A Brookings Institution Press and the National University of Singapore Press publication This is the story of the Singapore healthcare system: how it works, how it is financed, its history, where it is going, and what lessons it may hold for national health systems around the world. Singapore ranks sixth in the world in healthcare outcomes, yet spends proportionally less on healthcare than any other high-income country. This is the first book to set out a comprehensive system-level description of healthcare in Singapore, with a view to understanding what can be learned from its unique system design and development path. The lessons from Singapore will be of interest to those currently planning the future of healthcare in emerging economies, as well as those engaged in the urgent debates on healthcare in the wealthier countries faced with serious long-term challenges in healthcare financing. Policymakers, legislators, public health officials responsible for healthcare systems planning, finance and operations, as well as those working on healthcare issues in universities and

think tanks should understand how the Singapore system works to achieve affordable excellence.

Physiological, Molecular Breeding and Genetic Perspectives Springer Science & Business Media

This book brings together recent advances in the area of abiotic stress tolerance in various vegetables, fruit crops, plantation crops and tuber crops. The main challenges to improving the productivity of horticultural crops are the different types of abiotic stresses generally caused by climate change at the regional and global level. Heat, drought, cold and salinity are the major abiotic stresses that adversely affect growth and productivity and can trigger a series of morphological, physiological, biochemical and molecular changes in various horticultural crops. To date, there are no books covering horticultural crop-specific abiotic stress tolerance mechanisms and their management. Addressing that gap, the book is divided into 2 sections, the first of which highlights recent advances in the general aspects of abiotic stress tolerance like the role of hormones, reactive oxygen species, seed treatments, molecular mechanisms of heat tolerance and heavy metal toxicity, while the second focuses on the abiotic stress tolerance mechanisms of various vegetables, fruit crops, plantation crops and tuber crops. It includes comprehensive discussions of fruit crops

like mango, grapes, banana, litchi and arid zone fruits; vegetables crops like tomato, capsicum, onion and tuber crops; and plantation crops like coconut, areca nut, oil palm and black pepper. Among the strategies for plant stress survival, examples of both avoidance and tolerance relevant to particular crops are examined in detail, supported by selected comprehensive case studies of progress. As such, the book offers a valuable resource suited for scientists and graduate students working in the fields of crop improvement, genetic engineering, and the abiotic stress tolerance of horticultural crops.

Orthopaedic Physiotherapy is one of the major specialties of the art and the science of physiotherapy. It plays a vital role in the rehabilitation of the physically handicapped. There are a large number of books on orthopaedics and physiotherapy, but they all deal with these subjects as a separate entity. There is not even a single book that provides the overall picture of the total therapeutic management. This book, the first of its kind, fills the gap. About the Author : - Vijaya D. Joshi, (MD) Professor & Head, Terna Medical College, Nerul, Navi Mumbai, Formerly, Professor of Physiology, Seth G. S. Medical College, Parel, Mumbai, India.

Principles of Medical Physiology
Springer Science & Business Media

Over 400 years ago, Swiss alchemist and physician Paracelsus (1493-1541) cited: "All substances are poisons; there is none that is not a poison. The right dose differentiates a poison from a remedy." This is often condensed to: "The dose makes the poison." So, why are we overtly anxious about intoxications? In

fact, poisons became a global problem with the industrial revolution. Pesticides, asbestos, occupational chemicals, air pollution, and heavy metal toxicity maintain high priority worldwide, especially in developing countries. Children between 0 and 5 years old are the most vulnerable to both acute and chronic poisonings, while older adults suffer from the chronic effects of chemicals. This book aims to raise awareness about the challenges of poisons, to help clinicians understand current issues in toxicology.

REVIEW OF PHYSIOLOGY BY VD JOSHI

- This book is a good reference book for pregnant women. My niece, Anslie

Henderson, is the baby that the sonagram pictured on the second page of the "Tenth Lunar Month" shows, so I'm a little biased!

- I picked up this book as a martial artist hoping to help me with my Ki breathing exercises. This book improved my

breathing technique introduced me to yoga and eastern thought. "Science of Breath" provides a great balance between western theories and eastern ideas. This book would be a good aid to anyone in the martial arts or those who just study Ki.
