Why LGBTQ+ people must resist the seduction of dignity In 2015, when the Supreme Court declared that gay and lesbian couples were entitled to the "equal dignity" of marriage recognition, the concept of dignity became a cornerstone for gay rights victories. In *Disrupting Dignity*, Stephen M. Engel and Timothy S. Lyle explore the darker side of dignity, tracing its invocation across public health politics, popular culture, and law from the early years of the HIV/AIDS crisis to our current moment. With a compassionate eye, Engel and Lyle detail how politicians, policymakers, media leaders, and even some within LGBTQ+ communities have used the concept of dignity to shame and disempower members of those communities. They convincingly

show how dignity—and the subsequent chase to be defined by its terms—became a tool of the state and the marketplace thereby limiting its more radical potential. Ultimately, Engel and Lyle challenge our understanding of dignity as an unquestioned good. They expose the constraining work it accomplishes and the exclusionary ideas about respectability that it promotes. To restore a lost past and point to a more inclusive future, they assert the worthiness of queer lives beyond dignity's limits.

Physical inactivity is a key determinant of health across the lifespan. A lack of activity increases the risk of heart disease, colon and breast cancer, diabetes mellitus, hypertension, osteoporosis, anxiety and depression and others diseases. Emerging literature has suggested that in terms of mortality, the global population health burden of physical inactivity approaches that of cigarette smoking. The prevalence and substantial disease risk associated with physical inactivity has been described as a pandemic. The prevalence, health impact, and evidence of changeability all have resulted in calls for action to increase physical activity across the lifespan. In response to the need to find ways to make physical activity a health priority for youth, the Institute of Medicine's Committee on Physical Activity and Physical Education in the School Environment was formed. Its purpose was to review the current status of physical activity and physical education in the school environment, including before, during, and after school, and examine the influences of physical activity and physical education on the short and long term physical, cognitive and brain, and psychosocial health and development of children and adolescents. Educating the Student Body makes recommendations about approaches for strengthening and improving programs and policies for physical activity and physical education in the school environment. This report lays out a set of guiding principles to guide its work on these tasks. These included: recognizing the benefits of instilling life-long physical activity habits in children; the value of using systems thinking in improving physical activity and physical education in the school environment; the recognition of current disparities in opportunities and the need to achieve equity in physical activity and physical education; the importance of considering all types of school environments; the need to take into consideration the diversity of students as recommendations are developed. This report will be of interest to local and national policymakers, school officials, teachers, and the education community, researchers, professional organizations, and parents interested in physical activity, physical education, and health for school-aged children and adolescents.

To ensure its members are well-prepared, the profession should institute residency training for nurses, increase the percentage of nurses who attain a bachelor's degree to 80 percent by 2020, and double the number who pursue doctorates. Furthermore, regulatory and institutional obstacles -- including limits on nurses' scope of practice -- should be removed so that the health system can reap the full benefit of nurses' training, skills, and knowledge in patient care.
