Dr. Suzuki questioned why all vocalists vocalize every day to improve their voices, but instrumentalists do not do so every day with their instruments. He believes that on any instrument, one

needs to practice to make a more beautiful tone. First he talks about playing a beautiful resonant tone with the bow while plucking the string with a finger. When a pizzicato is played, the resonance goes on for a long time. Students should listen to that resonance and play the same kind of clear beautiful sound. He talks about how to make a difference in the tone by using a different bow speed, how to practice to find the resonance point, how to change the weight of the arm on the bow to produce a different kind of tone, and how to change tone color. This book includes all of Dr. Suzuki's basic ideas about tone.

This book combines some of the most important elements found in separate scale methods, position etudes and introductory theory studies. Scales are arranged by key, and focus on the customary arpeggios and double stops; but also include position study particularly relevant to that key. For example, when playing in the key of C, second position can eliminate unnecessary shifting and string crossing. In similar fashion, third position is helpful when playing in the key of D. This book allows for flexibility in fingering. Teachers can customize the exercises to meet specific needs, even as those needs change for the student. Minor

scales are contained in a separate section, and have the unique feature of modulating to the relative major. Pages with blank staff are included to allow for additional exercises. Players of jazz and other contemporary music can use this space to write in riffs or chord progressions to use in improvisation. Shifting exercises can also be entered. This book pays particular attention to keys with six and seven accidentals. The en-harmonic exercises and pieces provided help to reinforce understanding of positions in a way that is effective, and also fun.

With a Foreword writer Steven Weinberg
In this richly illustrated book, Nobel Laureate Gerard 't Hooft and Theoretical Physicist Stefan Vandoren describe the enormous diversity of natural

phenomena that take place at different time scales. In the tradition of the bestseller Powers of Ten, the authors zoom in and out in time, each step with a factor of ten. Starting from one second, time scales are enlarged until processes are reached that take much longer than the age of the universe. After the largest possible eternities, the reader is treated to the shortest and fastest phenomena known. Then the authors increase with powers of ten, until again the second is reached at the end of the book. At each time scale, interesting natural phenomena occur, spread over all scientific disciplines: orbital and rotation periods of planets and stars, decay times of elementary particles and atoms, biological rhythms and evolution processes, but also the different geological time scales.

“Pleasingly accessible volume that will give pleasure to academics, students, connoisseurs of coffee-table books and even the people who compile questions for Trivial Pursuit ... Can be enjoyed as a source of scientific stories and images, as an unusual perspective on history, as a popular account of modern physics, and so on. Underneath them all is a wealth of serious science that will give readers insights into abstract fundamental ideas via concrete realities ... Every science teacher would benefit from reading Time in Powers of Ten, but I hope it will have an even wider reach.” Times Higher Education “The authors have compiled a refreshing mix of historical anecdotes and examples from music to sport and biology to astronomy to lighten up the heavier taste of particle physics and cosmology... It is both an enjoyable read and very pleasant to browse at leisure... It fully conveys the authors' amazement at — as Feynman put it — our fantastically marvellous universe.” Nature Physics “The authors introduce the reader to the diversity of nature in a novel way by describing typical and interesting phenomena that occur or have occurred on many different time scales. The time scales considered differ by powers of ten, as the title of the book says, from the shortest times of which we have knowledge to the longest. I am sure many readers will enjoy the book as I have.” Edward Witten, Fields Medalist “Time is an essential dimension of life. Indeed, its remarkable and awesome variation of scale shapes the natural world. This book by Gerard 't Hooft and Stefan Vandoren gives us an exposé of a wide range of natural phenomena and their associated time scales, spanning the very small, the very large, and the life events of our universe. The book is

elegantly illustrated and should be an enjoyable read for anyone interested in a deeper understanding of the fourth dimension, time, and how it shapes our lives.” Ahmed Zewail, Nobel Laureate in Chemistry “Like the original Powers of Ten, it is a wonderful book for flipping through and thinking about puzzles and is a good introduction to basics like how to tell a quark from a lepton.” The Dispatch “The book reveals the extraordinary complexity of our universe — it is a fascinating journey.” CERN Courier “This is a fascinating coffee-table book ranging from the unimaginably huge to the unimaginably tiny.” Ultramicroscopy “You can read the book in any direction. Delving into the index takes you on a mystery tour of the time domain. Helpfully, all the major phenomena are gathered together on an illustrated time line. This book is definitely one for your reading list.” Physics Education

REVIEW OF FIDDLE TIME SCALES 1 PIECES PUZZLES SCALES AND ARPEGGIOS

- I'm not much of a book reader so I don't know what I was thinking when I first picked up this book of over a thousand pages... but I do not regret it at all. I read the whole thing and I never lost interest in it! The main character is wonderfully made, the plot keeps moving, and I loved seeing how all the characters connected. The only thing that I didn't like was one character Eugenie Danglars, she is a minor character but in the few chapters that she is in, the book seemed to slow down in pace and I found myself skimming those chapters. If it wasn't for her I think the book would be much better but w/e she isn't a major character so it's not that big of a deal. I highly suggest that you jot down notes on the characters as you read the story since there are about 40 characters more or less also if you don't have any knowledge of *The Arabian Nights* you may want to consider at least reading a summary or movie on it because Dumas frequently makes comparisons to it towards the middle of the book. So as I said before this book is truly wonderful! Don't be scared by its large size!

- Mystery, suspense, interesting characters, plot lines, and sub-plot lines. Fast-paced, adventure, love story,

pirates, jail escape, what more can you possibly want in a book?! Perhaps
