Severe Storms, Deadly Heat Waves, Relentless Drought, Rising Seas, and the Weather of the Future Haymarket Books

Though contemporary European philosophy and critical theory have long had a robust engagement with Christianity, there has been no similar engagement with Buddhism—a surprising lack, given Buddhism's global reach and obvious affinities with much of Continental philosophy. This volume fills that gap, bringing together three scholars to offer individual, distinct, yet complementary philosophical takes on Buddhism. Focused on “nothing”—essential to Buddhism, of course, but also a key concept in critical theory from Hegel and Marx through deconstruction, queer theory, and contemporary speculative philosophy—the book explores different ways of rethinking Buddhism's nothing. Through an elaboration of “sunyata,” or emptiness, in both critical and Buddhist traditions; an examination of the problem of praxis in Buddhism, Marxism, and psychoanalysis; and an explication of a “Buddaphobia” that is rooted in modern anxieties about nothingness, Marcus Boon, Eric Cazdyn, and Timothy Morton open up new spaces in which the radical cores of Buddhism and critical theory are renewed and revealed.

For a Logic of Future Coexistence Open Humanities Press

We take for granted that only certain kind of things exist - electrons but not angels, passports but not nymphs. This is what we understand as 'reality'. But in fact, 'reality' varies with each era of the world, in turn shaping the field of what is possible to do, think and imagine. Our contemporary age has embraced a troubling and painful form of reality: Technic. Under Technic, the foundations of reality begin to crumble, shrinking the field of the possible and freezing our lives in an anguished state of paralysis. Technic and Magic shows that the way out of the present deadlock lies much deeper than debates on politics or economics. By drawing from an array of Northern and Southern sources - spanning from Heidegger, Junger and Stirner's philosophies, through Pessoa's poetry, to Advaita Vedanta, Bhartrhari, Ibn Arabi, Suhrawardi and Mulla Sadra's theosophies - Magic is presented as an alternative system of reality to Technic. While Technic attempts to capture the world through an 'absolute language', Magic centres its reconstruction of the world around the notion of the 'ineffable' that lies at the heart of existence. Technic and Magic is an original philosophical work, and a timely cultural intervention. It disturbs our understanding of the structure of reality, while restoring it in a new form. This is possibly the most radical act: if we wish to change our world, first we have to change the idea of 'reality' that defines it.

Essays on Dialectical Naturalism Graywolf Press

Having set global warming in irreversible motion, we are facing the possibility of ecological catastrophe. But the environmental emergency is also a crisis for our philosophical habits of thought, confronting us with a problem that seems to defy not only our control but also our understanding. Global warming is perhaps the most dramatic example of what Timothy Morton calls “hyperobjects”—entities of such vast temporal and spatial dimensions that they defeat traditional ideas about what a thing is in the first place. In this book, Morton explains what hyperobjects are and their impact on how we think, how we coexist with one another and with nonhumans, and how we experience our politics, ethics, and art. Moving fluidly between philosophy, science, literature, visual and conceptual art, and popular culture, the book argues that hyperobjects show that the end of the world has already occurred in the sense that concepts such as world, nature, and even environment are no longer a meaningful horizon against which human events take place. Instead of inhabiting a world, we find ourselves inside a number of hyperobjects, such as climate, nuclear weapons, evolution, or relativity. Such objects put unbearable strains on our normal ways of reasoning. Insisting that we have to reinvent how we think to even begin to comprehend the world we now live in, Hyperobjects takes the first steps, outlining a genuinely postmodern ecological approach to thought and action.

