Scientific meetings on programmable devices and systems began in 1995 with the PDS'95 event organised by the Institute of Electronics, Silesian University of Technology (SUT). Many papers on the issues of programmable devices and systems were presented at numerous conferences and workshops devoted to electronics and circuit theory yet there were no workshops devoted solely to those particular topics. Combined with the belief that some specific common problems appeared in the area of PDS justified the decision to organise the PDS meeting. Are you an RTL or system designer that is currently using, moving, or planning to move to an HLS design environment? Finally, a comprehensive guide for designing hardware using C++ is here. Michael Fingeroff's High-Level Synthesis Blue Book

presents the most effective C++ synthesis coding style for achieving high quality RTL. Master a totally new design methodology for coding increasingly complex designs! This book provides a step-by-step approach to using C++ as a hardware design language, including an introduction to the basics of HLS using concepts familiar to RTL designers. Each chapter provides easy-to-understand C++ examples, along with hardware and timing diagrams where appropriate. The book progresses from simple concepts such as sequential logic design to more complicated topics such as memory architecture and hierarchical sub-system design. Later chapters bring together many of the earlier HLS design concepts through their application in simplified design examples. These examples illustrate the fundamental principles behind C++ hardware design, which will translate to much larger designs. Although this book focuses primarily on C and C++ to present the basics of C++ synthesis, all of the concepts are equally applicable to SystemC when describing the core algorithmic part of a design. On completion of this book, readers should be well on their way to becoming experts in high-level synthesis.

## REVIEW OF SIEMENS MANUAL TRANSFER SWITCH

- Ever since I saw The Clan of the Cave Bear on TV in the 5th grade I have loved Jean Auel! Right after the movie ended I realized my dad HAD that book! In 5th grade I read The Clan of the Cave Bear, in 6th I read The Valley of Horses, in 7th I read The Mammoth Hunters and The Plains of Passage, and then finally in the 11th grade I got to read The Shelters of Stone!! I feel that I waited 6 years for a book of lower quality. Ayla no longer has serious struggles, just that people hate her for being perfect! I found myself imagining her making a major mistake, starting a fight, or even getting hurt while hunting just to add to the action! This was the overall most boring book of the series, even with all the descriptionary pages I glazed over in The Plains of Passage! I don't even remember what the masses of the pages were about! This series is my favorite, I even started writing because of it! I refuse to give up hope! There is, after all, one more book! I'm still waiting, but not as eagerly...

- I received my copy of this book last week, starting reading it three days ago, and have not wanted to put it down. It is as wonderful as the four previous books. Since I have always loved history, it is wonderful to learn about parts of the world, old and new, through wonderful stories like this. While I know the characters are fiction, I know she has written wonderful descriptions about how the world must have been in that time period. Thank you, Jean, I can hardly wait for the next one. Please don't make us wait as long as we have for this one. I can only say, read the book, you will love it.
