Urban Politics Routledge

According to some estimates, humanity has now passed the point at which city dwellers outnumber country dwellers. This simple fact encapsulates a multitude of historical trends and contentions, not the least being "is this sustainable"? *Energy, Cities and Sustainability* aims to illuminate this question by tracing the evolution of the modern city, the energy sources that power it and the motivations behind increasing urbanisation. The book examines changing energy use across history, analysing the origins and significance of the Industrial Revolution to reveal how the modern city came into being. Transport, population size, housing, electricity use and growing consumption are each discussed,

showing how the cultural aspects of energy use have influenced urban form in the developed world and developing countries. Finally, in contemplating the future, it is considered whether this model of modern urban life is sustainable. This book is a valuable resource for researchers, academics and policy-makers in the areas of planning, energy policy and environment and sustainability.

Federal Role in Urban Affairs Springer

Global populations have grown rapidly in recent decades, leading to ever increasing demands for shelter, resources, energy and utilities. Coupled with the worldwide need to achieve lower impact buildings and conservation of resources, the need to achieve sustainability in urban environments has

never been more acute. This book critically reviews the fundamental issues and applied science, engineering and technology that will enable all cities to achieve a greater level of metropolitan sustainability, and assist nations in meeting the needs of their growing urban populations. Part one introduces key issues related to metropolitan sustainability, including the use of both urban metabolism and benefit cost analysis. Part two focuses on urban land use and the environmental impact of the built environment. The urban heat island effect, redevelopment of brownfield sites and urban agriculture are discussed in depth, before part three goes on to explore urban air pollution and emissions control. Urban water resources, reuse and management are explored in part

four, followed by a study of urban energy supply and management in part five. Solar, wind and bioenergy, the role of waste-to-energy systems in the urban infrastructure, and smart energy for cities are investigated. Finally, part six considers sustainable urban development, transport and planning. With its distinguished editor and international team of expert contributors, *Metropolitan sustainability* is an essential resource for low-impact building engineers, sustainability consultants and architects, town and city planners, local/municipal authorities, and national and non-governmental bodies, and provides a thorough overview for academics of all levels in this field. Critically reviews the fundamental issues and applied science, engineering and

technology that will enable all cities to achieve a greater level of metropolitan sustainability. Will assist nations in meeting the needs of their growing urban populations. Chapters discuss urban land use, the environmental impact of the built environment, the urban heat island effect, urban air pollution and emissions control, among other topics.

These widely applicable insights from Baltimore contribute to our understanding the ecology of other cities, provide a comparison for the global process of urbanization, and

inform establishment of urban ecological research elsewhere. Comprehensive, interdisciplinary, and highly original, it gives voice to the wide array of specialists who have contributed to this living urban laboratory.

Co-Production For Sustainability The Very Hungry City Urban Energy Efficiency and the Economic Fate of Cities

'A visionary look at how quality food should replace money as the new world currency' Tim Spector 'Hugely ambitious and beautifully written...destined to become a modern classic' Bee Wilson How we search for, make and consume food has defined human history. It transforms our bodies and homes, our politics and our trade, our landscapes and our climate. But by forgetting our culinary heritage and relying on cheap,

intensively produced food, we have drifted into a way of life that threatens our planet and ourselves. What if there were a more sustainable way to eat and live? Drawing on many disciplines, as well as stories of the farmers, designers and economists who are remaking our relationship with food, this inspiring and deeply thoughtful book gives us a provocative and exhilarating vision for change, and points the way to a better future. Happy City: Transforming Our Lives Through Urban Design Macmillan

The facts of Africa's rapid urbanisation are startling. By 2030 African cities will

have grown by more than 350 million people and over half the continent's population will be urban. Yet in the minds of policy makers, scholars and much of the general public, Africa remains a quintessentially rural place. This lack of awareness and robust analysis means it is difficult to make a policy case for a more overtly urban agenda. As a result, there is across the continent insufficient urgency directed to responding to the challenges and opportunities associated with the world's last major wave of urbanisation. Drawing on the expertise of scholars and practitioners associated with the African Centre for Cities, and utilising a diverse array of case studies, Africa's Urban Revolution provides a comprehensive insight into the key issues -

demographic, cultural, political, technical, environmental and economic - surrounding African urbanisation.