University of Chicago Press

Bruno Latour is among the most important figures in contemporary philosophy and social science. His ethnographic studies have revolutionized our understanding of areas as diverse as science, law, politics and religion. To facilitate a more realistic understanding of the world, Latour has introduced a radically fresh philosophical terminology and a new approach to social science, 'Actor-Network Theory'. In seminal works such as *Laboratory Life, We Have Never Been Modern* and *An Inquiry into Modes of Existence*, Latour has outlined an alternative to the foundational categories of 'modern' western thought & particularly its distinction between society and nature & that has major consequences for our understanding of the ecological crisis and of the role of science in democratic societies. Latour's 'empirical philosophy' has evolved considerably over the past four decades. In

this lucid and compelling book, Gerard de Vries provides one of the first overviews of Latour's work. He guides readers through Latour's main publications, from his early ethnographies to his more recent philosophical works, showing with considerable skill how Latour's ideas have developed. This book will be of great value to students and scholars attempting to come to terms with the immense challenge posed by Latour's thought. It will be of interest to those studying philosophy, anthropology, sociology, science and technology studies, and almost all other branches of the social sciences and humanities.

Romantic Consumerism and the Exotic Princeton University Press

What is reality, really? Are humans more special or important than the non-human objects we perceive? How does this change the way we understand the world? We humans tend to believe that things are only real in as much as we perceive them, an idea reinforced by modern philosophy, which privileges us as special, radically different in kind from all other objects. But as Graham Harman, one of the theory's leading exponents, shows, Object-Oriented Ontology rejects the idea of human specialness: the world, he states, is clearly not the world as manifest to humans. At the heart of this philosophy is the idea that objects - whether real, fictional, natural, artificial, human or non-human - are mutually autonomous. In this brilliant new introduction, Graham Harman lays out the history, ideas and impact of Object-Oriented Ontology, taking in everything from art and literature, politics and natural science along the way. Graham Harman is Distinguished Professor of Philosophy at SCI-Arc, Los Angeles. A key figure in the contemporary speculative realism movement in philosophy and for his development of the field of object-oriented ontology, he was named by Art Review magazine as one of the 100 most influential figures in international art.

Untold Histories, Wild Possibilities Dark EcologyFor a Logic of Future Coexistence

A highly original theory of the political, the book explores the literal and metaphorical flare-ups in political theology, revolutionary thought, radical protests, and global energy production.

Environmental Thought Polity

Given the escalating and existential nature of our current environmental crises, environmental sociology has never mattered more. We now face global environmental threats, such as climate change and biodiversity loss, as well as local threats, such as pollution and household toxins. The complex interactions of such pervasive problems demand an understanding of the social nature of environmental impacts, the underlying drivers of these impacts, and the range of possible solutions. Environmental sociologists continue to make indispensable contributions to this crucial task. This compact book introduces environmental sociology and emphasizes how environmental sociologists do “public sociology,” that is, work with broad public application. Using a diversity of theoretical approaches and research methods, environmental sociologists continue to give marginalized people a voice, identify the systemic drivers of our environmental crises, and evaluate solutions. Diana Stuart shines a light on this work and gives readers insight into applying the tools of environmental sociology to minimize impacts and create a more sustainable and just world.

The Poetics of Spice Springer

A book about ecology without information dumping, guilt inducing, or preaching to the choir. Don't care about ecology? You think you don't, but you might all the same. Don't read ecology books? This book is for you. Ecology books can be confusing information dumps that are out of date by the time they hit you. Slapping you upside the head to make you feel bad. Grabbing you by the lapels while yelling disturbing facts. Handwringing in agony about “What are we going to do?” This book has none of that. Being Ecological doesn't preach to the eco-choir. It's for you—even, Timothy Morton explains, if you're not in the choir, even if you have no idea what choirs are. You might already be ecological. After establishing the approach of the book (no facts allowed!), Morton draws on Kant and Heidegger to help us understand living in an age of mass extinction caused by global warming. He considers the object of ecological awareness and ecological thinking: the biosphere and its interconnections. He discusses what sorts of actions count as ecological—starting a revolution? going to the garden center to smell the plants? And finally, in “Not a Grand Tour of Ecological Thought,” he explores a variety of current styles of being ecological—a range of overlapping orientations rather than preformatted self-labeling. Caught up in the us-versus-them (or you-versus-everything else) urgency of ecological crisis, Morton suggests, it's easy to forget that you are a symbiotic being entangled with other symbiotic beings. Isn't that being ecological?

