The Callendar Effect John Wiley & Sons

Guy Stewart Callendar (1898–1964) is noted for identifying, in

1938, the link between the artificial production of carbon dioxide and global warming. Today this is called the "Callendar Effect." He was one of Britain's leading steam and combustion engineers, a specialist in infrared physics, author of the standard reference book on the properties of steam at high temperatures and pressures, and designer of the burners of the notable World War II airfield fog dispersal system, FIDO. He was keenly interested in weather and climate, taking measurements so accurate that they were used to correct the official temperature records of central England and collecting a series of worldwide weather data that showed an unprecedented warming trend in the first four decades of the twentieth century. He formulated a coherent theory of infrared absorption and emission by trace gases, established the nineteenth-century background concentration of carbon dioxide, and suggested that its atmospheric concentration was rising due to human activities, which was causing the climate to warm. Callendar's contributions to climatology led the way in the mid-twentieth-century transition from the traditional practice of gathering descriptive climate statistics to the new and exciting field of climate dynamics. In the first half of the twentieth century, the carbon dioxide theory of climate change had fallen out of favor with climatologists.

At twenty-three, William Simon Baekeland was well on his way to becoming the world's best traveled person. The "billionaire" heir to a great plastics fortune had already visited 163 countries, but his real passion was finding ways to visit the world's most challenging destinations—war-torn cities, disputed territories, and

remote or officially off-limits islands at the margins of the map. He earned rock-star status in the world of extreme travel by finding ingenious ways to bring the world's most widely traveled people to difficult-to-reach and forbidden places. But when his story began to unravel, an eccentric group of hyper-well-traveled country collectors were left wondering how they had allowed their obsession to blind them to the warning signs that William Baekeland wasn't who they thought he was. *Mad Travelers: A Tale of Wanderlust, Greed and the Quest to Reach the Ends of the Earth* delves deep inside the subculture of country collecting, taking readers to danger zones like Mogadishu and geographical oddities like Norway's nearly impossible-to-reach Bouvet Island. Along the way, this raucous tale of adventure and international intrigue illuminates the perils and pleasures of wanderlust while examining a fundamental question: why are some people compelled to travel, while others are content to stay home? *Mad Travelers* is a perceptive and at times hilarious account of how the pursuit of everywhere put the world's greatest travelers at the mercy of a brilliant young con man. Soon to be an HBO documentary.

One of the world's most beloved and bestselling writers takes his ultimate journey -- into the most intriguing and intractable questions that science seeks to answer. In *A Walk in the Woods*, Bill Bryson trekked the Appalachian Trail -- well, most of it. In *In A Sunburned Country*, he confronted some of the most lethal

wildlife Australia has to offer. Now, in his biggest book, he confronts his greatest challenge: to understand -- and, if possible, answer -- the oldest, biggest questions we have posed about the universe and ourselves. Taking as territory everything from the Big Bang to the rise of civilization, Bryson seeks to understand how we got from there being nothing at all to there being us. To that end, he has attached himself to a host of the world's most advanced (and often obsessed) archaeologists, anthropologists, and mathematicians, travelling to their offices, laboratories, and field camps. He has read (or tried to read) their books, pestered them with questions, apprenticed himself to their powerful minds. *A Short History of Nearly Everything* is the record of this quest, and it is a sometimes profound, sometimes funny, and always supremely clear and entertaining adventure in the realms of human knowledge, as only Bill Bryson can render it. Science has never been more involving or entertaining.

you have the past in a glass. You can likely find them all in your own kitchen — beer, wine, spirits, coffee, tea, cola. Line them up on the counter, and there you have it: thousands of years of human history in six drinks. "Time travel, UFOs, mysterious planets, stigmata, rock-throwing poltergeists, huge footprints, bizarre rains of fish and frogs-nearly a century after Charles Fort's *Book of the Damned* was originally published, the strange phenomenon presented in this book remains largely unexplained by modern science. Through painstaking research and a witty, sarcastic style, Fort captures the imagination while exposing the flaws of popular scientific explanations. Virtually all of his material was compiled and documented from reports published in reputable journals, newspapers and periodicals because he was an avid collector. Charles Fort was somewhat of a recluse who spent most of his spare time researching these strange events and collected these reports from publications sent to him from around the globe. This was the first of a series of books he created on unusual and unexplained events and to this day it remains the most popular. If you agree that truth is often stranger than fiction, then this book is for you"--Taken from Good Reads website.

Collecting texts taken from letters, diaries, literature, scientific journals and reports, *Pandæmonium* gathers a beguiling narrative as it traces the development of the machine age in Britain. Covering the years between 1660 and 1886, it offers a rich tapestry of human experience, from eyewitness reports of the Luddite Riots and the Peterloo Massacre to more intimate

accounts of child labour, Utopian communities, the desecration of the natural world, ground-breaking scientific experiments, and the coming of the railways. Humphrey Jennings, co-founder of the Mass Observation movement of the 1930s and acclaimed documentary film-maker, assembled an enthralling narrative of this key period in Britain's national consciousness. The result is a highly original artistic achievement in its own right. Thanks to the efforts of his daughter, Marie-Louise Jennings, *Pandæmonium* was originally published in 1985, and in 2012 it was the inspiration behind Danny Boyle's electrifying Opening Ceremony for the London Olympic Games. Frank Cottrell Boyce, who wrote the scenario for the ceremony, contributes a revealing new foreword for this edition.
