REVIEW OF IPTABLES DOCUMENTATION

• I read this book and couldn't help thinking that I was just "hearing" an account of someone's life. I felt as if I was missing something which I was. And it came out in the last sentence of this amazing and I don't know how she does it book by Joyce Carol Oates. Between "Them", "Do With Me What You Will". "You Must Remember This", and Short Stories written by this woman, I don't know how she knows, how can she get into "our" lives, "our" minds, "our" thoughts, and write so knowingly and correctly about life with such feeling and understanding, I'll never comprehend, just wish if only I had the insight and ability she has. A friend years ago said this book was written as if about my personal family and knowledge she had about our life, but this book was everyone's story, no one could not relate. Again, I thank Joyce Carol Oates for her knowing. I am sure she would understand the previous sentence.

• Open Disclosure: I helped prepare the first four chapters of the book and the "Care and feeding of a Linux System Administrator". So for that I put

the rating where the average seems to be.Reviewers who feel the book is not technical are correct. When the book was in process the world really knew little about Linux and the average business decision maker knew even less. Netware, OS/2, and Windows for Workgroups ruled the day and that's what corporate decision makers were used to. Those tools had significant vendor support in training, manuals, and for pay support.In the 90's Linux introduced a new paradigm (obligatory business speak) that said "You have control". It broke the absolute dependance on the vendor for support resolution and new code fixes. It provided tools that required creativity and imagination to use, not just another training class. Business leaders needed to know what was there for them and Marcus sought to give them an introduction that covered several possible needs.The world has changed, and for the better, in my not overly humble opinion. While I'd love to take some of the credit it really belongs to the early managers who were brazen enough to give Linux a try and brave enough to hang on for the wild ride that followed.
