The National Fire Protection Association (NFPA) and the International Association of Fire Chiefs (IAFC) are pleased to bring you Fire Apparatus Driver/Operator: Pump, Aerial, Tiller, and Mobile Water Supply, Third Edition. This third edition of Fire Apparatus Driver/Operator has been thoroughly updated to serve as a complete training solution that addresses pump operation, safe driving techniques, tiller and aerial apparatus operation, and water supply considerations. From basic apparatus maintenance to fire pump theory and advanced hydraulic calculations, this single manual covers everything a fire service driver/operator needs to know. Fire Apparatus Driver/Operator: Pump, Aerial, Tiller, and Mobile Water Supply, Third Edition meets and exceeds the job performance requirements (JPRs) of Chapters 4, 5, 6, 7, and 10 of the 2017 Edition of NFPA 1002, Fire Apparatus Driver/Operator Professional Qualifications. In the 2017 edition, the requirement that a Driver/Operator be certified to the Fire Fighter I level was removed. However, JPRs from NFPA 1001, Standard for Fire Fighter Professional Qualifications have been added so driver/operators who operate pumpers and mobile water supply apparatus are able to operate outside of the immediate dangers to life and health (IDLH) but still have an understanding of the following Fire Fighter I topics: Fire Department Communications (NFPA 1001: 5.2.1, 5.2.2, 5.2.3) The General Knowledge Requirements (NFPA 1001: 5.1.1) Responding on an Apparatus to an Emergency Scene (NFPA 1001: 5.3.2) Connect a Fire Department Pumper to a Water Supply (NFPA 1001: 5.3.15) Additional appendices include the excerpt of NFPA 1002 and corresponding correlation matrixes to substantiate all JPRs that are covered and documented. Comprehensive and updated content in this edition includes: Nozzle reaction and how to calculate it Expanded coverage of pump anatomy and pressure control devices Content that addresses vital parts of NFPA 1901, Standard for Automotive Fire Apparatus and NFPA 1911, Standard for the Inspection, Maintenance, Testing, and Retirement of In-Service Automotive Fire Apparatus. Appendix A: Daily/Weekly Inspection Check Sheet, that provides a comprehensive overview on what to inspect and how to ensure your apparatus is at operational readiness.

The 2010 International Conference on Life System Modeling and Simulation (LSMS 2010) and the 2010 International Conference on Intelligent Computing for Sustainable Energy and Environment (ICSEE 2010) were formed to bring together researchers and practitioners in the fields of life system modeling/simulation and intelligent computing applied to worldwide sustainable energy

and environmental applications. A life system is a broad concept, covering both micro and macro components ranging from cells, tissues and organs across to organisms and ecological niches. To comprehend and predict the complex behavior of even a simple life system can be extremely difficult using conventional approaches. To meet this challenge, a variety of new theories and methodologies have emerged in recent years on life system modeling and simulation. Along with improved understanding of the behavior of biological systems, novel intelligent computing paradigms and techniques have emerged to handle complicated real-world problems and applications. In particular, intelligent computing approaches have been valuable in the design and development of systems and facilities for achieving sustainable energy and a sustainable environment, the two most challenging issues currently facing humanity. The two LSMS 2010 and ICSEE 2010 conferences served as an important platform for synergizing these two research streams.

This important new manual goes beyond the published NFPA standards on installation of standpipe systems to include the rules in the International Building Code, municipal fire codes, the National Fire Code of Canada, and information on inspection, testing, and maintenance of standpipe systems. Also covered are the interactions between standpipe and sprinkler systems, since these important fire protection systems are so frequently installed together. Illustrated with design examples and practical applications to reinforce the learning experience, this is the go-to reference for engineers, architects, design technicians, building inspectors, fire inspectors, and anyone that inspects, tests or maintains fire protection systems. Fire marshals and plan review authorities that have the responsibility for reviewing and accepting plans and hydraulic calculations for standpipe systems are also an important audience, as are firefighters who actually use standpipe systems. As a member of the committees responsible for some of these documents, Isman also covers the rules of these standards and codes as they are written, but also provides valuable insight as to the intent behind the rules. A noted author and lecturer, Professor Isman was an engineer with the National Fire Sprinkler Association (NFSA), is an elected Fellow of the Society of Fire Protection Engineers (SFPE), and currently Clinical Professor in the Department of Fire Protection Engineering at University of Maryland. /div

