REVIEW OF SOMETHING HAPPENED

- Here are a whole bunch of general recommendations for tuning, however nothing specific, a lot of the general stuff they teach you in your basic CS curriculum. CPU registers are faster than memory, SCSI is faster than disk, etc.

There is some useful stuff on network performance tuning. Also, a few terrible typos in the book that really should have been caught. The numbers also seem out of date for a book published in Oct 98 (100Mhz PC processors being top of the line in this book)Not much material here on optimizing NT or NT hardware, which would be nice.If you've never optimized a system, the info here might be useful, otherwise most of it isn't new.

- I read this book when it first came out. Loved it and have re-read it a number of times. Powers that be -- please create a spot in "Kindleland" for this wonderful tale.
