REVIEW OF PEARSON GEOMETRY HONORS

TEXTBOOK ANSWERS

- Copyrighted in 1954, this was one of the first non-fiction books I remember owning; years later I decided to try to track down a copy and found that it's just as relevant and enjoyable today as it was then. Probably best suited to youngsters around age 10-12, it would make a good beginning resource for homeschoolers (though probably not if they're anti-evolutionists) as well as a useful supplement to conventional schoolwork. Beginning with the theory of how the solar system came to be, it goes on to combine natural history, geology, meteorology, and the history of humanity in a sensibly blended way that shows how they relate to one another. The information-filled and often dramatic (a hurricane, a thunderstorm, a tornado, a volcano in eruption) or beautiful (craggy mountain scenes, the Ganges, a lush rainforest scene) paintings and clear, unique diagrams add immeasurably to the book's value. I always think that a book is worth my time if it provides information I can't find anywhere else, and this one does. What's more, adults can enjoy it as a basic text on its subject without feeling they're being talked down to. Take a chance on it; I doubt you'll regret it.

- This is the most nasty Catholic bashing novel I have ever read. There must be a better way to get an opinion accross.
