REVIEW OF ESSENTIAL MATHEMATICS FOR ECONOMICS AND BUSINESS TERESA BRADLEY PDF

- Although the product description includes a long section called "From the Back Cover" which explains in excruciating detail why the Bevington is the best edition, it turns out this text has nothing to do with this item and is not the back cover text. This is not the Bevington edition, and the much praised notes and numbering system are not used in this item. This description should be modified, as it is extremely misleading!
- I thought I had heard most of the possible things that could go wrong as concerns computer useage, privacy, ethics and bioethics. This book by Child brought to the fore a new and disturbing idea. Many people are using the Internet and computers as a way to make their lives better. In this case, singles use a company to find the person who is most likely to be a compatible companion for their lifetime. I know it is a frustrating world for young people to date in, and many don't

want to waste time going to places like bars or even churches trying to find someone they can spend a lifetime with. So they turn to modern technology to provide the answer, just as many people are turning to technology to be able to have children. Unfortunately, even though many places are issuing privacy notices to people to assure them that the companies will keep very vital information secret, there are often ways to get around those promises of privacy. Child's imagination is a little scarier than most people's, from books of his I've read before. In this case, perfect couples are finding one another...but someone or something is killing them and leaving very little information as 'clues' as to whom it might be. Using the concept of artificial intelligence to spin possibilities, Child introduces the reader into a new world, where we may be creating our own problems. Not only are computers not 'hack-proof' so others with motives that are not nice can invade our homes and our places of business, but we also have to deal with the possible repercussions of computers attaining a level of awareness, without having the conscience to go with it. Many people may say that something like this scenario of someone using computer information against the very people it is trying to serve as being far-fetched. I'd like to remind people that when Jules Verne wrote his sci-fi masterpieces, people also read his books and said those machines in his imaginations would never happen, but many of them are not only possible, but are in use now. Books like Child's make me a little uneasy, for fear it will give people 'ideas' that they normally would not have come up with by themselves. I guess we should count ourselves lucky that Child only writes these plots (rather than put them into action!) :-)
