Petri Nets were introduced in the doctoral dissertation by K.A. Petri, titled "Kommunikation mit Automaten" and published in 1962 by University of Bonn. Petri Nets are graphical (the intuitive graphical modeling language) and mathematical (advanced formal analysis method) tool. The concurrence of performed actions is the natural phenomenon due to which Petri Nets are perceived as mathematical tool for modeling concurrent systems. The main

idea of this theory was modified by many researchers according to their needs, owing to the unusual "flexibility" of this theory. The present monograph focuses on Petri Nets applications in two main areas: manufacturing (section 1) and computer science (section 2). These two areas have still huge influence on our lives and our world. The theory of Petri Nets is still developing: some directions of investigations are presented in section 3. And at the end there is section 4 including some infesting facts concerning application of Petri Nets in the public area: the analysis and control of public bicycle sharing systems. The monograph shows the results of research

works performed with use of Petri Nets in science centers all over the world.

Process Plant Operating Procedures presents an introduction to the theory and applications of procedure synthesis that is primarily concerned with the task of conjecturing the sequence of controller

(or operator) actions needed to achieve designated operational goals in a given system. In order to facilitate practical implementation, the formal problem statement, two alternative approaches, their validation methods and a series of realistic examples are provided. The authors explore Petri nets and automata to identify the best paths leading to the specified goal of operation. The model-building methods for characterising all components in the given system, as well as the required control specifications, are explained with simple examples. The sequential control actions and the corresponding time schedule can then be identified accordingly. This book exposes practitioners to an important area of plant operations, teaching them effective approaches for procedure synthesis, enabling them to construct and solve scheduling models, and providing them with tools for simulation and validation of procedures and schedules. It is written for readers with a basic understanding of process design and control activities, and it will appeal to engineers in diverse fields with an interest in synthesizing operating procedures in process plants. Advances in Industrial Control reports and encourages the transfer of technology in control engineering. The rapid development

of control technology has an impact on all areas of the control discipline. The series offers an opportunity for researchers to present an extended exposition of new work in all aspects of industrial control.

The research of holonic and agent-based systems is developing very rapidly. The community around this R&D topic is also growing fast - despite the fact that the real-life practical implementations of such systems are still surprisingly rare. However, the managers in different branches of industry feel that the holonic and agent-based systems represent the only way of managing and controlling very complex, highly distributed systems exploring vast volumes of accumulated

knowledge. The relevant research and development activities gain more and more visible support from both industry as well as public sectors. Quite naturally, the number of scientific events aimed at the subject field is also growing rapidly. We see new lines of conferences like INDIN, we observe a strong focus of the already well-established conferences, e. g. , INCOM or ETFA, being shifted toward holonic and agent-based manufacturing systems. We see an increased interest of the IEEE System, Man and Cybernetics Society, especially its Technical Committee on Distributed Intelligent Systems which leverages the experience gathered

by the members of the former Holonic Manufacturing Systems (HMS) consortium. We see a clear orientation of the IEEE SMC Transactions, part C, toward applications of agent-oriented solutions. The same is true of the International Journal on Autonomous Agents and Multi-Agent Systems (JAAMAS). This is a really good sign of the increasing importance of the field.

## **REVIEW OF ANSI ISA 18 2 2009 SII**

- Foundation consists of five stories separated by several decades each. The Trantorian Empire has lost its hold on the outer perimeter of the galaxy. Hari Seldon, founder of the predictive science of psychohistory, knows that the Empire is doomed to collapse and that thirty millennia of barbarism and anarchy will ensue

before a second empire will rise. But Seldon claims to know a way to shorten the dark ages from 30,000 years to a single millennium. The stories in Foundation chronicle the infancy and development of Seldon's Foundation society initially established on the remote planet Terminus. Seldon's psychohistory predicts several crises that the Foundation must survive in order to bring about the desired drastic shortening of the dark ages. Four of the five stories each describe a crisis that confronts the Foundation. So far I've read the Robot series, the Empire series, and the first three books in the Foundation series (Prelude to Foundation, Forward the

Foundation, Foundation). I find the epic story so far to be extremely engaging and imaginative. The stories in Foundation are a bit disconnected and not fleshed out enough, but nevertheless do a more than adequate job of describing the fall of the Galactic Empire.

- With respect to Alvin Schwartz, there's nothing terribly inspired about the writing, but it is a children's book and I adored it when I was young. What made these books incredible, was Stephen Gammell's artwork, of which I'm still a huge fan. I was very young when I was given these books for the first time and I would peer over the images, staring at each one. And yes, they scared me. But

that was the fun! They didn't traumatize me, they just scared me in a delightful way. Releasing a new edition of this work without Gammell's art is like slapping two plain pieces of bread together and calling it a sandwich.
