Malik and the Madhhab of Madina Walter de Gruyter GmbH & Co KG

After 9/11, madrasas have been linked to international terrorism. They are suspected to foster anti-western, traditionalist or even fundamentalist views and to train al-Qaeda fighters. This has led to misconceptions on madrasa-education in general and its role in South Asia in particular. Government policies to modernize and 'pacify' madrasas have been precipitous and mostly inadequate. This book discusses the educational system of madrasas in South Asia. It gives a contextual account of different facets of madrasa education from historical, anthropological, theological, political and religious studies perspectives. Some contributions offer recommendations on possible - and necessary - reforms of religious educational institutions. It also explores the roots of militancy and sectarianism in Pakistan, as well as its global context. Overall, the book tries to correct misperceptions on the role of madrasas, by providing a more balanced discussion, which denies neither the shortcomings of religious educational institutions in South Asia nor their important contributions to mass education.

"Part fiction, part overview of 'Aha!' moments in the forward march of physics, *Only the Longest Threads* takes readers dramatically through scientific fields such as quantum field theory, electromagnetism, relativity, quantum mechanics, and string theory. Each idea or concept is explored in an inventive chapter, each told from a different first-person narrator; the faux emails, letters, and diary entries take place from 1728 to the present day."—Boing Boing, "The Best Books for Nerds from 2014" "Science is done by real human beings, with human concerns. *Only the Longest Threads* tells a story that conveys the human side of science in a way that is as moving as it is accurate."—Sean Carroll, theoretical physicist at Caltech and author of *The Particle at the End of the Universe* *Only the Longest Threads* will thrill readers with its dramatic and lucid accounts of the great breakthroughs in the history of physics—classical mechanics, electromagnetism, relativity, quantum mechanics, quantum field theory, and string theory, each from the viewpoint of a (fictional) witness to the events. Tasneem Zehra Husain re-imagines the pivotal moments in the history of physics when radical new theories shifted our perception of the universe, and our place in it. Husain immerses the reader in the immediacy and excitement of the discoveries—and she guides us as we begin to understand the underlying science and to grasp the revolutionary step forward each of these milestones represents. "Tasneem Zehra Husain writes lyrically, poetically about life, love, and physics. I highly recommend this wonderful book for anyone interested in what physics, and indeed all of science, is about. She masterfully describes the most momentous moments in physics history with verve and talent."—Amir D. Aczel, bestselling author of *Fermat's Last Theorem* "A delightful meditation on the development of modern physics, culminating in the discovery of the Higgs. Husain follows the thread of its creation through a dialog between a journalist and young theory student, and as seen through the eyes of witnesses."—John Huth, Donner Professor of Science, Harvard University "Well-written and cleverly constructed, this book takes us on a journey through the history of physics as a series of fictional adventures, loosely linked by another fiction, the storytellers' emails to each other. Some books are praised because 'I couldn't put it down,' but this one merits a deeper reading, one that stops, muses on, and savors each story before going on to the

next. Each one captures not only the emergence of a significant idea in physics, but also something of the characters, culture, and times surrounding that development. So take your time, pause to ponder, but persevere, you will be well rewarded!"—Helen R. Quinn, Physicist, Science Educator, and co-author of *The Mystery of the Missing Antimatter*, Professor Emeritus SLAC National Accelerator Laboratory "How do theoretical physicists think? Tasneem Zehra Husain knows. She knows their purpose, feels their passions, articulates their frustrations, shares their triumphs. Through the device of fiction *Only the Longest Threads* communicates the history of physical thought—its roots in inquisitiveness and essential disinterest in outcome—with greater clarity than any popular science text."—Michael Duff FRS, Abdus Salam Professor of Theoretical Physics, Imperial College London "An artfully constructed journey through space and time."—Freddy Cachazo, Perimeter Institute for Theoretical Physics "Husain skillfully weaves a poetic tapestry."—Joseph Mazur, author of *Enlightening Symbols*

[Community Radio in South Asia](#) Taylor & Francis

The fundamental mathematical tools needed to understand machine learning include linear algebra, analytic geometry, matrix decompositions, vector calculus, optimization, probability and statistics. These topics are traditionally taught in disparate courses, making it hard for data science or computer science students, or professionals, to efficiently learn the mathematics. This self-contained textbook bridges the gap between mathematical and machine learning texts, introducing the mathematical concepts with a minimum of prerequisites. It uses these concepts to derive four central machine learning methods: linear regression, principal component analysis, Gaussian

mixture models and support vector machines. For students and others with a mathematical background, these derivations provide a starting point to machine learning texts. For those learning the mathematics for the first time, the methods help build intuition and practical experience with applying mathematical concepts. Every chapter includes worked examples and exercises to test understanding. Programming tutorials are offered on the book's web site.

This book explores the state of community radio, a significant independent media movement that began about two decades ago, in different parts of South Asia. The volume outlines the socioeconomic and historical contexts for understanding the evolution and functioning of community radio in an increasingly globalised media environment. It provides a ring-side view of how various countries in South Asia have formulated policies that enabled the emergence of this third sector of broadcasting (public and private being the other two) through radio, rendering the media ecology in the region more pluralistic and diverse. The chapters in the volume, interspersed by practitioner perspectives, discuss a range of key issues related to community radio: radio policies, NGOisation of community radio, spectrum management and democratisation of technology, disasters/emergencies, gender issues, sustainability, and conflicts. One of the first of its kind, this volume will appeal to scholars and researchers of community media and independent media studies, cultural studies, as well as sociology and social anthropology, and South Asian studies.