The Design and Layout of Fire Sprinkler Systems, Second Edition  
NFPA 20 Standard for the Installation of Stationary Pumps for Fire Protection Agents' and Inspectors Pocket-book of Fire Protection Operation of Fire Protection Systems

Although effective fire sprinkler systems are crucial to public safety, for years, the designers of those systems had few published resources to reference and guide them through their design processes. The first edition of this book changed all that, and now The Design and Layout of Fire Sprinkler Systems Second Edition suits their needs even better. Written and thoroughly updated by a fire prevention engineer with more than 20 years of experience, this book provides a complete, systematic introduction to automatic fire sprinkler design and layout, from design basics, code requirements, and pipe hanging to hydraulic

calculations, retrofits, and details on fire pumps. The author carefully outlines all of a designer's responsibilities and includes an entire chapter dedicated to preparing for the NICET exam. More than 150 sample diagrams, checklists, sample forms, spec sheets, photographs, and a glossary complement the text, and the larger page size of this edition permits clear presentation of diagrams and schematics. The Design and Layout of Fire Sprinkler Systems not only builds the foundation and skills of newcomers to the field, but also provides an outstanding reference for fire safety professionals, building inspectors, insurance underwriters, and municipal officials.

The modern definition of firefighter no longer means "putting the wet stuff on the red stuff." Emergency responders answer incidents ranging from fire alarm activations to elevator rescues and medical emergencies more often than full-blown fires. Consequently, responders increasingly interface with a wide array of building systems. Underscoring the changing role of firefighters, Fire Protection: Systems and Response presents the basic knowledge of the inner workings of fire safety/fire protection systems and related equipment in buildings. The author provides a straightforward overview of the functions and benefits of these systems and how they can assist with fire suppression, code enforcement, alarm response, and elevator rescue. The book's comprehensive discussion of elevators, fire command centers, emergency generators and lighting, and HVAC systems sets it apart from other fire protection books currently available. The topics covered prepare emergency response personnel for the challenges they face working with fire protection systems, fire alarm systems, and elevators. Logically organized, clearly written, and covering all systems in a single text, this presentation of information streamlines fire service interaction with building features and fire protection systems. Providing an understanding of how systems are designed and installed, the book is also a reference for troubleshooting fire protection problems in the field. The information not only gives responders an appreciation/knowledge of how the systems work, but helps them use this knowledge to perform their job better.

## REVIEW OF SIZING RECOMMENDATIONS FOR FIRE PUMP APPLICATIONS

- I love both genealogy and mystery novels, so was tickled to find a book that combines the two. What I didn't expect was such a sympathetic protagonist -- a middle-aged woman who literally wakes up one day to realize that, having lived to care for children, husband and aged relatives, she is suddenly in a position to "live for herself," and she isn't sure just how she wants to go about that! Katharine also reacts surprisingly (for a mystery novel!) realistically to the events with which she is confronted... if

she goes to question someone, it is because the author provides her with a legitimate reason to do so, not just because she is nosy and it is the only way to advance the story. I mean, don't you sometimes get tired of the amateur sleuth that shows up on the doorstep of a complete stranger to question him even though it's none of her business, and dangerous, besides? Also, Katharine shows some actual emotional maturity in her relationships and observations about others that is very refreshing... just because she's been a homemaker most of her life doesn't mean she is

naive or empty-headed, a novel approach. I love Katharine Murray and can't wait to find out what she does next... do we really have to wait a whole YEAR, Ms. Sprinkle????

- The solutions are great, if only they worked in real life and not in theory!. The Auto Deploy just doesn't work (returns an error that there is not information for!) and the Application Settings writer is great in theory but in reality it's easier to use the registry setting to achieve and easier to implement the result in a large scale development.... Conclusion... don't waste your money...
