- I heard about this book from co-worker , My husband just loves to read this type of book. I got it for His Birthday and he couldn't put it down. He is still talking about it
- In describing the inhabitants of North and South America,

Charles Mann uses the term "Indian," because, he claims, it is what they call themselves. So then, I will do as the Indians do and avoid the term "Native American."The main thesis of this book is that the population of the Indians was much larger and their societies much more sophisticated than previously believed. According to Mann, more than 100 million people lived in the Western Hemisphere in 1491. He also estimates that two-thirds of the continental United States was being farmed at the time. In Mexico, the Indians cultivated corn, tomatoes, beans, and a host of other crops. In addition, their math and writing systems rivalled those of

Sumaria and Ancient Egypt. Mann goes even further and speculates that the Indian social and political traditions in the New England area were influential in the establishment of the American republic. The evidence to support these claims comes from a growing body of archaeological, anthropological and historical research that suggests that when the first European explorers arrived the Western Hemisphere was anything but virgin wilderness. In 1539, when Hernando De Soto took a four-year trek through the American South from what is now Florida to Texas, he wrote that the area was thick with Indians ; Giovanni da Verrazzano, another explorer, wrote that the American seaboard was densely populated with Indian villages; Bartolome de las Casas encountered many townships along the southern route; and South American explorer Gaspar de Carvajal noted many Indian townships up and down the Amazon. However, when the European settlers arrived 150 to 200 hundreded years later they found that these areas were virtually empty. Reasoning along the same lines as Jared Diamond in "Guns, Germs, and Steel," Mann claims that not only did Pizarro and his men defeat the Incas, as did Cortes the Aztecs, with guns and horses, they also brought with them deadly diseases. As Diamond pointed out, the Europeans had

built up immunities to many common diseases from living in close quarters with domesticated animals over the course of centuries. When De Soto explored the American South he brought with him swine and cattle that carried with them smallpox and other viruses. As he traded with the Indians along the way he unwittingly sowed the seeds of their destruction. Mann is an excellent writer and his research has been extensive, but he seems to have nothing but praise for his conjectured civilizations of the New World and nothing but scorn for the achievements of the Europeans. For example, he writes that when Cortes and his men reached Tenochtitlan (Mexico City), they were dazzled by a city bigger and more splendid than Paris. Perhaps. Or when he claims that the Indians bathed regularly and that the Europeans where merely soiled stragglers (my characterization). More daringly, Mann goes further to say that the Indians were more environmentally conscious and that their social and political system was more advanced. It seems that the inhabitants of the New World could do no wrong, they only had the misfortune of being decimated by European diseases. Based on the evidence that Mann uses there is much room for debate. He has written a very

engaging and Indians were as  
provocative scientific advanced and  
travelogue, yet it is sophisticated as he  
hard to believe the portrays them.
