## REVIEW OF THE CARTOON GUIDE TO CHEMISTRY

- Dune is an all respects a truly great piece of work. The synopsis of Dune is fairly simple. A family takes over the mining operations on a highly sought after resource (spice) on a distant planet. However, treachery awaits and a young boy and his boy find themselves as outcasts with desert nomad people the Fremmen. It's a good story. However, what makes the book great is the depth of the writing. Herbert, took a chance with his writing style of weaving his personal philosophy into the story and risked alienating the casual reader. But he had the talent to pull it off. And what a pay off. A fantastic novel. And what I like best about it, is that it has great re-readability. Everytime you read it, you get something you didn't before. By now, I'm read the story 5 times. And I know it inside and out. But every time I finish reading a book, I'll drawn back to it.

- Different from Dune, but equally amazing. This book describes Paul Atreides' tragedy of being able to see the future while being unable to prevent its actualization. But what makes it great is how Paul is destroyed by his own conscience and the weapon of Duncan Idaho, who destroys him by doing nothing but existing. Incomparably great sequel to a great book.
