This introduction to circuit design is unusual in several respects. First, it offers not just explanations, but a full course. Each of the twenty-five sessions begins with a discussion of a particular sort of circuit followed by the chance to try it out and see how it actually behaves. Accordingly, students understand the circuit's operation in a way that is deeper and much more satisfying than the manipulation of formulas. Second, it describes circuits that more traditional engineering introductions would postpone: on the third day, we build a radio receiver; on the fifth day, we build an operational amplifier from an array of transistors. The digital half of the course centers on applying microcontrollers, but gives exposure to Verilog, a powerful Hardware Description Language. Third, it proceeds at a rapid pace but requires no prior knowledge of electronics. Students gain intuitive understanding through immersion in good circuit design.

#### **REVIEW OF ENGINEERING ELECTROMAGNETICS BY WILLIAM HAYT 7TH EDITION**

- As a continuum to Henry Miller's chapter about Hilaire Hillel in The Air-Conditioned Nightmare he makes a brilliantly articulate contribution to this book in letter form. His analyses of Hilaire Hillel's murals and paintings in San Francisco is strong as a literary achievement and art criticism. Saroyan's essay is equally as staggering with its prose like quality, and when these two twentieth century greats are stacked beside the painter

himself a full compositional portrait is made.

- "When You Ride Alone," is exactly what you'd expect from comedian Bill Maher: it is crude, funny, irreverent and thought-provoking. Maher's book is deliberately intended to parallel the calls to sacrifice and resolve that were evident during World War II. Artists have has reworked famous WWII posters and slogans ("Loose Lips Sink Ships," "I Want YOU!" and the title poster that substitutes Osama for Hitler) to give the war on terror the same significance and urgency that citizens were urged to feel when faced with fascist aggression. Unfortunately, many of the issues that Maher raised are still relevant today, 3 years after the the September 2001 terror attacks. Americans have not been asked to sacrifice. Other than a few thousand soldiers killed or wounded, most Americans continue in the same habits of mind and body that feed the terror networks. We know little about the culture of the Islamic world. We still buy oil-guzzling SUVs and we still burn electricity with reckless abandon, regardless of how these habits indirectly help finance oil-producing nations, which (in case one isn't aware of it) bred the fanatics who attacked us. We are still satisfied with slogans and posturing (placing flag decals on our cars rather than voting) that have no effect on our preparedness. It's frightening how Maher's snapshot of our national security has hardly changed in 3 years. Security at our airports, ports and borders is still dangerously porous. Other than pre-emption, our leaders have offered no new vision of independence from our enemies. We greedily accept tax breaks rather than beefing up the emergency services that saved us on September 11. Not that I am on board with all of Maher's thought. He comes across as anti-religious, though his real problem (rightly enough) is that a literal reading of scriptures (anyone's scriptures!) is dangerous. He also seems a bit too fond of racial and ethnic profiling to protect us from terrorists. (If we stop frisking grandmothers at airports, won't terrorist just dress as grandmas?) The book's subtitle, "What the Government SHOULD Be Telling Us to Help Fight the War on Terrorism" is still apt in late 2004. That makes this book prophetic, but it also ought to scare the wits out of anyone who loves freedom and security.
