REVIEW OF COMPUTER ARCHITECTURE QUESTIONS AND ANSWERS OBJECTIVES

- My email to the author (mailto:salhir@earthlink.net) follows:Its rarely that I email an author about negative review. But this time through I am pretty sure it may be a good idea. So here goes.....I read only a short part of the book before I gave up because I found your style of presentation rather

obscure and unreadable. The bulleted lists that make up most of the prose in the text are hard to read without a contextual commentary. The diagrams seem ****really**** interesting but unfortunately there is no discussion about the diagrams and their contexts. The diagrams are labeled but that still doesn't explain them well. I am hoping you get a chance to revise this book and correct some of this. Simply put- It seems to me like you have taken your personal notes (bulleted lists) and slapped them together with your diagrams to make this book. See what most of the other reviewers of your text at Amazon.com have to say. I find it surprising that O'Reilly didn't find this to be a problem with the book Sorry that this is such a negative review but this is with a hope that next revision improves Jaideep (All the above are my views not my employer's views)

- I thought this book would be up to the usual O'Reilly standards. I was wrong. Don't bother. UML In a Nutshell should be about half its current size. It's full of verbiage that doesn't really add anything. The book should "cut to the chase" and get stuff accomplished upfront, rather than wax philosophical in bureaucratese for the first three chapters. Bits like "The problem occurs within a business context (domain or space). The solution must be realized to fit within the organization's information technology infrastructure (domain or space)." [p16] should be taken out and shot with the bullets from the neighboring pages. I mean really, who cares (domain or space)? You can open this book at random and find pretty much the same kind of writing. Sorry. At least it wasn't that expensive (domain or space).