An Intellectual Herbarium U of Minnesota Press

Heathen Earth: Trumpism and Political Ecology looks beyond the rising fortunes of authoritarian nationalism in a fossil-fueled late capitalist world to encounter its conditions. Trumpism represents an alternative to the forces undermining the very cosmology of the modern West from two opposing directions. The global economy, pinnacle of modernization, has brought along a dark side of massive inequality, corrupt institutions, colonial violence, and environmental destruction, while global warming, nadir of modernity, threatens to undo the foundations of all states and all markets. To the vertigo of placelessness symptomatic of globalization is added the ecological vertigo of landlessness. With reality slowly fragmenting, it is only too obvious in this light that Trumpism and other nationalist movements would attract massive hordes of supporters. Promising to expel foreigners and to restore unity and equality by taking power back from the global elites, while utterly denying the climate science that calls ordinary means of subsistence and consumption radically into question, Trumpism can be seen as an antidote to the toxic combination of global markets and global warming. The irony, of course, is that Trumpism only responds to these dangers by doubling down on the reckless expansionist logic that gave rise to them in the first place. This book, composed entirely between November 8, 2016 and January 20, 2017, examines Trumpism according to its regime of political representation (despotism), its political ontology (nativism), and its political ecology (geocide), while laying the groundwork for an alternative politics and a resistant, responsive ecology of the impossible.

DIFFERENT TYPES OF PUBLICATION REVIEWS

Book reviews been available in many types, each with its distinct purpose and style. As viewers, it's important to comprehend these different kinds of book assesses to understand what to anticipate and how to analyze them.

Object-Oriented Ontology Open Humanities Press

Cultures of Taste/Theories of Appetite brings two major critical impulses within the field of Romanticism to bear upon an important and growing field of research: appetite and its related discourses of taste and consumption. As consumption, in all its metaphorical variety, comes to displace the body as a theoretical site for challenging the distinction between inside and outside, food itself has attracted attention as a device to interrogate the rhetoric and politics of Romanticism. In brief, the volume initiates a dialogue between the cultural politics of food and eating, and the philosophical implications of ingestion, digestion and excretion.

Dark Ecology Harvard University Press

George Boolos was one of the most prominent and influential logician-philosophers of recent times. This collection, nearly all chosen by Boolos himself shortly before his death, includes thirty papers on set theory, second-order logic, and plural quantifiers; on Frege, Dedekind, Cantor, and Russell; and on miscellaneous topics in logic and proof theory, including three papers on various aspects of the Gödel theorems. Boolos is universally recognized as the leader in the renewed interest in studies of Frege's work on logic and the philosophy of mathematics. John Burgess has provided introductions to each of the three parts of the volume, and also an afterword on Boolos's technical work in provability logic, which is beyond the scope of this volume.

Social Organization; a Study of the Larger Mind Columbia University Press

A provocative and urgent essay collection that asks how we can live with hope in "an age of ecocide" Paul Kingsnorth was once an activist—an ardent environmentalist. He fought against rampant development and the depredations of a corporate world that seemed hell-bent on ignoring a looming climate crisis in its relentless pursuit of profit. But as the environmental movement began to focus on "sustainability" rather than the defense of wild places for their own sake and as global conditions worsened, he grew disenchanted with the movement that he once embraced. He gave up what he saw as the false hope that residents of the First World would ever make the kind of sacrifices that might avert the severe consequences of climate change. Full of grief and fury as well as passionate, lyrical evocations of nature and the wild, *Confessions of a Recovering Environmentalist* gathers the wave-making essays that have charted the change in Kingsnorth's thinking. In them he articulates a new vision that he calls "dark ecology," which stands firmly in opposition to the belief that technology can save us, and he argues for a renewed balance between the human and nonhuman worlds. This iconoclastic, fearless, and ultimately hopeful book, which includes the much-discussed "Uncivilization" manifesto, asks hard questions about how we've lived and how we should live.

