NIHL). This criteria document reevaluates and reaffirms the recommended exposure limit (REL) for occupational noise exposure established by the National Institute for Occupational Safety and Health (NIOSH) in 1972. The REL is 85 decibels, A-weighted, as an 8-hr time-weighted average (85 dBA as an 8-hr TWA). Exposures at or above this level are hazardous. By incorporating the 4000-Hz audiometric frequency into the definition of hearing impairment in the risk assessment, NIOSH has found an 8% excess risk of developing occupational noise-induced hearing loss (NIHL) during a 40-year lifetime exposure at the 85-dBA REL. NIOSH has also found that scientific evidence supports the use of a 3-dB exchange rate for the calculation of TWA exposures to noise. The recommendations in this document go beyond attempts to conserve hearing by focusing on prevention of occupational NIHL. For workers whose noise exposures equal or exceed 85 dBA, NIOSH recommends a hearing loss prevention program (HLPP) that includes exposure assessment, engineering and administrative controls, proper use of hearing protectors, audiometric evaluation, education and motivation, recordkeeping, and program audits and evaluations. Audiometric evaluation is an important component of an HLPP. To provide early identification of workers with increasing hearing loss, NIOSH has revised the criterion for significant threshold shift to an increase of 15 dB in the hearing threshold level (HTL) at 500, 1000, 2000, 3000, 4000, or 6000 Hz in either ear, as determined by two consecutive tests. To permit timely intervention and prevent further hearing losses in workers whose HTLs have increased because of occupational noise exposure, NIOSH no longer recommends age correction on individual audiograms.

This book is a non-encyclopedic introductory textbook of industrial hygiene. Based on years of teaching a single-semester course on the topic, it presents a broad survey of the field and addresses the typical student. Introduction to Industrial Hygiene is divided into three sections. The first section focuses on chemical hazards, presenting the basics of toxicology, the problems of skin contact and inhalation, the detection and control of airborne contaminants, and the threat of fire or explosion. The first part also describes government regulations and the agencies that enforce them. The second part of the book discusses injury from physical causes, including sound, radiation, heat, and accidents. This part also contains an introduction to ergonomics. The third part describes a range of industries that are major sources of both employment and potential injury, and it applies the principles outlined in the first two parts. At the end of each chapter, the material covered is summarized in a Key Points section. References are provided both to background material and to sources that expand beyond the scope of the chapter. Problems sets have practical bases and lead students into the CFR to familiarize them with the contents and the manner of locating information in the CFR. Extensive appendices provide practical information and allow the text to continue being a valuable source of reference for the student.

REVIEW OF FREE OSHA 30 HOUR FOR GENERAL INDUSTRY STUDY GUIDE IN PDF FORMAT

- It looked very good on the picture. It is not as what I expected. The sound quality is not good, I can hear from only one ear.
- This was very disappointing. It would have been very useful to see acoherent review of data, without adherence to political ideology --which is what this book bills itself as, but fails to be. Lomborg hascarefully cherrypicked the sources of his information, generallyignoring actual peer-reviewed research data in favor of repackagedmedia clips, in order to give a uniformly rosy view of the world. Hepresents things as clear-cut and simplistic that are uniformly morecomplex (for instance, confusing issues between coal and oil reservesthat *exist*, and those that are *recoverable*; and in his chapter onpopulation, calculating population per total landmass rather thanpopulation per *usable* landmass -- his calculations look much better,but are not realistic when viewed against the fact that the SaharaDesert, the Antarctic, and similar regions are in the main notconducive to supporting a human population). And throughout the bookhe conveniently ignores data that contradicts what he has chosen toquote, something that peer-reviewed scientists are not allowed to getaway with.And that brings us to the further level of deceptioninvolved in this book -- it is, indeed, "peer-reviewed", but thosepeers were chosen from the fields of the social sciences, primarilypsychology. This was not reviewed by a single environmental,biological, climate or even agricultural scientist before publication-- quite possibly because they would have made him go back and rewritethe thing.