Urban Agriculture for Growing City Regions Routledge

Over half of the world's population now lives in urban areas. Few who live in cities understand that cities, too, are ecosystems, as beholden to the laws and principles of ecology as are natural ecosystems. Understanding Urban Ecology: An Interdisciplinary Systems Approach introduces students at the college undergraduate level, or those in advanced-standing college credit high school courses, to cities as ecosystems. For graduate students it provides an overview and rich literature base. Urban planners, educators, and decision makers can use this book to help in

designing a more sustainable or "green" future. The authors use a systems approach to explore the complexity and interactions of different components of a city's ecology with an emphasis on the energy and materials required to maintain such concentrated centers of human activity and consumption. The book is written by seventeen specialized contributors and includes ten accompanying detailed field exercises to promote hands-on experience, observation, and quantification of urban ecosystem structure and function. The chapters describe one by one the different subsystems of the urban environment, their individual components and functions, and the interactions among them that create the social-ecological environments in which

we live. The book's emphasis on social-ecological metabolism provides students with the knowledge and methods needed to evaluate proposed policies for urban sustainability in terms of ecosystem capacity, potential positive and negative feedbacks, the laws of thermo-dynamics, and socio-cultural perception and adaptability.

Urban Food Systems Governance and Poverty in African Cities - (Open Access) Routledge

This volume offers a new perspective to debates on local food and urban sustainability presenting the long silenced voices of the small-scale farmers from the productive green fringe of Sydney's sprawling urban jungle. Providing fresh food for the city and local employment, these culturally and linguistically diverse farmers contribute not only to Sydney's globalizing demographic and cultural fabric, but also play a critical role in the city's environmental sustainability. In the battle for urban space housing development threatens to turn these

farmlands into sprawling suburbia. In thinking from and with the urban 'fringe', this book moves beyond the housing versus farming debate to present a vision for urban growth that is dynamic and alive to the needs of the 21st century city. In a unique bringing together of the twin forces shaping contemporary urbanism - environmental change and global population flows - the voices from the fringe demand to be heard in the debate on future urban food sustainability.

In cities throughout the world, bicycles have gained a high profile in recent years, with politicians and activists promoting initiatives like bike lanes, bikeways, bike share programs, and

other social programs to get more people on bicycles. Bicycles in the city are, some would say, the wave of the future for car-choked, financially-strapped, obese, and sustainability-sensitive urban areas. This book explores how and why people are reconsidering the bicycle, no longer thinking of it simply as a toy or exercise machine, but as a potential solution to a number of contemporary problems. It focuses in particular on what reconsidering the bicycle might mean for everyday practices and politics of urban mobility, a concept that refers to the intertwined physical, technological, social, and experiential dimensions of human movement. This book is for Introductory Anthropology, Cultural Anthropology, Cultural Sociology,

Environmental Anthropology, and all undergraduate courses on the environment and on sustainability throughout the social sciences.

The Emerging Asian City MIT Press

As Africa urbanises and the focus of poverty shifts to urban centres, there is an imperative to address poverty in African cities. This is particularly the case in smaller cities, which are often the most rapidly urbanising, but the least able to cope with this growth. This

book argues that an examination of the food system and food security provides a valuable lens to interrogate urban poverty. Chapters examine the linkages between poverty, urban food systems and local governance with a focus on case studies from three smaller or secondary cities in Africa: Kisumu (Kenya), Kitwe (Zambia) and Epworth (Zimbabwe). The book makes a wider contribution to debates on urban studies and urban governance in Africa through analysis of the causes and consequences of the paucity of urban-scale data for decision makers, and by presenting potential methodological innovations to address this paucity. As the global development agenda is increasingly focusing on urban issues, most notably the urban goal of the new Sustainable

Development Goals and the New Urban Agenda, the work is timely.

