REVIEW OF INTERVIEW QUESTIONS EMBEDDED

FIRMWARE DEVELOPMENT ENGINEER

- Someone once described history as "one damn thing after another," and sometimes the way history is taught might make it seem that way. Diamond's approach is to look for patterns. His particular focus, both in this book and in *Guns, Germs and Steel*, is to look at the human-environmental interaction. In this book he mentions a few times that he is not an economic determinist, although in his previous book he gave the impression that the rise of the West is largely due to environmental factors. In the present book he shows how a set of environmental factors creates a challenge and that the response to that challenge can make the difference between a society that flourishes and one that falls apart. I must confess at this point that I have not read the entire book. At some point I skipped the earlier histories to read about the present. At 500 pages of tightly written but nevertheless readable facts and figures the book gives a bit more than I care to know about such things as the cultural relationships in Norse Greenland. Still it must be said that the methodology is rather interesting. Diamond shows how archaeologists and scientists can recreate the history of a people even when there are no written records. I admire the energy expended in piecing together all the information and urge you to read through at least some of the case histories. The tone of the book is cautionary but hopeful. The message is that we are facing very serious global environmental problems and that, based on the historical evidence, can either ignore the problems to our great peril or else collectively respond to them to our mutual benefit.

- Truly a must read. This book will not make you feel warm and fuzzy. It is simply an honest, well organized, and devastatingly honest look at what humans are doing to the planet and to themselves. I think this should be a required reading of politicians and policy makers.
