John Wiley & Sons

The updated edition of the classic, fundamental book on weed science *Weed Science* provides a detailed examination of the principles of integrated weed management with important detail on how chemical herbicides work and should be used. This revised Fourth Edition addresses recent developments affecting weed science. These include the increased

use of conservation-tillage systems, environmental concerns about the runoff of agrochemicals, soil conservation, crop biotechnology, resistance of weeds and crops to herbicides, weed control in non agricultural settings and concerns regarding invasive plants, wetland restoration, and the need for a vastly improved understanding of weed ecology. Current management practices are covered along with guidance for selecting herbicides and using them effectively. To serve as a more efficient reference, herbicides are cross-listed by chemical and brand name and grouped by mechanism of action

and physiological effect rather than chemical structure. In addition, an introduction to organic chemistry has been added to familiarize readers with organic herbicides. Also included are guidelines on weed-control practices for specific crops or situations, such as small grains, row crops, horticultural crops, lawns and turf, range land, brush, and aquatic plant life. Generously supplemented with 300 drawings, photographs, and tables, *Weed Science* is an essential book for students taking an introductory course in weed science, as well as a reference for agricultural advisors, county agents, extension specialists, and professionals

throughout the agrochemical industry.

## **REVIEW OF HORTICULTURE PRINCIPLES AND PRACTICES 4TH EDITION**

- After being so disgusted with crochet magazines and pattern books that cater only to the novice crocheter, this book is quite refreshing (not a freakin' doily in sight!). The patterns are wearable and trendy. I love the accessories such as the clutch bags

(pg. 137), the fat-bottom bag (pg. 155) and the 'ruffled corset belt' (pg. 231). I also like the 'Cupcake' top (pg. 165), maybe in not such a pastel-like color; short 'n sweet shrug (pg. 169); I love, love, love the 'prepster' jacket (pg. 191), it'll look great with a pair of dark wash jeans. My son has already gone wild of the 'jolly roger' sweater (pg. 199); and my first project from this book will most likely be the 'unseamly sweater' (pg. 203), which is my favorite project. Oh, I must mention the 'froufrou' sweater (pg. 211); the 'baroque' jacket (pg. 217). I'll be displaying projects from this book on my blog: <http://boundbymyhook.blogspot.com>. This book is worth every dime!

- I guess I'm old

fashioned when it comes to using a telescope, but I prefer a paper atlas to laptops and software star atlases. And I also prefer star-hopping to using GOTO or setting circles. If you're like me, you already know you're buying this massive work. Yes it's expensive. Yes it weighs about twenty pounds. But it's the ultimate paper atlas for the star-hopper. The three volumes (each covering eight hours of RA) together have over one million stars plotted on their pages! The binding and paper are of superb quality, sufficient for this atlas to actually be used out in the field! Unfortunately, after you see how pretty it is (and remember how much it cost), you'll probably be content to

let it sit safely on the shelf to be used as a reference. Personally, I use an 8" Dob and hence generally observe objects bright enough for Tirion's Sky Atlas 2000.0 to be an adequate atlas. I have taken the MSA out a couple times but it was overkill. For owners of larger scopes who wish to go after the fainter DSOs, a Mag 11 atlas like the MSA is a bare minimum. A computer atlas going down to Mag 13 or so would be even better, but if you like paper then the MSA is the way to go. I

eventually do plan to make heavy use of the MSA out in the field, but probably not until I get a larger scope. The closest competition to the MSA is Tirion's Uranometria 2000.0 2nd Edition. Note that although it doesn't plot anywhere near the number of stars the MSA does, Uranometria plots three times the number of deep sky objects (30,000). Therefore, owners of very large telescopes may be better served with Uranometria since it plots the very faint DSOs that MSA skips.
