*Relocation Policies and Procedures* Jeffrey Frank Jones

This book grew from a one-semester course offered for many years to a mixed audience of graduate and undergraduate students who have not had the luxury of taking a course in measure theory. The core of the book covers the basic topics of independence, conditioning, martingales, convergence in distribution, and Fourier transforms. In addition there are numerous sections treating topics traditionally thought of as more advanced, such as coupling and the KMT strong approximation, option pricing via the equivalent martingale measure, and the isoperimetric inequality for Gaussian processes. The book is not just a presentation of mathematical theory, but is also a discussion of why that theory takes its current form. It will be a secure starting point for anyone who needs to invoke rigorous probabilistic arguments and understand what they mean.

This book is dedicated to improving healthcare through reducing delays experienced by patients. With an interdisciplinary approach, this new edition, divided into five sections, begins by examining healthcare as an integrated system. Chapter 1 provides a hierarchical model of healthcare, rising from departments, to centers, regions and the "macro system." A new chapter demonstrates how to use simulation to assess the interaction of system components to achieve performance goals, and Chapter 3 provides hands-on methods for developing process models to identify and remove bottlenecks, and for developing facility plans. Section 2 addresses crowding and the consequences of delay. Two new chapters (4 and 5) focus on delays in emergency departments, and Chapter 6 then examines medical outcomes that result from waits for surgeries. Section 3 concentrates on management of demand. Chapter 7 presents breakthrough strategies that use real-time monitoring systems for continuous improvement. Chapter 8 looks at the patient appointment system, particularly through the approach of advanced access. Chapter 9 concentrates on managing waiting lists for surgeries, and Chapter 10 examines triage outside of emergency departments, with a focus on allied health programs. Section 4 offers analytical tools and models to support analysis of patient flows. Chapter 11 offers techniques for scheduling staff to match patterns in patient demand. Chapter 12 surveys the literature on simulation modeling, which is widely used for both healthcare design and process improvement. Chapter 13 is new and demonstrates the use of process mapping to represent a complex regional trauma system. Chapter 14 provides methods for forecasting demand for healthcare on a region-wide basis. Chapter 15 presents queueing theory as a method for modeling waits in healthcare, and Chapter 16 focuses on rapid delivery of medication in the event of a catastrophic event. Section 5 focuses on achieving change. Chapter 17 provides a diagnostic for assessing the state of a hospital and using the state assessment to select improvement strategies. Chapter 18 demonstrates the importance of optimizing care as patients transition from one care setting to the next. Chapter 19 is new and shows how to implement programs that improve patient satisfaction while also improving flow. Chapter 20 illustrates how to evaluate the overall portfolio of patient diagnostic groups to guide system changes, and Chapter 21 provides project management tools to guide the execution of patient flow projects.

This book traces the development of RDA, explaining why it was needed and how it was developed. The basics of the conceptual models for RDA are covered, showcasing the origins of the structure and vocabulary of RDA. It then compares AACR2 to RDA and looks at specific changes in the cataloging code. The author also addresses how this development may enable library data to be housed on the Semantic Web and provides practical advice that librarians and catalogers can act upon now to prepare for RDA.

All organisations are affected by fraud, but disproportionately so for SMEs given their size and vulnerability. Some small businesses that have failed to manage business fraud effectively have not only suffered financially but also have not survived. This book provides a guide for SMEs to understand the current sources of business fraud risk and the specific risk response actions that can be taken to limit exposure, through the structured discipline of enterprise risk management. The book provides: A single-source reference: a description of all of the common fraud types SMEs are facing in one location. An overview of enterprise risk management: a tool to tackle fraud (as recommended by the Metropolitan Police Service and many other government-sponsored organisations). Illustrations of fraud events: diagrams/figures (where appropriate) of how frauds are carried out. Case studies: case studies of the fraud types described (to bring the subject to life and illustrate fraud events and their perpetrators) enabling readers to be more knowledgeable about the threats. Sources of support and information: a description of the relationship between the government agencies and departments. What to do: 'specific actions' to be implemented as opposed to just recommending the preparation of policies and processes that may just gather dust on a shelf. The book gives SMEs a much better understanding of the risks they face and hence informs any discussion about the services required, what should be addressed first, in what order should remaining requirements be implemented and what will give the best value for money.

- I wanted to see if my iPhone would still work with the Kindle app having it's in app shopping removed by Apple. It worked great and I downloaded this book to check it out. I tried to buy a book too but my Amazon store card doesn't work with Kindle so I will just read their free books instead.

- Although I have not read all of James Michener's books, the ones I have read were very good reading and helped me to remember history. Most people have had at least one teacher in their past that stood out from the others. I had a couple, but the one I will never forget was my history teacher, Mrs. Murray. She had a way of telling a story about historical events. Even now, thirty years later, I still recall her with fond memories. She taught like Michener writes. I do have to admit though, that the first few chapters are at times hard to get through, but once you do, you're in for a good story. Diane & Greg Haugen