Spacecraft Penguin UK

"Object-oriented ontology offers a startlingly fresh way to think about causality that takes into account developments in physics since 1900. Causality, argues, Object Oriented Ontology (OOO), is aesthetic. In this book, Timothy Morton explores what it means to say that a thing has come into being, that it is persisting, and that it has ended. Drawing from examples in physics, biology, ecology, art, literature and music, Morton demonstrates the counterintuitive yet elegant explanatory power of OOO for thinking causality."--Publisher's description.

Trumpism and Political Ecology Bloomsbury Publishing USA

Some thousands of years ago, the world was home to an immense variety of large mammals. From woolly mammoths and saber-toothed tigers to giant ground sloths and armadillos the size of automobiles, these spectacular creatures roamed freely. Then human beings arrived. Devouring their way down the food chain as they spread across the planet, they began a process of voracious extinction that has continued to the present. Headlines today are made by the existential threat confronting remaining large animals such as rhinos and pandas. But the devastation summoned by humans extends to humbler realms of creatures including beetles, bats and butterflies. Researchers generally agree that the current extinction rate is nothing short of catastrophic. Currently the earth is losing about a hundred species every day. This relentless extinction, Ashley Dawson contends in a

primer that combines vast scope with elegant precision, is the product of a global attack on the commons, the great trove of air, water, plants and creatures, as well as collectively created cultural forms such as language, that have been regarded traditionally as the inheritance of humanity as a whole. This attack has its genesis in the need for capital to expand relentlessly into all spheres of life. Extinction, Dawson argues, cannot be understood in isolation from a critique of our economic system. To achieve this we need to transgress the boundaries between science, environmentalism and radical politics. *Extinction: A Radical History* performs this task with both brio and brilliance.

The Philosopher's Plant Penguin UK

An accessible explanation of climate change summarizes its science while sharing insights into its implications for the future, answering key questions from the role of fossil fuels to the economic costs of reducing carbon emissions.

Generally, publication testimonials have a significant influence on the literary world and are essential for both readers and industry experts. By sharing our thoughts and suggestions, we can help to form the future of the publishing industry and sustain our favored authors.

Keep in mind, reading testimonials can help you make informed decisions about what to review next and can reveal you to brand-new authors and categories you might not have actually taken into consideration in the past.

REVIEW OF DARK ECOLOGY FOR A LOGIC OF FUTURE COEXISTENCE THE WELLEK LIBRARY LECTURES

- This Kindle edition of "Treasure Island" featuring N.C. Wyeth's famous illustrations is well-formatted and, surprise surprise, the illustrations are in FULL COLOR! Of course, you need to view it on Kindle for PC (free download) to view them that way, but it's nice to know this book is "future proofed" for the day when, hopefully, they will come up with color e-ink readers. My only criticism is that the beautiful cover painting, shown above, is nowhere to be found in the e-book itself.

- `Treasure Island' is an adventure novel that was written for children, but it will none the less provide much pleasure to the grown-ups. In this book, Steven tells the story of a young Scottish boy named Jim Hawkins, who stumbles upon a dreaded pirate's (Captain Flint) treasure map, and goes in search of it along with the village doctor and the squire. However they are not the only ones who knew about the hidden treasure. They are pursued by the former ruthless crewmembers of Captain Flint, these men will stop at nothing to lay their hands on the map! `Treasure Island' is absolutely great. From the beginning to the end its filled with non-stop action. Jim Hawkins is telling the story, so as young people are, he is straight to the point. No unnecessary details are given which will certainly appeal to youngsters and best of all it is written in simple and plain English. For children this is a must-read. If you think `pirates', `treasures' are too childish for you then I suggest you read it in your leisure moments. I'm sure you won't be able to put it aside till you've read the last page!
