Bruce King towered over the political

landscape of New Mexico in the last half of the twentieth century. Born the son of a homesteader in the tiny Santa Fe County farm-and-ranch community of Stanley, King decided in seventh grade to be governor of New Mexico. The story of how he accomplished that goal-three times!-plays out against the tremendous transformations occurring in the society, culture, politics, and business of New Mexico since World War II. When King won his first Santa Fe County Commission seat in 1954 at age 29, running for office was a down-home affair. Politics was personal. But as he served in office and climbed the political ladder toward his lifelong ambition, New Mexico changed. The state's population shifted away from the rural communities to the rapidly expanding cities, while the once-dominant agricultural interests in the legislature yielded to the emerging urban voting blocs. Meanwhile, the challenges of governing grew ever more complex. King's well-recognized skills of mediation and conciliation helped him lead the state through a time of often-bewildering change. This book is rich with colorful stories as King recalls the major events of his career and conveys the human side of campaigning, governing, political deal-making, and sparring with the press. He also talks about his friendships and encounters with many of the leading national and state political figures of our time, including President Bill Clinton, President Ronald Reagan, President Jimmy Carter, Senator Pete Domenici, and then Energy Secretary Bill Richardson. A classic tale of political intuitions spiced by New

Mexico flavor as unique as Hatch green chile, "Cowboy in the Roundhouse" is lively reading. As famed mystery writer Tony Hillerman writes in his introduction to the book, "While I count myself among the many who wanted Bruce King to write an autobiography, I doubt if any of us had much hope he'd get around to doing it. Now he has and it's even better than we'd expected." **8 Charles Poling is a journalist and author who could not remember a time when Bruce King was not governor. Poling writes fiction and true stories about the history, business, politics and daily life of New Mexico. He currently makes his home in Placitas, where the past, present, and future blend together and resonate with the peculiar harmony and dissonance known as New Mexico.

In 1968 when I forsook horticulture and plant physiology to try, with the help of Sea Grant funds, wetland ecology, it didn't take long to discover a slim volume published in 1959 by the University of Georgia and edited by R. A. Ragotzkie, L. R. Pomeroy, J. M. Teal, and D. C. Scott, entitled "Proceedings of the Salt Marsh Conference" held in 1958 at the Marine Institute, Sapelo Island, Ga. Now forty years later, the Sapelo Island conference has been the major intellectual impetus, and another Sea Grant Program the major backer, of another symposium, the "International Symposium: Concepts and Controversies in Tidal Marsh Ecology". This one re-examines the ideas of that first conference, ideas that stimulated four decades of research and led to major legislation in the United States to conserve coastal wetlands. It is dedicated, appropriately, to two then young scientists - Eugene P. Odum and John M. Teal - whose inspiration has been the starting place for a generation of coastal wetland and estuarine research. I do not mean to suggest that wetland research started at Sapelo Island. In 1899 H. C. Cowles described successional processes in Lake Michigan freshwater marsh ponds. There is a large and valuable early literature about northern bogs, most of it from Europe

and the former USSR, although Eville Gorham and R. L. Lindeman made significant contributions to the American literature before 1960. V. J.

Seventy-five percent of processed foods on supermarket shelves—from soda to soup, crackers to condiments—contain genetically engineered ingredients. The long-term effects of these foods on human health and ecology are still unknown, and public concern has been steadily intensifying. This new book from the Council for Responsible Genetics gathers the best, most thought-provoking essays by the leading scientists, science writers, and public health advocates. Collectively, they address such questions as: Are GM foods safe and healthy for us? Will GM food really solve world hunger? Who really controls the power structure of food production? Are GM foods ecologically safe and sustainable? Why is it so difficult to get GM foods labeled in the US? What kinds of regulations and policies should be instituted? How is seed biodiversity, of lack thereof, affecting developing countries? Should animals be genetically modified for food? How are other countries handling GM crops? Ultimately, this definitive book encourages us to think about the social, environmental, and moral ramifications of where this particular branch of biotechnology is taking us, and what we should do about it.

Thus, in fifteenth century Italy and Spain there came into being what we may call a "Hebrew Scholasticism": Jewish authors composed philosophical treatises in which they discussed the same questions and used the same methods as contemporary Christian Schoolmen. These thinkers were not simply influenced by Scholasticism: they were real Schoolmen who tried to participate (in a different language) in the philosophical debate of contemporary Europe. A history of "Hebrew Scholasticism" in the fifteenth century is yet to be written. Most of the sources themselves remain unpublished, and their contents and relationship to Latin sources have not yet been studied in detail. What is needed is to present, edit, translate and comment on some of the most significant texts of "Hebrew Scholasticism", so that scholars can attain a more precise idea of its extent and character. This book aims to respond to this need.

REVIEW OF STIHL BG55 PARTS DIAGRAM

- As always, Gerard Durrell's works make me want to hop on a flight to Greece right now. His imagery of the lush flora and fauna there make it seem irresistible to anyone, especially small

boys. Though it was an enjoyable read, it seemed a bit too similar to *My Family and Other Animals*, as though this sequel was everything he had forgotten to put into the first one, which is exactly what the author states in the introduction. This book seemed to focus a bit more on the animals, less on the comical family, and though sea life is fascination, crustaceans do get a bit old. This book is very relaxing to read, and almost makes you feel like you are a little boy again. Slow paced and funny, this enjoyable book put Corfu at the top of my list of places to go.

- He wakes up in a London hospital in terrible pain. It's the nineteenth century, when hospitals kill as many people as they cure. He doesn't know how he got there or who he is. His very face in the mirror is the face of a stranger. Only when his boss appears at his bedside does he learn his name and profession: William Monk, police detective. Out of fear of seeming incompetent and/or losing his livelihood, Monk hides his memory loss from his landlady, his sister and his professional associates. Back at the station, he's given a difficult and sensitive case, the brutal murder of Major Joscelyn Grey, and he struggles to solve it with no knowledge of his own skills. Oddly, his skills seem to be in place although his memory is not. This seems a bit far-fetched, but I'm assuming the author has researched amnesia. So William Monk is in the position of detecting a murderer, while detecting his own personality and history. He does observe, to his chagrin, that no one seemed to like the original William Monk, and he aspires to change this. The story, believable or not, is a good one, replete with family scandals, romantic elements and Victorian ambiance. I look forward to

reading the next book in the series: A Dangerous Mourning. Will Monk ever recover his past entirely? Will he fall in love with - but I mustn't speculate!
