REVIEW OF AN INSIGHT INTO CHEMICAL ENGINEERING SUBRAMANIAN M

- If you're a homebrew neophyte (like I am) you will find this text absolutely invaluable when preparing your first few batches. I was a bit intimidated by my homebrew equipment when I first received it, but this book helped guide me through the process of brewing my first batch. I've now read it cover to cover and learned quite a lot about grains, malt extract, hops... etc. There's a fair amount of recipes as well, both extract based (which are easier) and grain. I highly recommend this book for someone who is new to brewing.
- I'm a former editor for a local homebrew club, and back when I was regularly brewing, I was a BJCP 'recognized' beer judge in many local homebrewing competitions in my area. Having said that, I can also say that in my personal experience, this is probably THE BEST INTRODUCTORY book available on the subject for first-time homebrewers. Charlie wrote this with a highly contagious level of enthusiasm, his recipes are diverse and creative (sometime a little TOO creative), and he covers all the

essential basic techniques. His meadmaking techniques, however, are a bit weak (ex: he doesn't really discuss critical items like acidity measurement/control, or campden use ... hence the 4 stars instead of 5) - but that's only apparent to me because I've got some meadmaking and winemaking experience of my

own. Anyway, there's more than enough in Charlie's book to get you started - there are other authors & books available when you're ready to pursue more advanced refinements and techniques. Highly recommended.