Understanding and Improving the Urban Environment Routledge

What is the future of food in light of growing threats from the climate emergency and natural resource depletion, as well as economic and social inequality? This textbook engages with this question, and considers the complex relationships between food, place, and space, providing students with an introduction to the contemporary and future geographies of food and the powerful role that food plays in our everyday lives. Geographies of Food explores contemporary food issues and crises in all their dimensions, as well as the many solutions currently being proposed. Drawing on global case

studies from the Majority and Minority Worlds, it analyses the complex relationships operating between people and processes at a range of geographical scales, from the shopping decisions of consumers in a British or US supermarket, to food insecurity in Sub-Saharan Africa, to the high-level political negotiations at the World Trade Organization and the strategies of giant American and European agri-businesses whose activities span several continents. With over 60 color images and a range of lively pedagogical features, Geographies of Food is essential reading for undergraduates studying food and geography.

An Unexpected Approach to Saving Our World Columbia University Press

As people increasingly migrate to urban

settings and more than half of the world's population now lives in cities, it is vital to plan and provide for sustainable and resilient food systems which reflect this challenge. This volume presents experience and evidence-based "state of the art" chapters on the key dimensions of urban food challenges and types of intra- and peri-urban agriculture. The book provides urban planners, local policy makers and urban development practitioners with an overview of crucial aspects of urban food systems based on an up to date review of research results and practical experiences in both developed and developing countries. By doing so, the international team of authors provides a balanced textbook for students of the growing number of courses on

sustainable agriculture, food and urban studies, as well as a solid basis for well-informed policy making, planning and implementation regarding the development of sustainable, resilient and just urban food systems.

Urban Dependency investigates the risks of urban populations that cannot survive without the massive consumption of basic rural products like food, textiles, fossil fuels, and other energy-rich goods that are harvested by a shrinking rural base. Thomas and Fulkerson argue that though essential, rural workers and communities are poorly compensated for their labor that is both dangerous and highly exploitative. While the rural population is already shrinking, the

authors predict that harsh political-economic conditions will only fuel further rural-urban migration, worsening the problem of urban dependency. The authors apply their theory of the energy economy to explore a balance between the supply and demand of energy resources that promotes rural justice.

Hearings Before the United States Senate Committee on Government Operations, Subcommittee on Executive Reorganization Univ of California Press

This book demonstrates how agriculture can play a determining role in integrated, climate-optimised urban development. Agriculture within urban growth centres today is more than an economic or social left-over or a niche practice. It is instead a complex system

that offers multiple potentials for interaction with the urban system. Urban open space and agriculture can be linked to a productive green infrastructure – this forms new urban-rural linkages in the urbanizing region and helps shape the city. But in order to do this, agriculture has to be seen as an integral part of the urban fabric and it has to be put on the local agenda. Urban Agriculture for Growing City Regions takes the example of Casablanca, one of the fastest growing cities in North Africa, to investigate this approach. The creation of synergies between the urban and rural in an emerging megacity is demonstrated through pilot projects, design solutions, and multifunctional modules. These synergies assure greater resource efficiency; particularly

regarding the use and reuse of water, and they strengthen regional food security and the social integration of multiple spheres. A transdisciplinary research approach brings together different scientific disciplines and local actors into a process of integrated knowledge production. The book will have a long lasting legacy and is essential reading for researchers, planners, practitioners and policy makers who are working on urban development and urban agricultural strategies.

REVIEW OF THE VERY HUNGRY CITY URBAN ENERGY EFFICIENCY AND THE ECONOMIC FATE OF CITIES

- It took me three years to actually read this book, having stopped a few times. I think it's a great book and I would have

given it five stars if it did not require such a commitment to read it. If you don't mind working, it's required reading. It's a unique book in that no book like this will ever be published again. I suppose that uniqueness (of form, style) is what makes it a great book, but it isn't "entertaining." It hits you somewhere else.
